ISO-IEC-27001-Lead-Implementer Test Braindumps, ISO-IEC-27001-Lead-Implementer Study Guide Pdf

The clients can consult our online customer service before and after they buy our ISO-IEC-27001-Lead-Implementer study materials. We provide considerate customer service to the clients. Before the clients buy our ISO-IEC-27001-Lead-Implementer study materials they can consult our online customer service personnel about the products' version and price and then decide whether to buy them or not. After the clients buy the ISO-IEC-27001-Lead-Implementer study materials they can consult our online customer service about how to use them and the problems which occur during the process of using. If the clients fail in the test and require the refund our online customer service will reply their requests quickly and deal with the refund procedures promptly. In short, our online customer service will reply all of the clients' questions about the ISO-IEC-27001-Lead-Implementer Study Materials timely and efficiently.

The PECB ISO-IEC-27001-Lead-Implementer exam covers various topics related to information security management, including the principles and concepts of information security, risk management, and the implementation and maintenance of an ISMS. It also tests the candidates' ability to assess and manage information security risks, develop and implement security controls, and monitor and improve the effectiveness of the ISMS. ISO-IEC-27001-Lead-Implementer Exam is designed to evaluate the candidates' competence in implementing and maintaining an effective ISMS based on the ISO/IEC 27001 standard.

PECB Certified ISO/IEC 27001 Lead Implementer Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which situation described in scenario 7 Indicates that Texas H&H Inc. implemented a detective control?

- A. Texas H&H Inc. hired an expert to conduct a forensic analysis
- B. Texas H&H Inc. tested its system for malicious activity and checked cloud based email settings
- C. Texas H&H Inc. integrated the incident management policy in Its information security policy

Answer: A

NEW QUESTION # 40

Invalid Electric, a manufacturer of electrical components, is preparing for its upcoming ISO 27001 certification audit. This is the first

time the company has undergone such an audit, and many of its employees are not familiar with the process. The management team is concerned that employees may not be adequately prepared for interviews and the scrutiny of documentation during the audit. To ensure that employees are ready for the audit, the management team is considering several options to help them understand what to expect and how to handle the auditor's questions confidently.

How can Invalid Electric's ensure that Us employees are prepared for the audit?

- A. By allowing the employees to observe the technologies used
- B. By showing the employees the internal audit reports so they can anticipate the questions asked by the auditor
- **C. By conducting practice Interviews with the employees**

Answer: C

NEW QUESTION # 41

Scenario 8: SunDee is an American biopharmaceutical company, headquartered in California, the US. It specializes in developing novel human therapeutics, with a focus on cardiovascular diseases, oncology, bone health, and inflammation. The company has had an information security management system (ISMS) based on SO/IEC 27001 in place for the past two years. However, it has not monitored or measured the performance and effectiveness of its ISMS and conducted management reviews regularly. Just before the recertification audit, the company decided to conduct an internal audit. It also asked most of their staff to compile the written individual reports of the past two years for their departments. This left the Production Department with less than the optimum workforce, which decreased the company's stock.

Tessa was SunDee's internal auditor. With multiple reports written by 50 different employees, the internal audit process took much longer than planned, was very inconsistent, and had no qualitative measures whatsoever. Tessa concluded that SunDee must evaluate the performance of the ISMS adequately. She defined SunDee's negligence of ISMS performance evaluation as a major nonconformity, so she wrote a nonconformity report including the description of the nonconformity, the audit findings, and recommendations. Additionally, Tessa created a new plan which would enable SunDee to resolve these issues and presented it to the top management. Based on scenario 8, did the nonconformity report include all the necessary aspects?

- A. Yes, the report included all the necessary aspects
- **B. No, the report must also specify the root cause of the nonconformity**
- C. No, the report must also specify the audit criteria

Answer: B

Explanation:

Explanation

According to ISO/IEC 27001:2022, a nonconformity report is a document that records the details of any deviation from the audit criteria that is identified during an audit². The audit criteria are the set of policies, procedures, requirements, or specifications that are used as a reference against which audit evidence is compared³. Therefore, a nonconformity report must include the following aspects:

The description of the nonconformity, which should clearly state what the deviation is, where it occurred, and when it was detected
The audit findings, which should provide the objective evidence that supports the identification of the nonconformity
The audit criteria, which should specify the reference document or standard that the nonconformity deviates from
The recommendations, which should suggest the possible corrective actions or improvements that can be taken to address the nonconformity
In scenario 8, Tessa's nonconformity report included the description of the nonconformity, the audit findings, and the recommendations, but it did not specify the audit criteria. Therefore, the report did not include all the necessary aspects and was incomplete.

References:

- 1: ISO/IEC 27001:2022, Clause 9.2.3
- 2: ISO/IEC 27001:2022, Clause 3.23
- 3: ISO/IEC 27001:2022, Clause 3.5
- 4: ISO/IEC 27001:2022, Annex A.9.2.3

NEW QUESTION # 42

An organization has implemented a control that enables the company to manage storage media through their life cycle of use, acquisition, transportation and disposal. Which control category does this control belong to?

- A. Technological
- B. Organizational
- **C. Physical**

Answer: C

Explanation:

According to ISO/IEC 27001:2022, the control that enables the organization to manage storage media through their life cycle of use, acquisition, transportation and disposal belongs to the category of physical and environmental security. This category covers the controls that prevent unauthorized physical access, damage and interference to the organization's information and information processing facilities. The specific control objective for this control is A.11.2.7 Secure disposal or reuse of equipment¹, which states that "equipment containing storage media shall be checked to ensure that any sensitive data and licensed software has been removed or securely overwritten prior to disposal or reuse."² References:

* ISO/IEC 27001:2022, Annex A

* ISO/IEC 27002:2022, clause 11.2.7

NEW QUESTION # 43

Scenario 2: Beauty is a cosmetics company that has recently switched to an e-commerce model, leaving the traditional retail. The top management has decided to build their own custom platform in-house and outsource the payment process to an external provider operating online payments systems that support online money transfers.

Due to this transformation of the business model, a number of security controls were implemented based on the identified threats and vulnerabilities associated to critical assets. To protect customers' information. Beauty's employees had to sign a confidentiality agreement. In addition, the company reviewed all user access rights so that only authorized personnel can have access to sensitive files and drafted a new segregation of duties chart.

However, the transition was difficult for the IT team, who had to deal with a security incident not long after transitioning to the e-commerce model. After investigating the incident, the team concluded that due to the out-of-date anti-malware software, an attacker gamed access to their files and exposed customers' information, including their names and home addresses.

The IT team decided to stop using the old anti-malware software and install a new one which would automatically remove malicious code in case of similar incidents. The new software was installed in every workstation within the company. After installing the new software, the team updated it with the latest malware definitions and enabled the automatic update feature to keep it up to date at all times. Additionally, they established an authentication process that requires a user identification and password when accessing sensitive information.

In addition, Beauty conducted a number of information security awareness sessions for the IT team and other employees that have access to confidential information in order to raise awareness on the importance of system and network security.

Based on scenario 2, Beauty should have implemented (1) _____ to detect

(2) _____.

- A. (1) Network intrusions, (2) technical vulnerabilities
- B. (1) An access control software, (2) patches
- C. (1) An intrusion detection system, (2) intrusions on networks

Answer: C
