Salesforce Mule-Dev-202 Latest Test Format, Mule-Dev-202 Exam Revision Plan

Before clients purchase our Mule-Dev-202 test torrent they can download and try out our product freely to see if it is worthy to buy our Mule-Dev-202 exam questions. You can visit the pages of our Mule-Dev-202 training guide on the website which provides the demo of our Mule-Dev-202 study torrent and you can see parts of the titles and the form of our software. IF you have any question about our Mule-Dev-202 Exam Questions, there are the methods to contact us, the evaluations of the client on our Mule-Dev-202 practice guide, the related exams and other information about our Mule-Dev-202 test torrent.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q61-Q66):

NEW QUESTION # 61

Northern Trail Outfitters (NTO) has a complicated process that involves several departments. How should stages be used in Flow Orchestration to organize this process?

- A. Grouping steps based on the systems and tools that will be used to implement the process.
- B. Assigning individual steps to specific users or groups that interact with the process.
- **C. Grouping steps of the process based on hand-offs or key branches of the process.**
- D. Organizing individual steps to be run in parallel to one another throughout the process.

Answer: C

Explanation:

In Flow Orchestration, stages should be used to organize a complicated process by grouping steps based on hand-offs or key branches of the process:

Stages in Flow Orchestration:

Stages help structure the overall process by grouping related steps. Each stage can represent a major phase in the process, which

might involve a transition of responsibility or a significant decision point.

Grouping by Hand-offs:

Organizing steps by hand-offs ensures that when responsibility shifts from one department to another, the transition is clear and manageable. This approach aligns with the natural flow of work across departments.

Key Branches:

Key branches in the process often represent decision points or significant changes in the workflow. Grouping steps that belong to these branches within specific stages helps in managing and tracking progress more effectively.

NEW QUESTION # 62

An AnyAirlines employee determines that an RPA process is a strong candidate for automation. When approving the process, the employee needs to specify a group of potential users to manage the RPA process throughout its lifecycle.

According to best practices, which group should the employee choose?

- A. Scrum team
- B. Multiple project managers
- C. Center for Enablement
- **D. Center of Excellence**

Answer: D

Explanation:

When approving an RPA process and specifying a group of potential users to manage it throughout its lifecycle, the best practice is to choose the Center of Excellence (CoE):

Center of Excellence (CoE):

The CoE is a team of experts who are responsible for overseeing the implementation, governance, and management of RPA processes within the organization.

They ensure that best practices are followed, provide guidance and support to project teams, and manage the overall RPA strategy and roadmap.

Lifecycle Management:

The CoE is well-equipped to manage the RPA process from initial development through deployment and ongoing maintenance. They have the expertise to handle any issues that arise and ensure the process remains efficient and effective.

Best Practices:

By involving the CoE, the organization ensures that the RPA process adheres to established best practices, maintains high quality, and delivers the expected benefits.

NEW QUESTION # 63

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.

How can they achieve this task?

- **A. 1. Add a Slack action step after the Salesforce action step.2. Use the record to construct the message.**
- B. 1. Add a Slack action step after the Salesforce action step.2. Use the first record from the collection of Salesforce records to construct the message.
- C. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records.2. Use a Slack action step to construct the messages from the record being processed.
- D. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record.2. In the branch, add a Slack action step and use the record to construct the message.

Answer: A

Explanation:

Salesforce Action Step:Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference:MuleSoft Composer Salesforce Connector

Add Slack Action Step:After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference:MuleSoft Composer Slack Connector

Use the Record:Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference:Building Messages in Composer

No Need for Collection Handling:Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference:Get Records Action

NEW QUESTION # 64

Northern Trail Outfitters publishes REST APIs to Anypoint Exchange. They write the REST APIs using RAML and share these APIs with internal and external users.

In which language or languages can a user download these APIs?

- A. RAML, OAS, and Apiary
- B. RAML only
- **C. RAML and OAS only**
- D. RAML and Apiary only

Answer: C

Explanation:

Users can download REST APIs published to Anypoint Exchange in the following languages:

RAML (RESTful API Modeling Language):

RAML is a modeling language for defining APIs, used by MuleSoft for creating REST APIs.

OAS (OpenAPI Specification):

OAS, also known as Swagger, is another widely-used standard for defining APIs.

MuleSoft supports both RAML and OAS formats, allowing users to choose between these two standards when downloading API definitions.

NEW QUESTION # 65

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation.

How does this help expedite RPA process development?

- **A. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.**
- B. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.
- C. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.
- D. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.

Answer: A

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.
