**NEW QUESTION 387**  
An engineer is configuring IEEE 802.1ad on the access port on a new Cisco router. The access port handles traffic from multiple customer VLANs, and it is expected to mark all customer traffic to the same VLAN without dropping any traffic. Which configuration must the engineer apply?  
A. interface gigabitethernet0/0/1 ethernet dot1ad uni s-port  
B. interface gigabitethernet0/0/1 ethernet dot1ad uni c-port  
C. interface gigabitethernet0/0/1 ethernet dot1ad uni mni  
D. interface gigabitethernet0/0/1 encapsulation dot1q 10

Answer: A

**NEW QUESTION 388**  
While an engineer deploys a new Cisco device to redistribute routes from OSPF to BGP, they notice that not all OSPF routes are getting advertised into BGP. Which action must the engineer perform so that the device allows O, OIA, OEE1, and OEE2 OSPF routes into other protocols?  
A. Configure the device to pass only O and E2 routes through it.  
B. Configure the synchronization keyword in the global BGP configuration.  
C. Configure the keyword nssa in the redistribution entry.  
D. Configure the keywords internal and external in the redistribution entry.

Answer: D

**NEW QUESTION 389**  
A company is expanding its existing office space to a new floor of the building, and the networking team is installing a new set of switches. The new switches are running IGMPv2, and the engineers configured them for VLAN10 only. The rest of the existing network includes numerous Layer 2 switches in multiple other VLANs, all running IGMPv3. Which additional task must the team perform when deploying the new switches so that traffic is switched correctly through the entire network?  
A. Configure the new switches to use IGMPv3 on all VLANs on the network.  
B. Configure all switches on the network to support IGMPv2 and IGMPv3 on all VLANs on the network.  
C. Configure the new switches to use IGMPv3 on VLAN10 only.

You have seen Exam4PDF's EMC D-PWF-OE-00 Exam Training materials, it is time to make a choice. You can choose other products, but you have to know that Exam4PDF can bring you infinite interests. Only Exam4PDF can guarantee you 100% success. Exam4PDF allows you to have a bright future. And allows you to work in the field of information technology with high efficiency.

## EMC D-PWF-OE-00 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Protecting PowerFlex Storage: This section covers data protection through snapshot technology for point-in-time copies and volume replication between clusters for disaster recovery.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>PowerFlex Logical Entities: This section focuses on configuring the logical structures within PowerFlex including templates, resource groups, protection domains, fault sets, and storage pools that organize and manage storage resources.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.</li></ul>

## D-PWF-OE-00 Exam Score, Upgrade D-PWF-OE-00 Dumps

When you decide to buy a product, you definitely want to use it right away. Our staffs who are working on the D-PWF-OE-00 exam questions certainly took this into consideration. Many of our worthy customers worried that it will take a long time to get our D-PWF-OE-00 study braindumps, but in fact as long as your payment is successful, we will send a link of the D-PWF-OE-00 learning guide to your e-mail within five to ten minutes. You can download and study with our D-PWF-OE-00 practice engine immediately.

## EMC Dell PowerFlex Operate Exam Sample Questions (Q81-Q86):

### NEW QUESTION # 81

What is the recommended method for performing a fully automated upgrade of a PowerFlex cluster?

- A. Upgrading Metadata Managers first manually
- B. Using the PowerFlex Manager Lifecycle Management (LCM) feature
- C. Manual node-by-node upgrades via CLI
- D. Reinstalling the operating system on each node

### Answer: B

Explanation:

PowerFlex Manager (PFxM) is specifically designed to handle the complexity of the lifecycle management (LCM) for the solution. The recommended method is using PFxM LCM because:

- \* Orchestration: It automatically determines the correct order of operations (e.g., MDM  $\rightarrow$  SDS  $\rightarrow$  SDC).
- \* Safety: It ensures the cluster is healthy before proceeding. It automatically places nodes into Maintenance Mode (PMM) to ensure data redundancy is maintained throughout the process.
- \* Compliance: It checks the nodes against a "Compliance File" (RCM - Release Certification Matrix) to ensure that the BIOS, Firmware, Drivers, and OS match the PowerFlex software version.
- \* Efficiency: Manual upgrades (Option A) are error-prone and time-consuming. Reinstalling the OS (Option C) is destructive and unnecessary. While MDMs are upgraded early in the process (Option D), doing it manually is not the recommended method for the whole cluster when PFxM is available.

