220-1202 test braindump, CompTIA 220-1202 test exam, 220-1202 real braindump

It Contains a pool of real CompTIA 220-1202 exam questions. This CompTIA A+ Certification Exam: Core 2 (220-1202)

practice test is compatible with every windows-based system. One downloaded does not require an active internet connection to operate. You can self-evaluate your mistakes after each 220-1102 Practice Exam attempt and work on the weak points that require more attention.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q63-Q68):

NEW QUESTION # 63

A technician needs to disable guest log-ins on domain-joined desktop machines. Which of the following should be used?

- A. Firewall
- B. MSConfig
- C. Group Policy
- D. Microsoft Management Console

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Group Policy is the standard administrative tool for setting user permissions across domain-joined systems.

From QUENTIN DOCTER - COMPLETE Study Guide:

"Use Group Policy to enforce user rights, including disabling guest account access on domain computers."

NEW QUESTION # 64

A technician verifies that a malware incident occurred on some computers in a small office. Which of the following should the technician do next?

- A. Disable System Restore
- B. Educate the end users
- C. Update the anti-malware and scan the computers
- D. Quarantine the infected systems

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Once a malware incident has been confirmed, the immediate next step is to contain the threat. Quarantining infected systems prevents the malware from spreading to other devices and isolates the malicious code for further analysis or remediation.

B: Educating end users is important but occurs later in the incident response process.

C: Disabling System Restore is part of cleanup, not containment.

D: Updating and scanning should occur after the system is quarantined to prevent further infection or spread.

Reference:

CompTIA A+ 220-1102 Objective 2.5: Given a scenario, detect, remove, and prevent malware using appropriate tools and methods.

Study Guide Section: Malware removal best practices - Step 2: Quarantine the infected system

NEW QUESTION # 65

As a corporate technician, you are asked to evaluate several suspect email messages on a client's computer.

Corporate policy requires the following:

>All phishing attempts must be reported.

>Future spam emails to users must be prevented.

INSTRUCTIONS

Review each email and perform the following within the email:

>Classify the emails

>Identify suspicious items, if applicable, in each email

>Select the appropriate resolution

Good afternoon Joe,

I just wanted to thank you for your time during my interview last week. It was exciting to hear about the position and possible opportunity at CompTIA. Please don't hesitate to reach out to me with any questions or concerns you may have about me or my qualifications. Regardless of the outcome, it was a pleasure speaking with you, and I hope to have the opportunity to work with you in the future.

Regards,
Alex

NEW QUESTION # 66

An organization sees unauthorized apps installed and licensing prompts. What should the security team do?

- A. Deploy an internal PKI to filter encrypted web traffic.
- B. Enable stricter UAC settings on Windows.

- C. Remove users from the local admin group.
- D. Implement stronger controls to block suspicious websites.

Answer: C

Explanation:

Removing users from the local admin group prevents them from installing unauthorized software.

From Quentin Docter - Complete Study Guide:

"Local admin privileges allow users to install unauthorized apps. Removing them from this group restricts installations and helps prevent malware."

NEW QUESTION # 67

Which of the following is used in addition to a password to implement MFA?

- A. Sending a code to the user's phone
- B. Verifying the user's date of birth
- C. Requiring the user to enter a PIN
- D. Prompting the user to solve a simple math problem

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Multi-Factor Authentication (MFA) requires at least two different types of authentication factors:

- * Something you know (e.g., password or PIN)
- * Something you have (e.g., smartphone or hardware token)
- * Something you are (e.g., fingerprint or facial recognition)

Option A, sending a code to the user's phone, is an example of "something you have" - a physical device that receives a one-time passcode. Combined with a password, this forms a proper MFA implementation.

B: Date of birth is another knowledge-based factor (like a password), not a second factor type.

C: Solving a math problem is not a recognized authentication factor.

D: A PIN is also "something you know" and does not count as a distinct MFA factor when paired with a password.

Reference:

CompTIA A+ 220-1102 Objective 2.2: Compare and contrast common security measures and authentication technologies.

Study Guide Section: Authentication factors - password, biometrics, tokens, MFA

NEW QUESTION # 68

.....

If you study on our 220-1202 study engine, your preparation time of the 220-1202 exam will be greatly shortened. Firstly, the important knowledge has been picked out by our professional experts. You just need to spend about twenty to thirty hours before taking the Real 220-1202 Exam. Also, our workers have made many efforts on the design of the system. You will never feel bored when you study on our 220-1202 preparation materials. You will find learning can also be a pleasant process.
