

Authoritative IDP Reliable Exam Vce - Find Shortcut to Pass IDP Exam

I would like to inform you that you are coming to a professional site engaging in providing valid IDP dumps torrent materials. We are working on R & D for IT certification many years, so that most candidates can clear exam certainly with our IDP dumps torrent. Some of them can score more than 90%. Some candidates reflect our dumps torrent is even totally same with their real test. If you want to try to know more about our IDP Dumps Torrent, our free demo will be the first step for you to download.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severitylikelihoodconsequence factors, risk prioritization, score reduction, and configuring security goals and scopes.
Topic 2	<ul style="list-style-type: none">Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 3	<ul style="list-style-type: none">User Assessment: Examines user attributes, differences between usersendpointsentities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.
Topic 4	<ul style="list-style-type: none">Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 5	<ul style="list-style-type: none">GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 6	<ul style="list-style-type: none">Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 7	<ul style="list-style-type: none">Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.

Topic 8	<ul style="list-style-type: none"> • Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 9	<ul style="list-style-type: none"> • Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 10	<ul style="list-style-type: none"> • Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.
Topic 11	<ul style="list-style-type: none"> • Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

CrowdStrike IDP Questions 2026 - All Subjects Covered

There is no doubt that having a IDP certificate is of great importance to our daily life and daily work, it can improve your comprehensive strength when you are seeking for a decent job or competing for an important position, mainly because with IDP certification, you can totally highlight your resume and become more confident in front of your interviewers and competitors. There are many advantages of our IDP question torrent that we are happy to introduce you and you can pass the exam for sure.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which of the following are minimum requirements for showing the Falcon Identity Verification Dialog on the end user's machine?

- A. Windows Vista and .NET 3.5
- **B. Internet Explorer 9 and Windows Server 2008**
- C. Windows Server 2008 and PowerShell 5.1
- D. .NET 3.5 and PowerShell 5.1

Answer: B

Explanation:

The Falcon Identity Verification Dialog is used to prompt users for identity verification during conditional access enforcement. According to the CCIS curriculum, Internet Explorer 9 and Windows Server 2008 represent the minimum supported requirements for rendering the Identity Verification Dialog on an end user's system.

This requirement exists because the dialog relies on supported browser and OS components to present authentication challenges reliably during enforcement workflows. Systems that do not meet these minimum requirements may fail to display the dialog correctly, impacting the enforcement of MFA or identity verification actions.

The other options reference runtime frameworks or PowerShell versions that are not directly responsible for rendering the verification dialog. Therefore, Option A is the correct and verified answer.

NEW QUESTION # 56

Which of the following MFA providers are NOT supported by Falcon Identity?

- A. Azure (Entra) MFA
- B. Symantec VIP
- **C. Firebase**
- D. DUO

Answer: C

Explanation:

Falcon Identity Protection integrates with a defined set of supported MFA providers to enforce identity verification and conditional access based on identity risk. According to the CCIS curriculum, supported MFA providers include Azure (Entra) MFA, Cisco Duo, and Symantec VIP, which are commonly used enterprise-grade MFA solutions.

These integrations allow Falcon Identity Protection to evaluate authentication attempts and dynamically enforce MFA challenges when risky behavior is detected. The supported providers expose the necessary APIs and authentication workflows required for Falcon to trigger MFA challenges as part of Policy Rules and Zero Trust enforcement.

Firebase is not a supported MFA provider within Falcon Identity Protection. Firebase is primarily a mobile and application development platform and does not function as an enterprise MFA provider compatible with Falcon's identity enforcement model. As such, it cannot be used to enforce conditional access or identity verification through Falcon Identity Protection.

Because Falcon only supports specific, enterprise MFA integrations validated by CrowdStrike, Option A is the correct and verified answer.

NEW QUESTION # 57

Where in the Identity Protection module can one view the monitoring status of domain controllers?

- A. Settings
- B. System Notifications
- C. Connectors
- **D. Domains**

Answer: D

Explanation:

In Falcon Identity Protection, the Domains page is where administrators can view the monitoring and health status of domain controllers. The CCIS curriculum explains that this page provides visibility into which domain controllers are actively reporting authentication traffic, their inspection status, and whether Authentication Traffic Inspection (ATI) is enabled.

This view is essential for validating coverage and ensuring that Falcon Identity Protection has sufficient visibility into domain authentication activity. Administrators can quickly identify gaps, such as domain controllers that are not reporting or are misconfigured, and take corrective action.

The other options serve different purposes:

- * Settings manage general configuration.
- * System Notifications display alerts and messages.
- * Connectors manage integrations such as MFA and IDaaS.

Because domain controller visibility and monitoring health are managed at the domain level, Option C (Domains) is the correct and verified answer.

NEW QUESTION # 58

What trigger will cause a Falcon Fusion Workflow to activate from Falcon Identity Protection?

- A. New endpoint detection
- B. New incident
- **C. Alert > Identity detection**
- D. Spotlight user action > Host

Answer: C

Explanation:

Falcon Fusion workflows integrate directly with Falcon Identity Protection through identity-based triggers, allowing automated responses to identity threats. The correct trigger that activates a Falcon Fusion workflow from Identity Protection is Alert > Identity detection.

Identity detections are generated when Falcon observes suspicious or malicious identity behavior, such as credential abuse, abnormal authentication patterns, lateral movement attempts, or policy violations related to identity risk. These detections are distinct from endpoint-only detections or incidents and are specifically designed to represent identity-based attack activity.

While New incident and New endpoint detection are valid Falcon Fusion triggers in other Falcon modules, they are not the primary triggers for identity-focused automation. Similarly, Spotlight user action > Host relates to vulnerability management workflows rather than identity analytics.

The CCIS curriculum emphasizes that Falcon Fusion enables automated identity response, such as notifying security teams, disabling accounts, enforcing MFA, or triggering SOAR actions, based on identity detections. Therefore, workflows tied to Alert > Identity detection allow organizations to respond quickly and consistently to identity threats, making Option C the correct answer.

NEW QUESTION # 59

What setting can be switched under the Domain Security Overview for each Active Directory domain and/or Azure tenant?

- A. Domains
- B. Privileged Identities
- C. Goal
- **D. Scope**

Answer: D

Explanation:

In the Domain Security Overview, Scope is a configurable setting that allows administrators to switch between Active Directory domains and Azure tenants. This capability is essential for organizations managing multiple identity environments, as it enables targeted risk assessment and comparison across different identity infrastructures.

The CCIS documentation explains that Scope determines which domain or tenant's identity data is displayed in the Overview dashboard, including risk scores, trends, and prioritized remediation guidance.

Changing the scope does not alter risk calculations; it simply refocuses the analysis on the selected identity environment.

Other options are incorrect because:

- * Privileged Identities represent a subset of users, not a switchable setting.
- * Domains are entities, not a dashboard control.
- * Goal changes how risks are evaluated, not which environment is displayed.

By allowing granular control over which domain or tenant is analyzed, Scope supports accurate identity risk management in complex, hybrid environments. Therefore, Option D is the correct answer.

NEW QUESTION # 60

.....

We've always put quality of our IDP guide dumps on top priority. Each IDP learning engine will go through strict inspection from many aspects such as the operation, compatibility test and so on. The quality inspection process is completely strict. The most professional experts of our company will check the IDP study quiz and deal with the wrong parts. That is why we can survive in the market now. Our company is dedicated to carrying out the best quality IDP study prep for you.