### NEW QUESTION # 82

Shared file systems in PowerFlex allow data sharing across multiple nodes. True or False?

- A. True
- B. False

### Answer: A

Explanation:

This refers to PowerFlex File (formerly PowerFlex NAS).

While the core PowerFlex product is a block storage solution (providing raw LUNs/Volumes which cannot be safely shared by two standard OS hosts without a cluster file system like VMFS or OCFS2), PowerFlex File introduces NAS nodes. These nodes format the block storage and present it via NFS or SMB protocols. These protocols are specifically designed to allow multiple clients to read and write to the same file system concurrently, enabling true data sharing across the network.

### NEW QUESTION # 83

Which operations are supported for managing snapshots in PowerFlex? (Choose two).

- A. Schedule automatic snapshot creation
- B. Deduplicate snapshot data
- C. Restore data from a snapshot

- D. Convert snapshots to writable volumes

**Answer: A,C**

Explanation:

PowerFlex offers robust snapshot management capabilities accessible via the PowerFlex Manager UI, CLI (SCLI), and REST API.

\* Schedule automatic snapshot creation (Option D): PowerFlex supports Snapshot Policies.

Administrators can define policies that automatically generate snapshots at specific intervals (e.g., every hour, daily, or weekly) and define retention rules (how many snapshots to keep). This automation is critical for meeting Recovery Point Objectives (RPO) without manual intervention.

\* Restore data from a snapshot (Option A): PowerFlex allows administrators to restore a volume to a previous state using a snapshot. In the CLI, this is often handled by the command `overwrite_volume_content`, where the content of the production volume is replaced by the data in the snapshot. This is essential for recovering from data corruption or ransomware events.

Why not B? In PowerFlex, snapshots are already writable volumes by default immediately upon creation.

There is no need to "convert" them; they can be mapped to a host and written to instantly.

Why not C? Deduplication is a property of the Storage Pool (specifically in Fine Granularity pools), not a specific operation triggered on a snapshot.

#### NEW QUESTION # 84

Which tool is used to replicate volumes between PowerFlex clusters?

- A. Replication Engine
- B. Snapshot Scheduler
- C. Storage Data Server
- D. Volume Manager

**Answer: A**

Explanation:

PowerFlex uses a dedicated replication logic often referred to conceptually as the Replication Engine (technically implemented via the SDR - Storage Data Replicator component in v3, or integrated into the SDS in v4).

\* Replication Engine (Option C): This component is responsible for intercepting writes to replicated volumes, bundling them, and transmitting them asynchronously (journal-based) to the remote destination cluster. It manages the Journal volumes, handles the bandwidth throttling, and ensures consistency between the source and target sites.

\* Note: While "Storage Data Server" (B) does the work in v4, "Replication Engine" is the functional answer often used to describe the mechanism of cross-cluster data movement.

#### NEW QUESTION # 85

Which software components are essential for PowerFlex operations? (Choose two).

- A. VMware Horizon
- B. Storage Data Server (SDS)
- C. Meta Data Manager (MDM)
- D. PowerProtect Data Manager

**Answer: B,C**

Explanation:

This question asks for the core components that make up the PowerFlex software-defined storage system.

\* Meta Data Manager (MDM) (Option B): The MDM is the control plane. It manages the mapping of data, monitors the state of the system, controls rebuilds/rebalances, and acts as the central point for configuration. Without the MDM, the cluster cannot function or change state.

\* Storage Data Server (SDS) (Option A): The SDS is the data plane. It is the software installed on every node that contributes storage. It abstracts the local drives, performs I/O operations, and communicates with other SDSs to replicate data.

Incorrect Options: VMware Horizon (C) is VDI software that uses PowerFlex, but is not part of it.

PowerProtect (D) is backup software.

#### NEW QUESTION # 86

.....

Some candidates may think that to get a certification cost too much time and efforts, but if they find the right exam materials, they will change their mind. Our D-PWF-OE-00 study questions will not occupy you much time. Whenever you have spare time, you can learn and memorize some questions and answers of our D-PWF-OE-00 Exam simulation. Gradually, you will learn much knowledge and become totally different from past. You will regret to miss our D-PWF-OE-00 practice materials. Come to purchase our D-PWF-OE-00 learning guide!
