Pass Guaranteed Quiz 2026 Nutanix Reliable NCP-MCI-7.5: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Dumps Discount

BTW, DOWNLOAD part of Real4dumps NCP-MCI-7.5 dumps from Cloud Storage: https://drive.google.com/open?id=1ZSRVgjBy_1wCcGW2V71K_Bl1wegLR7uh

If you cannot complete the task efficiently, we really recommend using NCP-MCI-7.5 learning materials. Through the assessment of your specific situation, we will provide you with a reasonable schedule, and provide the extensible version of NCP-MCI-7.5 exam training you can quickly grasp more knowledge in a shorter time. In the same time, you will do more than the people around you. This is what you can do with NCP-MCI-7.5 Test Guide. Our NCP-MCI-7.5 learning guide is for you to improve your efficiency and complete the tasks with a higher quality. You will stand out from the crowd both in your studies and your work. The high quality of NCP-MCI-7.5 exam training is tested and you can be assured of choice.

Nutanix NCP-MCI-7.5 Exam Syllabus Topics:

Section	Weight	Objectives
Cluster Management	25%	- Deploy and configure clusters • 1. Cluster creation and expansion • 2. Node management and lifecycle operations • 3. License installation and management - Networking configuration • 1. AHV networking components • 2. Bond modes and network segmentation • 3. Flow network security policies - Storage configuration • 1. Storage containers and policies • 2. Volume groups and file services • 3. Deduplication, compression and erasure coding

VM Management	25%	- Migration and mobility • 1. Live migration operations • 2. Affinity and anti-affinity rules • 3. VM migration methods - VM lifecycle operations • 1. Guest customization • 2. VM snapshots and clones • 3. Start, stop and delete VMs - VM deployment and configuration • 1. VM hardware and boot settings • 2. Create, clone and modify VMs • 3. Categories, projects and permissions
Disaster Recovery and Data Protection	20%	- Business continuity planning • 1. RTO and RPO requirements • 2. Cluster and site resilience - Backup and snapshot management • 1. Recovery point objectives • 2. File and object recovery • 3. Snapshot policies and retention - Replication and disaster recovery • 1. Remote protection domains • 2. Failover and failback operations • 3. Consistency groups
Monitoring and Troubleshooting	20%	- Health and performance monitoring • 1. Performance charts and metrics • 2. Alerts and notifications • 3. Capacity planning and analysis - Security and access control • 1. Role-based access control • 2. Audit logs and compliance - Troubleshooting methodology • 1. LCM and upgrade troubleshooting • 2. Common issues and resolution • 3. Log collection and analysis
Advanced Operations	10%	- Automation and APIs • 1. CLI operations • 2. REST API usage - Prism Central administration • 1. Multi-cluster management • 2. Reports and dashboards

Hot NCP-MCI-7.5 Dumps Discount | Authoritative NCP-MCI-7.5 Pass4sure Exam Prep and Updated Authorized Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Certification

Nutanix NCP-MCI-7.5 training materials have won great success in the market. Tens of thousands of the candidates are learning on our NCP-MCI-7.5 practice engine. First of all, our Nutanix NCP-MCI-7.5 study dumps cover all related tests about computers. It will be easy for you to find your prepared learning material. If you are suspicious of our NCP-MCI-7.5 Exam Questions, you can download the free demo from our official websites.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q21-Q26):

NEW QUESTION # 21
An administrator has been asked to deploy a single-node Prism Central VM, with the possibility to scale out to increase its capacity. What is the minimum supported Prism Central size?

- A. X-Large
- B. Large
- C. Small
- D. X-Small

Answer: C

Explanation:
Nutanix documentation for Prism Central deployment states that single Prism Central VM deployments are supported in Small, Large, or X-Large sizes, and that a single-VM deployment can later be scaled out. Since X-Small is not the supported minimum deployment size in this documented model, the minimum supported size is Small. That makes A correct.
This question is really checking whether the administrator understands the starting point for a scale-out- capable Prism Central design. The existence of larger sizes does not change the minimum supported entry point. Nutanix's documentation is explicit that a single Prism Central VM can begin at Small and later be expanded if more scale or resiliency is needed. Therefore, for a single-node Prism Central deployment with future scale-out potential, the correct answer is Small.

