Preparing for SAP C-ACDET-2506 PDF Exam Questions In Short Time

It is known to us that time is money, and all people hope that they can spend less time on the pass. We are happy to tell you that The SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite exam questions from our company will help you save time. With meticulous care design, our study materials will help all customers pass their exam in a shortest time. If you buy the C-ACDET-2506 Study Materials from our company, you just need to spend less than 30 hours on preparing for your exam, and then you can start to take the exam. We believe that you will pass your exam and get the related certification with C-ACDET-2506 study dump.

SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

Topic 2	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 3	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q19-Q24):

NEW QUESTION # 19

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Move
- **B. Deploy**
- C. Migrate
- D. Push

Answer: B

NEW QUESTION # 20

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To advise the customer and partner in solution configurations
- B. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions
- **C. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations**
- D. To test and validate the solution prior to go-live

Answer: C

Explanation:

The SAP Deployment Lead acts as the primary liaison between the customer and SAP Support, managing technical issues, escalations, and coordination during the deployment lifecycle. They oversee environment readiness, migration activities, and issue resolution. Advising on configurations is typically the Functional Lead's role, configuration changes are done by consultants, and testing is led by the customer or testing teams. The Deployment Lead focuses on technical project management and communication.

NEW QUESTION # 21

Which of the following considerations are important when creating custom fields? (Select 2 correct answers)

- A. The data type of a field can be dynamically changed, depending on data type availability
- **B. When a field has been created and published, that field type has been consumed from the number of available fields on the class**
- **C. There's a limit to the number of fields, by data type, that can be added to a class**
- D. Published field changes can be reverted via Un-publish to free up memory

Answer: B,C

Explanation:

SAP Ariba allocates a finite number of field "slots" per data type for each class. When a custom field is created and published, it

consumes one of these slots. Therefore, there are limits to how many fields of each type you can create per class. The data type cannot be changed after creation, and unpublishing does not reclaim the allocated slot; you must delete the field to free resources. Planning field usage carefully avoids hitting these system limits.

NEW QUESTION # 22

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab
- B. Define a Visibility Condition in the Conditions tab
- C. Load Relation types and Relation entries
- D. Enable field property "Use relationship chooser" in the Advanced tab
- E. Enable field property "Enable for Template Field Setter" in the Advanced tab

Answer: A

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering. This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.

NEW QUESTION # 23

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. AMLExtension - AML customizations such as custom fields
- B. DynamicForm - custom form templates (dForms)
- C. SupplierContact - contacts for the suppliers
- D. Template - project templates such as Contract templates

Answer: C

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContact data, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

NEW QUESTION # 24

.....

These C-ACDET-2506 exam questions braindumps are designed in a way that makes it very simple for the candidates. Each and every C-ACDET-2506 topic is elaborated with examples clearly. Use TestPDF top rate SAP C-ACDET-2506 Exam Testing Tool for making your success possible. C-ACDET-2506 exam preparation is a hard subject. Plenty of concepts get mixed up together due to which student feel difficult to identify them. There is no similar misconception in C-ACDET-2506 Dumps because we have made it more interactive for you. The candidates who are less skilled may feel difficult to understand the C-ACDET-2506 questions can take help from these braindumps. The tough topics of C-ACDET-2506 certification have been further made easy with examples, simulations and graphs. Candidates can avail the opportunity of demo of free C-ACDET-2506 dumps.
