UiPath-ADPv1 Valid Study Plan, UiPath-ADPv1 Exam Pass4sure

There are three different versions of our UiPath-ADPv1 exam questions: the PDF, Software and APP online. The PDF version of our UiPath-ADPv1 study guide can be printable and You can review and practice with it clearly just like using a professional book. The second Software versions which are usable to windows system only with simulation test system for you to practice in daily life. The last App version of our UiPath-ADPv1 learning guide is suitable for different kinds of electronic products.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q90-Q95):

NEW QUESTION # 90

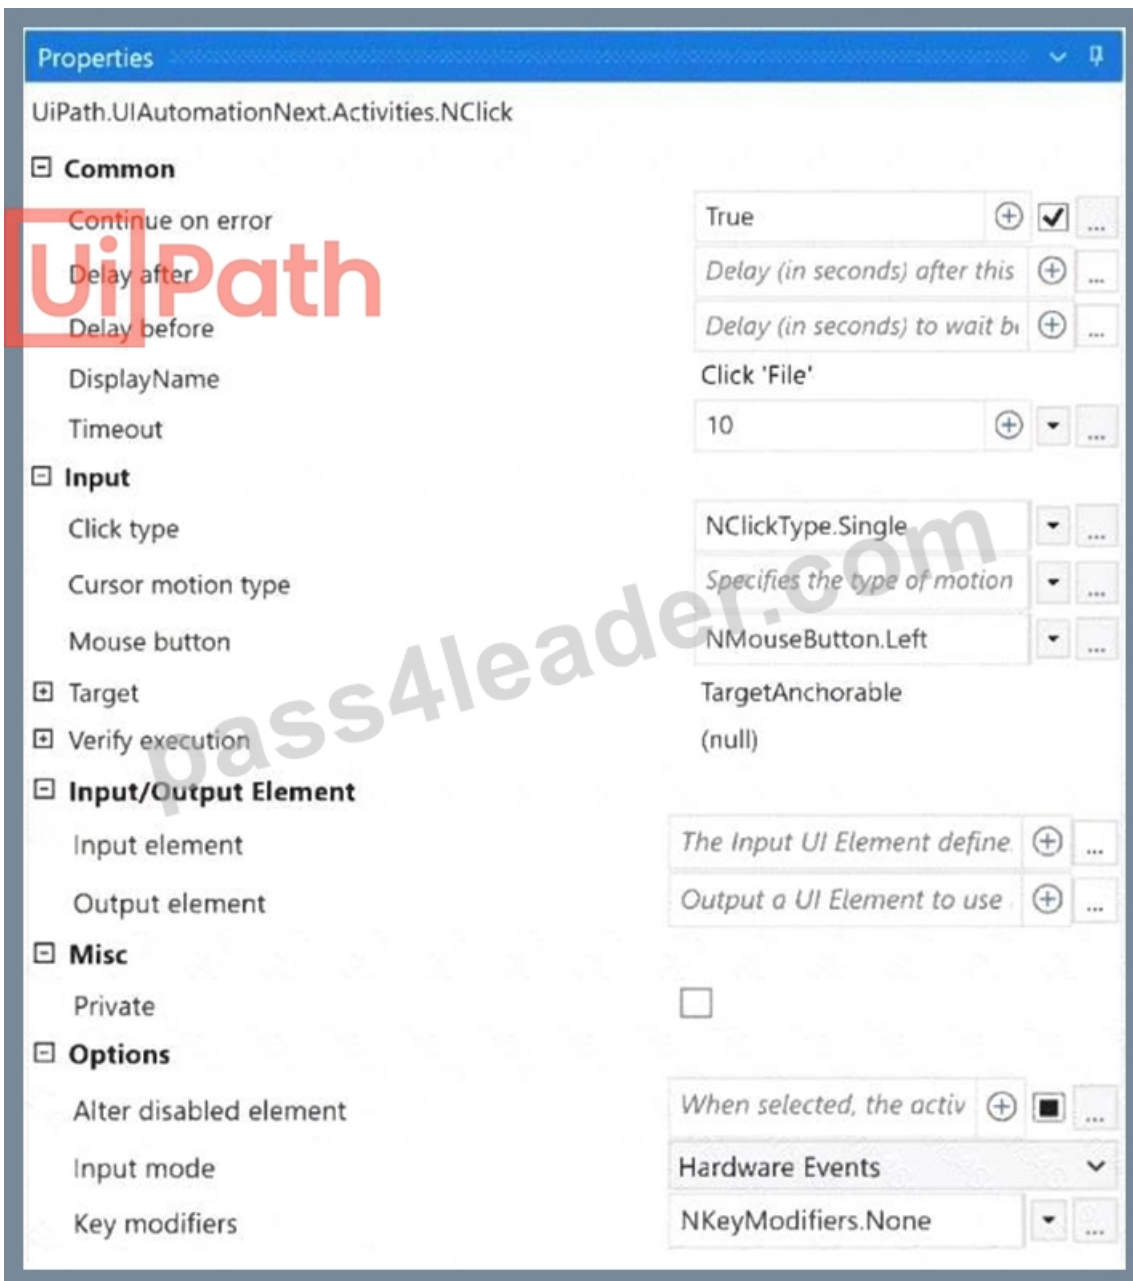

What is the default polling interval set for an event trigger?

