

IdentityIQ-Engineer유효한 최신버전덤프, IdentityIQ-Engineer시험대비최신버전덤프자료

SailPoint IdentityIQ-Engineer인증시험패스는 아주 어렵습니다. 자기에게 맞는 현명한 학습자료선택은 성공을 내딛는 첫 발입니다. 퍼펙트한 자료만의 시험에 성공할 수 있습니다. Pass4Tes시험문제와 답이야 말로 퍼펙트한 자료이죠. 우리SailPoint IdentityIQ-Engineer인증시험자료는 100%보장을 드립니다. 또한 구매 후 일년무료 업데이트버전을 받을 수 있는 기회를 얻을 수 있습니다.

SailPoint IdentityIQ-Engineer Exam Syllabus Topics:

Section	Objectives
Topic 1: IdentityIQ Architecture and Core Concepts	- IdentityIQ platform components - System architecture and deployment topology - Identity warehouse and identity model
Topic 2: Provisioning and Connectors	- Connector configuration and management - Provisioning workflows and policies - Application onboarding
Topic 3: Identity Lifecycle Management	- Identity aggregation and correlation - Joiner/Mover/Leaver (JML) processes - Lifecycle event triggers and workflows
Topic 4: Configuration, Troubleshooting, and Maintenance	- Debugging provisioning issues - System configuration and tuning - Logging and monitoring
Topic 5: Policies, Roles, and Security Controls	- Separation of duties (SoD) - Policy violations and remediation - Role modeling and role hierarchy
Topic 6: Access Request and Governance	- Access reviews and certifications - Access request workflows - Role-based access control (RBAC)

IdentityIQ-Engineer유효한 최신버전 덤프 시험준비에 가장 좋은 시험덤프공부자료

취직을 원하시나요? 승진을 원하시나요? 연봉인상을 원하시나요? 무엇을 원하시든 국제적으로 인정받은 IT인증자격증을 취득하는 것이 길입니다. SailPoint인증 IdentityIQ-Engineer시험은 널리 인정받는 인기자격증의 시험과목입니다. SailPoint인증 IdentityIQ-Engineer시험을 패스하여 자격증을 취득하면 소원이 이루어집니다. ITDumpsKR의SailPoint인증 IdentityIQ-Engineer덤프는 시험패스율이 높아SailPoint인증 IdentityIQ-Engineer시험준비에 딱 좋은 공부자료입니다.

다. ITDumpsKR에서 덤프를 마련하여 자격증취득에 도전하여 인생을 바꿔보세요.

최신 Identity Security Engineer IdentityIQ-Engineer 무료샘플문제 (Q104-Q109):

질문 # 104

Is this a true statement about localization support in IdentityIQ?

Solution: The default language can be changed from English by replacing the appropriate message files.

- A. No
- B. Yes

정답: B

설명:

Yes, this statement is true. The default language of IdentityIQ can be changed from English by replacing the appropriate message files. Administrators can modify or replace the default English message files with those for another language, which will then become the system's default language. This allows IdentityIQ to be localized according to the organization's language preferences.

SailPoint IdentityIQ Localization Guide

SailPoint IdentityIQ Administration Guide (Language Settings and Message File Management Sections)

질문 # 105

Can a Workgroup be used for the following scenario?

Solution: Automatically creating multiple groups based on the values of a single identity attribute.

- A. Yes
- B. No

정답: B

설명:

A Workgroup in SailPoint IdentityIQ is a collection of users or identities grouped together for the purpose of task assignment, workflow approvals, or certifications. Workgroups are not typically used for automatically creating multiple groups based on the values of a single identity attribute. To achieve automatic grouping based on identity attributes, you would need to use dynamic roles or possibly rule-based population. These methods allow for creating roles or groups dynamically by evaluating identity attributes and assigning memberships accordingly.

SailPoint IdentityIQ Administration Guide (Sections on Workgroups and Dynamic Roles) SailPoint IdentityIQ Configuration Guide (Role Management)

질문 # 106

Is this statement correct about writing and executing source mapping rules to populate identity attributes?

Solution: Once the value for the identity attribute has been calculated, the rule must persist the identity attribute to the database.

- A. Yes
- B. No

정답: B

설명:

The statement is incorrect. When writing and executing source mapping rules to populate identity attributes, the rule itself does not need to persist the identity attribute to the database. In SailPoint IdentityIQ, once the value for an identity attribute has been calculated by a source mapping rule, IdentityIQ automatically handles the persistence of this attribute to the database as part of the aggregation or provisioning process. The developer does not need to explicitly persist the attribute; this is managed by the system.

SailPoint IdentityIQ Source Mapping Guide

SailPoint IdentityIQ Administration Guide (Aggregation and Attribute Mapping Sections)

질문 # 107

Can the following IdentityIQ object be extended to store client-specific data by updating the corresponding .HBM file?

Solution: Link

- A. Yes
- B. No

정답: B

설명:

In SailPoint IdentityIQ, certain objects, such as the Link object, cannot be directly extended by updating the corresponding .HBM (Hibernate Mapping) file. Modifying or extending core IdentityIQ objects typically requires a deeper level of customization involving the extension of the application schema and possibly custom Java code. The .HBM files are part of IdentityIQ's internal persistence framework, and altering them is not a supported or recommended method for extending objects in a production environment. Customization should instead be done using SailPoint's supported extension points, such as using ManagedAttributes or CustomAttributes within the IdentityIQ application framework. For guidelines on extending IdentityIQ objects, refer to the SailPoint IdentityIQ Customization Guide and best practices documentation.

질문 # 108

An engineer needs to first create a custom audit event and then set up an associated report.

What are four steps to accomplish this goal?

Proposed Solution:

Set up a new AuditAction in the AuditConfig object XML:

```
< ObjectAttribute displayName= "User Type " editMode= "Permanent " extendedNumber= "2 " name= " userType " type= "string" />
```

- A. Yes
- B. No

정답: B

설명:

This proposed solution is not valid as written. The stem says the engineer needs to create a custom audit event and set up an associated report. The proposed XML fragment is an ObjectAttribute definition for an attribute named userType; it is not an AuditAction definition. An ObjectAttribute entry is used in object configuration contexts to describe an attribute's display, edit behavior, extended number, name, and type. That does not define a new audit action/event in the AuditConfig object. A proper audit event definition would use an AuditAction element or equivalent AuditConfig configuration identifying the audit action name, display name, and enabled state. Because the XML fragment shown does not create a custom audit action, it cannot satisfy the required step. This is exactly the kind of syntax-level distinction an IdentityIQ engineer must catch:

correct object type and correct XML element matter. References/topics: IdentityIQ Engineer - AuditConfig XML, AuditAction definition, ObjectAttribute configuration, custom audit event setup.

질문 # 109
