Certification Dumps: A certification dump is a collection of test questions and answers used to prepare for an IT certification exam. The questions and answers are often obtained from an official source, such as a book, an exam preparation website, or an instructor's guide.

Education Articles: Education articles discuss different aspects of learning, teaching, and assessment. They cover topics such as new teaching methods, curriculum development, special education, assessment strategies, educational psychology, classroom management, and more. They can also provide insight into issues such as parent engagement and the challenges facing the education system.

Articles: Art articles focus on the artistic aspects of various topics such as cultures, history, literature, film, music, visual art, and more. They can provide insight on contemporary or historical art movements, highlight creative works, provide commentary on certain art forms or trends, or discuss art criticism or theory.

P.S. Free & New JN0-637 dumps are available on Google Drive shared by Test4Cram: <https://drive.google.com/open?id=1BMkiLeK0UiYkPeq2HDQvXVK6EI29Ej>

JN0-637 training materials are famous for high quality, and we have received many good feedbacks from our customers. JN0-637 exam materials are compiled by skilled professionals, and they possess the professional knowledge for the exam, therefore, you can use them at ease. In addition, JN0-637 training materials contain both questions and answers, and it's convenient for you to have a check after practicing. You can receive download link and password within ten minutes after paying for JN0-637 Exam Braindumps, it's convenient. If you don't receive, you can contact us, and we will solve this problem for you as quickly as possible.

We want to finish long term objectives through customer satisfaction and we have achieved it already by our excellent JN0-637 exam questions. In this era of cut throat competition, we are successful than other competitors. What is more, we offer customer services 24/7. Even if you fail the exams, the customer will be reimbursed for any loss or damage after buying our JN0-637 Guide dump. One decision will automatically lead to another decision, we believe our JN0-637 guide dump will make you fall in love with our products and become regular buyers.

2026 Professional JN0-637 – 100% Free Actual Exams | Vce JN0-637 Download

For candidates who are going to attend the exam, the right JN0-637 study materials are really important, since it will decide whether you will pass the exam or not. JN0-637 exam dumps are high-quality, and it will improve your professional ability in the process of learning, since it contains many knowledge points. Besides, about the privacy, we respect the private information of you. We won't send you junk email. Once you have paid for the JN0-637 study materials, we will send you the downloading link in ten minutes. You can start your learning immediately.

Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.
Topic 2	<ul style="list-style-type: none">• Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.
Topic 3	<ul style="list-style-type: none">• Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.
Topic 4	<ul style="list-style-type: none">• Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.
Topic 5	<ul style="list-style-type: none">• Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q114-Q119):

NEW QUESTION # 114

You have deployed two SRX Series devices in an active/passive multinode HA scenario. In this scenario, which two statements are correct? (Choose two.)

- A. Services redundancy group 0 (SRG0) is used for services that do not have a control plane state.
- B. Services redundancy group 1 (SRG1) is used for services that do not have a control plane state.
- C. Services redundancy group 0 (SRG0) is used for services that have a control plane state.
- D. Services redundancy group 1 (SRG1) is used for services that have a control plane state.

Answer: A,C

Explanation:

In a Juniper SRX high-availability (HA) scenario, redundancy is achieved through the use of redundancy groups. Redundancy groups are assigned to control specific functions in an active/passive setup. The HA configuration uses redundancy groups to manage failover between the two SRX nodes.

* SRG0 (Services Redundancy Group 0):

* Correct: Option B: SRG0 is used for control plane functions like routing engine redundancy.

This group manages the Routing Engine (RE) failover and ensures that routing decisions continue seamlessly during failovers.

* Correct: Option C: SRG0 is also responsible for services without control plane states. These services can include lower-level services such as packet forwarding and stateful firewall services.

SRG0 handles both critical and basic functions since control plane elements are essential for network operations during failover events.

* SRG1 (Services Redundancy Group 1):

* SRG1, contrary to SRG0, is typically used for data plane services and does not manage control plane state. It handles services like security policies, NAT, and VPN functions but does not involve control plane redundancy.

Juniper References:

* Juniper SRX HA Documentation: The role of redundancy groups in HA, detailing that SRG0 is reserved for the most crucial services, including control plane failover and basic packet forwarding.

NEW QUESTION # 115

How does an SRX Series device examine exception traffic?

- A. The device examines the host-inbound traffic for the egress interface and zone.
- B. The device examines the host-outbound traffic for the ingress interface and zone.
- C. The device examines the host-inbound traffic for the ingress interface and zone.
- D. The device examines the host-outbound traffic for the egress interface and zone.

Answer: C

Explanation:

Exception traffic, including management and control plane traffic, is handled by examining host-inbound traffic configurations at the ingress interface and zone. It ensures traffic reaches necessary services like SSH and IKE securely. See Juniper Host Inbound Traffic Documentation for more.

SRX Series devices handle exception traffic (such as management traffic like SSH, Telnet, DNS queries, etc.) differently than regular transit traffic. Exception traffic is examined based on host-inbound traffic for the ingress interface and zone. If traffic is destined for the device itself (e.g., management traffic or routing protocol messages), it must be allowed as host-inbound traffic on both the ingress interface and zone.

Example Command:

bash

Copy code

```
set security zones security-zone trust host-inbound-traffic system-services ssh
```

This ensures that traffic destined to the SRX device is inspected based on the ingress interface and zone.

NEW QUESTION # 116

Your company wants to use the Juniper SecIntel feeds to block access to known command and control servers, but they do not want to use Security Director to manage the feeds.

Which two Juniper devices work in this situation? (Choose two)

- A. QFX Series devices
- B. EX Series devices
- C. SRX Series devices
- D. MX Series devices

Answer: C,D

NEW QUESTION # 117

You have deployed automated threat mitigation using Security Director with Policy Enforcer, Juniper ATP Cloud, SRX Series devices, and EX Series switches.

In this scenario, which device is responsible for blocking the infected hosts?

- A. Juniper ATP Cloud
- B. Policy Enforcer
- C. EX Series switch
- D. Security Director

Answer: B

Explanation:

Policy Enforcer interacts with other network elements like EX switches to enforce blocking of infected hosts based on threat intelligence from ATP Cloud and other sources.

In a Juniper automated threat mitigation setup involving Security Director, Policy Enforcer, Juniper ATP Cloud, SRX Series, and EX Series switches, the Policy Enforcer is the component responsible for blocking infected hosts.

NEW QUESTION # 118

You configured two SRX series devices in an active/passive multimode HA setup.

In this scenario, which statement is correct?

- A. Both devices start in a hold state until the activeness determination process is completed.
- B. Both devices are in the passive state until the activeness determination process is completed.
- C. Both devices start in the undiscovered state until the activeness determination process is completed.
- **D. Both devices are in the active state until the activeness determine determination process is completed.**

Answer: D

NEW QUESTION # 119
