Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q98-Q103):

NEW QUESTION # 98

The sole manager of a CRM Analytics app at Cloud Kicks is leaving the company.
What should the CRM Analytics consultant do to ensure the app remains accessible?

- A. Deactivate the user and assign an active one to the app's manager role.
- B. Wait for the CRM Analytics app to auto-assign an active user as its manager.
- C. Assign an active user the app's manager role before the previous manager is deactivated.

Answer: C

Explanation:

To ensure continuity in managing a CRM Analytics app at Cloud Kicks after the current manager leaves, it is critical to proactively assign a new manager. Here's why this is the best approach:

* Role Transition: Assigning a new manager before the current manager's account is deactivated ensures there is no gap in app management, maintaining access and administrative continuity.

* Avoid Disruption: Waiting for an automatic reassignment (which does not typically occur in CRM Analytics) or post-deactivation reassignment could disrupt the management and operation of the app, potentially leading to access issues or administrative challenges.

* Proactive Management: This approach is in line with best practices for CRM system management, where critical roles and responsibilities are transitioned smoothly to avoid any operational disruptions.

NEW QUESTION # 99

A CRM Analytics consultant has prepared a CSV file to be uploaded to CRM Analytics. By mistake, one of the column headers is modified as random non-alphanumeric characters "&*&*&*(%", which went unnoticed prior to uploading the file.
What is the expected behavior of the uploaded CSV column?

- A. The column header is prefixed with "X" upon upload.
- B. The column header is auto-updated to "Column" + column number.
- C. The column header is set to "&*&*&*(%".

Answer: A

Explanation:

When uploading CSV files into CRM Analytics, column headers must follow certain formatting rules.

Headers containing non-alphanumeric characters, such as "&*&*&*(%", will automatically be adjusted.

Specifically, if the column header starts with non-alphanumeric characters or contains such characters, CRM Analytics will prefix the header with "X" to ensure compatibility with internal naming conventions. This behavior ensures that the column can be referenced in the platform without causing errors or conflicts.

NEW QUESTION # 100

A team of CRM Analytics developers has been working on an existing recipe to add new derived fields. The edited version has been failing ever since, and management is requesting that the dashboard show refreshed data while they work on the edits.
How can the developers add new fields while keeping the dataset refreshed?

- A. Clone the existing recipe to add fields and roll back the original recipe to the last working version.
- B. Refresh the dataset after working hours to avoid the edited version from failing.
- C. A recipe for the new fields and when that is successful, add it to the existing recipe as a join node.

Answer: A

Explanation:

When faced with the need to continue refreshing data while developing new features in a recipe, the best practice is:

* Clone the Existing Recipe: By cloning the recipe, developers can experiment with adding new fields and transformations without

affecting the production data flow. This allows for testing and development in a sandbox-like environment.

* Roll Back to a Stable Version: Rolling back the original recipe to the last stable version ensures that the production dashboards continue to receive refreshed data, maintaining business operations without disruption.

This approach not only ensures data continuity but also provides a safe environment to address any issues that may arise from new developments.

NEW QUESTION # 101

A system administrator at Cloud Kicks creates a joined report to showcase the new business deals closing in the current quarter, which was well received by the business stakeholders. A manager wants to visualize this report on CRM Analytics.

The CRM Analytics consultant determines the report can be trended on CRM Analytics, but it's not working as expected.

What is causing the issue?

- A. The Salesforce report was filtered on quarterly data which meant it did not have enough data to trend on CRM Analytics.
- **B. Trending dashboards cannot be created from joined reports.**
- C. The Analytics Integration user did not have permission to view the report on Salesforce.

Answer: B

NEW QUESTION # 102

A versioning feature allows CRM Analytics users to be added as Publishers and make changes separately while a 'Live' version is still being used by other users. Once the changes are complete, the user can then set their updated version as the Live version.

Which CRM Analytics item is this leveraged for?

- A. goats
- **B. App**
- C. Dataset

Answer: B

Explanation:

In CRM Analytics, the versioning feature described is typically leveraged for Apps. This feature allows:

* Parallel Development: Users can work on changes in a separate version without affecting the live version being accessed by others.

* Controlled Publishing: Once changes are finalized, the user can then promote their version to be the new live version, ensuring seamless updates without disrupting ongoing usage.

* Collaborative Workflows: Facilitates teamwork by allowing multiple users to propose and test changes in a controlled environment before making those changes live.

This approach ensures that CRM Analytics apps remain dynamic and can evolve over time while maintaining stability and continuity for end-users.
