Moreover, we also pass guarantee and money back guarantee, if you fail to pass the exam, we will refund your money, and no other questions will be asked.

ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q57-Q62):

NEW QUESTION # 57
Which of these items should implementers create/configure first during an SPM implementation?

- A. Demand management
- B. Dashboards
- C. Business units
- D. Lenses

Answer: C

NEW QUESTION # 58
On the demand form, what does the Discount Rate impact?

- A. Internal Rate of Return %.
- B. ROI.
- C. Financial Benefit.
- D. Net Present Value (NPV).

Answer: D

Explanation:
Explanation
According to the ServiceNow documentation1, the discount rate on the demand form impacts the net present value (NPV) of the demand. The NPV is the difference between the present value of the benefits and the present value of the costs of the demand. The discount rate is the rate used to discount future cash flows to their present value. A higher discount rate means that future cash flows are worth less in the present, and vice versa. The other options are incorrect because:
A: ROI: The ROI (return on investment) is the ratio of the net value to the estimated cost of the demand. The discount rate does not affect the ROI, as both the net value and the estimated cost are based on the present value of the cash flows2.
C: Financial Benefit: The financial benefit is the sum of the present value of the benefits of the demand. The discount rate does not affect the financial benefit directly, but only indirectly through the NPV calculation3.
D: Internal Rate of Return %: The internal rate of return % (IRR) is the discount rate that makes the NPV of the demand equal to zero. The discount rate does not affect the IRR, but rather the IRR is derived from the NPV equation4.

NEW QUESTION # 59

Where is planned cost calculated from when requesting resources from a group and when resource role is specified?

- A. The task rate cards.
- B. The distribution costs
- C. The hourly rate of the specified role.
- D. The CI rate cards.

Answer: C

Explanation:
Explanation
According to the ServiceNow documentation1, when requesting resources from a group and when resource role is specified, the planned cost is calculated from the hourly rate of the specified role. The system uses the rate card associated with the resource plan to determine the hourly rate for each role. The other options are incorrect because:
A: The distribution costs: The distribution costs are the costs that are distributed across the project tasks based on the resource plan allocation2.
B: The task rate cards: The task rate cards are the rate cards that are applied to the project tasks, not the resource plan3.
D: The CI rate cards: The CI rate cards are the rate cards that are applied to the configuration items, not the resource plan4.

NEW QUESTION # 60

Where can a project manager go to view quick reports of time card exceptions, and category wise time reported for their projects?

- A. User metrics dashboard
- B. Analytics Time sheet
- C. PMO dashboard
- D. Analytics Project manager

Answer: C

NEW QUESTION # 61

What is used to generate labor cost if a project or demand does not have an associated rate model?

- A. Project plan
- B. Default labor rate
- C. Default Resource Management Schedule
- D. Time card

Answer: B

NEW QUESTION # 62