NEW QUESTION # 22
A company needs to comply with a new company policy requiring the use of an external, cloud based, recovery point location. To accomplish this task, an administrator needs to strengthen the Disaster Recovery configurations.
What is the most cost-efficient option?

- A. Add a new NC2 Recovery Location.
- B. Connect to DraaS domain availability zone type.
- C. Enable Multicloud Snapshot Technology.
- D. Create a runbook to clone recovery points to an S3 Bucket.

Answer: C

Explanation:
Nutanix documentation describes Multicloud Snapshot Technology (MST/NMST) as a way to replicate native Nutanix snapshots directly to cloud object storage such as AWS S3 or Azure Blob, and specifically positions it as a cost-effective disaster recovery and data mobility approach. Nutanix best-practice content also says MST is especially suitable when an organization does not want to maintain a full secondary DR site and is looking for a low-cost recovery-point location in the cloud. That aligns exactly with the requirement in this question. (portal.nutanix.com , portal.nutanix.com , portal.nutanix.com) Adding an NC2 recovery location or full DRaaS design can be valid but usually carries more infrastructure cost than simply replicating snapshots to object storage. A custom runbook to clone recovery points to S3 is not the native Nutanix DR method being tested. So for an external cloud-based recovery point location with cost efficiency as the deciding factor, A is the authentic answer.

NEW QUESTION # 23
An administrator configures network segmentation and places the Data Services IP (DSIP) in a secondary non- routable subnet while the cluster is registered to Prism Central. Prism Central cannot initiate or complete cluster upgrades. How should the administrator resolve this issue?

- A. Configure an additional DSIP within the original subnet used for PC communication.
- B. Disable segmentation on the local cluster until the next upgrade cycle.
- C. Enable proxy ARP within the Nutanix VLAN to establish reachability.
- D. Use a single uplink because segmented networks do not tolerate redundancy.

Answer: A

NEW QUESTION # 24
An administrator decided to simplify volume group management by automatically enabling vDisk load balancing for better performance.
How can the administrator enabled vDisk load balancing by default for volume groups?

- A. Attach no more than 16 load balanced volume groups per guest VM.
- B. Use the data services IP address for attached volume groups.
- C. For Linux VMs ensure the SCSI device timeout is no more than 30 seconds.
- D. Directly attach vDisk load balanced volume groups to VMs.

Answer: B

Explanation:
Nutanix documentation for enabling load balancing of vDisks in a volume group states that vDisk load balancing is enabled by default for volume groups attached to VMs by using a Data Services IP address. That is the exact behavior this question asks about: how to make load balancing happen by default rather than managing it manually each time. Therefore D is the correct answer. (portal.nutanix.com , portal.nutanix.com) The other answers may relate to supported limits or guest best practices, but they do not describe the default- enablement mechanism. Nutanix intentionally ties this behavior to the DSIP-based attachment model, which simplifies pathing and discovery while automatically enabling the balancing behavior. So for a study guide aligned to Nutanix docs, D is the authentic answer.

NEW QUESTION # 25
An administrator needs to configure OpenLDAP in Prism Central.
Which type of account should the administrator use?

- A. Service Account
- B. Nutanix Account
- C. Root Account
- D. Admin Account

Answer: A

Explanation:
Nutanix security documentation for configuring OpenLDAP authentication in Prism Central clearly states that Prism Central uses a service account to query the OpenLDAP directory and that this service account must have the required read permissions on the directory service. That means the correct account type is not a generic admin, root, or Nutanix local account, but a dedicated service account created for the integration.
Therefore D is the authentic answer.
This is an important design principle in Nutanix authentication integration. A service account is preferred because it supports controlled, non-interactive access with appropriate least-privilege permissions and stable directory lookup behavior. Using a root or broad admin account would be poor security practice and is not how Nutanix documents the setup. The service account's role is not to log into Prism as a user but to let Prism Central query the directory safely and consistently. Because the official documentation names that account type directly, D. Service Account is the correct exam answer.

NEW QUESTION # 26
.....

The Real4dumps product here is better, cheaper, higher quality and unlimited for all time; kiss the days of purchasing multiple Nutanix braindumps repeatedly, or renewing NCP-MCI-7.5 training courses because you ran out of time. Now you can learn NCP-MCI-7.5 skills and theory at your own pace and anywhere you want with top of the NCP-MCI-7.5 braindumps, you will find it's just like a pice a cake to pass NCP-MCI-7.5exam.
