NEW QUESTION # 41
Which one of the following options best describes the benefit of unit test rules?

- A. Unit testing can identify issues before the rule is ready to share or integrate.
- B. Unit testing validates information that must be provided before the rule can be saved.
- C. Unit testing validates that the dependent rules are available to the application.
- D. Unit testing identifies issues that might impact application performance in a production system.

Answer: A

NEW QUESTION # 42
An organization has an open position for Lead System Architect. Interested candidates can enter their details on the website of the organization. The captured details are validated and used by the Interview and Onboarding process. After completion of the Interview milestone, the details are passed to the Onboarding process.
Which of the following design patterns is best suited to capturing the candidate details?

- A. Apply the Data instance first case design pattern, capture the candidate details and then a background process will run on the required date to validate the details. The Interview case/process is initiated for every eligible candidate.
- B. Apply the Data instance after case design pattern, and capture the candidate details that reference an open position case. A background process then runs on the required date to validate the details. The Interview case/process is initiated for every eligible candidate.
- C. Apply the Parallel case processing case design pattern. Collect candidate info and Interview are two siblings cases, and update each other.
- D. Apply the Divide and conquer case design pattern. The entire requirement is divided into small tasks, and each task is considered one case type (for example, Collect Candidate Info and Conduct Interview are two different case types).
