

Free CWNP CWDP-305 Pdf Guide | Free CWDP-305 Vce Dumps

BONUS!!! Download part of LatestCram CWDP-305 dumps for free: <https://drive.google.com/open?id=1AenbM9Kd327cLphSj-Kfn9q2BG-dGFXV>

Our web-based practice exam software is an online version of the CWNP CWDP-305 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the CWNP CWDP-305 Certification Exam on the first attempt, our CWNP CWDP-305 practice test software is your best option.

CWNP CWDP-305 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Design the WLAN: This section of the exam measures the skills of a WLAN Design Engineer and covers the process of selecting configurations, architecture types, and wireless components to meet business and technical requirements. It includes using design software, selecting access points and antennas, and applying methodologies such as predictive or measured design. Candidates must demonstrate the ability to produce effective documentation and configure features like QoS, roaming security, and network services for different types of client devices and applications.
Topic 2	<ul style="list-style-type: none">Deploy the WLAN: This section of the exam measures the skills of a WLAN Implementation Specialist and involves overseeing the deployment phase of wireless networks. It focuses on understanding deployment procedures for various WLAN architectures, configuring supporting infrastructure, and verifying proper installation. The section also addresses physical installation checks, documentation handover, and quality assurance practices during ongoing installations.
Topic 3	<ul style="list-style-type: none">Define Specifications for the WLAN: This section of the exam measures the skills of a Wireless Network Planner and focuses on gathering business and technical requirements needed for designing wireless LANs. It includes understanding user needs, regulatory and safety constraints, and environmental factors. Candidates are expected to identify critical elements such as coverage, capacity, security, and device compatibility, and to analyse existing infrastructure and documentation to ensure a successful design strategy.

Topic 4	<ul style="list-style-type: none"> • Validate and Optimize the WLAN: This section of the exam measures the skills of a WLAN Optimization Specialist and assesses the ability to test, validate, and fine-tune wireless networks post-deployment. Key tasks include RF validation surveys, performance testing, troubleshooting connectivity and security issues, and applying appropriate physical or RF adjustments. It also involves client testing and final project handover, including documentation, knowledge transfer, and meetings to ensure long-term WLAN success.

2026 CWDP-305: Marvelous Free Certified Wireless Design Professional Pdf Guide

Our CWNP CWDP-305 study guide is the most reliable and popular exam product in the market for we only sell the latest CWDP-305 practice engine to our clients and you can have a free trial before your purchase. Our CWNP CWDP-305 training materials are full of the latest exam questions and answers to handle the exact exam you are going to face. With the help of our CWDP-305 Learning Engine, you will find to pass the exam is just like having a piece of cake.

CWNP Certified Wireless Design Professional Sample Questions (Q106-Q111):

NEW QUESTION # 106

When viewing channel utilization information from a protocol analyzer, if high channel utilization is occurring, what should you ensure does not exist?

Response:

- A. A high percentage of low PHY rates
- B. High levels of workload
- C. High frames per second
- D. An RF signal generator causing an RF DoS

Answer: A

NEW QUESTION # 107

You are configuring an 802.11ac AP using manual channel planning. The design specification calls for the current AP to be placed on channel 56 in 5 GHz and to disable the 2.4 GHz radio.

For what could the 2.4 GHz radio be used if not standard AP operations?

Response:

- A. PCI DSS encoding
- B. Bluetooth access
- C. Security monitoring
- D. Controller-based channel assignment

Answer: B

NEW QUESTION # 108

As an implementation engineer, you have just received initial design specs from a network designer for your dual-band 802.11n deployment. The network design documents prescribe the following data rate configuration for the 2.4 GHz radio:

Basic Rates: 5.5, 6, 11, 12 Mbps

Supported Rates: 9, 18, 24, 36, 48, and 54 Mbps as well as MCS 0-15

What will result from this design strategy?

- A. Protection mechanisms will always be in use on this network to support 5.5 and 11 Mbps as basic rates.
- B. By disabling support for 1 and 2 Mbps while allowing 5.5 and 11 Mbps, the network will force 802.11b clients to use

these higher data rates.

- C. HR/DSSS (802.11b) stations will not be able to associate to the service set.
- D. This configuration violates the IEEE specification that defines 6, 12, and 24 Mbps as mandatory data rates for 802.11g/n.

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

Including 5.5 and 11 Mbps as basic rates in a mixed 802.11b/g/n network necessitates the use of protection mechanisms, such as RTS/CTS or CTS-to-self, to prevent collisions between legacy 802.11b devices and newer 802.11g/n devices. These mechanisms introduce additional overhead, potentially reducing overall network throughput. Therefore, configuring 5.5 and 11 Mbps as basic rates will result in the constant use of protection mechanisms to maintain compatibility with 802.11b clients.

NEW QUESTION # 109

You conducted a site survey using two USB Wi-Fi adapters with a special driver designed for the site survey software. After deployment, the client devices show lower RSSI values compared to the results from your survey. What is the most likely reason for this discrepancy?

- A. All USB Wi-Fi adapters have a greater sensitivity than internal Wi-Fi adapters
- B. USB Wi-Fi adapters designed for site surveys may have better sensitivity than regular Wi-Fi cards installed in client devices
- C. Regular Wi-Fi cards installed in client devices do not support the same protocols as survey adapters
- D. The transmit power on the APs is higher than needed

Answer: A

NEW QUESTION # 110

A company wants to connect its headquarters to its remote office that is 13 kilometers away using a wireless bridge. What requirement must not be forgotten by their Wireless Engineer when considering the Fresnel Zone?

- A. Receive sensitivity
- B. Antenna gain
- C. Earth bulge
- D. FSPL

Answer: C

Explanation:

When designing a wireless bridge over a distance of 13 kilometers, it's crucial to account for the Earth's curvature, known as the "Earth bulge," which can obstruct the Fresnel Zone and degrade the signal. The Fresnel Zone is an elliptical area around the line of sight between two antennas, and any obstruction within this zone can cause signal diffraction and attenuation.

The CWDP-305 Official Study and Reference Guide highlights this consideration:

"For long-distance point-to-point links, the Earth's curvature becomes a factor, and the Fresnel Zone must be clear of obstructions, including the Earth bulge, to maintain signal integrity." Therefore, when planning such links, engineers must calculate the Fresnel Zone and ensure that the Earth bulge does not intrude into this zone, possibly requiring higher antenna placements or alternative solutions.
