## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q435-Q440):

### NEW QUESTION # 435

Content and Media Server is the latest requirement that you need to meet for a client.

The client has been very specific about his requirements such as low latency, high availability, durability, and access control. Potentially there will be millions of views on this server and because of "spiky" usage patterns, operations teams will need to provision static hardware, network, and management resources to support the maximum expected need. The Customer base will be initially low but is expected to grow and become more geographically distributed.

Which of the following would be a good solution for content distribution?

- A. Amazon S3 as both the origin server and for caching
- B. AWS CloudFront as both the origin server and for caching
- C. AWS Storage Gateway as the origin server and Amazon EC2 for caching
- **D. Amazon S3 as the origin server and Amazon CloudFront for caching**

**Answer: D**

Explanation:

As your customer base grows and becomes more geographically distributed, using a high-performance edge cache like Amazon CloudFront can provide substantial improvements in latency, fault tolerance, and cost.

By using Amazon S3 as the origin server for the Amazon CloudFront distribution, you gain the advantages of fast in-network data transfer rates, simple publishing/caching workflow, and a unified security framework.

Amazon S3 and Amazon CloudFront can be configured by a web service, the AWS Management Console, or a host of third-party management tools.

### NEW QUESTION # 436

A company has an application that is backed by an Amazon DynamoDB table. The company's compliance requirements specify that database backups must be taken every month, must be available for 6 months, and must be retained for 7 years.

Which solution will meet these requirements?

- **A. Create an AWS Backup plan to back up the DynamoDB table on the first day of each month. Specify a lifecycle policy that transitions the backup to cold storage after 6 months. Set the retention period for each backup to 7 years.**

- B. Create a DynamoDB on-demand backup of the DynamoDB table on the first day of each month Transition the backup to Amazon S3 Glacier Flexible Retrieval after 6 months. Create an S3 Lifecycle policy to delete backups that are older than 7 years.
- C. Use the AWS CLI to create an on-demand backup of the DynamoDB table Set up an Amazon EventBridge rule that runs the command on the first day of each month with a cron expression Specify in the command to transition the backups to cold storage after 6 months and to delete the backups after 7 years.
- D. Use the AWS SDK to develop a script that creates an on-demand backup of the DynamoDB table. Set up an Amazon EventBridge rule that runs the script on the first day of each month. Create a second script that will run on the second day of each month to transition DynamoDB backups that are older than 6 months to cold storage and to delete backups that are older than 7 years.

**Answer: A**

Explanation:

Explanation

This solution satisfies the requirements in the following ways:

- \* AWS Backup will automatically take full backups of the DynamoDB table on the schedule defined in the backup plan (the first of each month).
- \* The lifecycle policy can transition backups to cold storage after 6 months, meeting that requirement.
- \* Setting a 7-year retention period in the backup plan will ensure each backup is retained for 7 years as required.
- \* AWS Backup manages the backup jobs and lifecycle policies, requiring no custom scripting or management.

#### NEW QUESTION # 437

The Principal element of an IAM policy refers to the specific entity that should be allowed or denied permission, whereas the translates to everyone except the specified entity.

- A. Vendor
- B. Action
- C. Principal
- **D. NotPrincipal**

**Answer: D**

Explanation:

The element NotPrincipal that is included within your IAM policy statements allows you to specify an exception to a list of principals to whom the access to a specific resource is either allowed or denied. Use the NotPrincipal element to specify an exception to a list of principals. For example, you can deny access to all principals except the one named in the NotPrincipal element.

#### NEW QUESTION # 438

A solutions architect has configured the following IAM policy.

Which action will be allowed by the policy?

- A. An AWS Lambda function can be created from any network.
- B. An AWS Lambda function can be deleted from the 100.220.0.0/20 network
- **C. An AWS Lambda function can be deleted from the 220.100.16.0/20 network**
- D. An AWS Lambda function can be deleted from any network.

**Answer: C**

#### NEW QUESTION # 439

You have just set up your first Elastic Load Balancer (ELB) but it does not seem to be configured properly.

You discover that before you start using ELB, you have to configure the listeners for your load balancer.

Which protocols does ELB use to support the load balancing of applications?

- **A. HTTP, HTTPS, TCP, and SSL**
- B. HTTP and HTTPS

- C. HTTP, HTTPS , TCP, SSL and SSH
- D. HTTP, HTTPS , TCP, SSL and SFTP

**Answer: A**

Explanation:

Before you start using Elastic Load Balancing(ELB), you have to configure the listeners for your load balancer. A listener is a process that listens for connection requests. It is configured with a protocol and a port number for front-end (client to load balancer) and back-end (load balancer to back-end instance) connections.

Elastic Load Balancing supports the load balancing of applications using HTTP, HTTPS (secure HTTP), TCP, and SSL (secure TCP) protocols. The HTTPS uses the SSL protocol to establish secure connections over the HTTP layer. You can also use SSL protocol to establish secure connections over the TCP layer.

The acceptable ports for both HTTPS/SSL and HTTP/TCP connections are 25, 80, 443, 465, 587, and 1 024-65535.