- A. 5 minutes
- B. 1 minute
- C. 10 minutes
- D. 15 minutes

Answer: A

NEW QUESTION # 91

A developer configured the properties for a Click activity as shown below:

What happens if the activity cannot find its target at runtime?

- A. The next activity is executed after 10 milliseconds.
- **B. An exception is thrown after 10 seconds.**
- C. An exception is thrown after 10 milliseconds.
- D. The next activity is executed after 10 seconds.

Answer: B

Explanation:

The Click activity has a property called TimeoutMS. This property specifies the amount of time (in milliseconds) to wait for the activity to be executed before an error is thrown. In this case, the TimeoutMS property is set to 10000 milliseconds (10 seconds). Therefore, if the activity cannot find its target at runtime, an exception will be thrown after 10 seconds.

NEW QUESTION # 92

A company needs to execute background automation without worrying about managing infrastructure. They want to scale easily and avoid provisioning virtual machines. Based on the information provided, which type of UiPath Automation Cloud robot should they use?

- **A. Serverless Automation Cloud Robots**

- B. Cloud Robots - VM
- C. Physical Servers Robots
- D. Hybrid Cloud Robots

Answer: A

Explanation:

Serverless Automation Cloud Robots are designed for background processes and are hosted entirely by UiPath. This means the company does not need to manage infrastructure or virtual machines. They are also instantly scalable, ideal for scenarios requiring cloud-native automation without provisioning effort.

Reference: UiPath Automation Cloud Documentation > Robots > Serverless Automation

NEW QUESTION # 93

In a UiPath State Machine, what is the primary function of the Trigger section of a State activity?

- A. To define the entry actions when transitioning into a state.
- **B. To specify the condition or event that initiates a transition from the current state**
- C. To establish the exit actions when moving out of a state.
- D. To execute the final state actions before terminating the state machine.

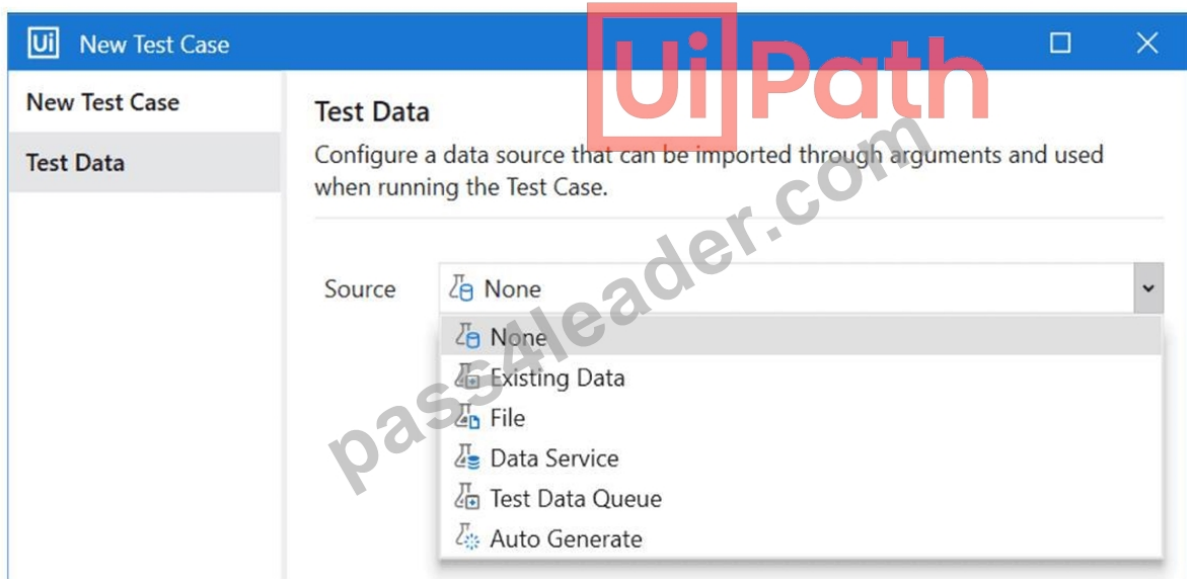

Answer: B

Explanation:

In a UiPath State Machine, the Trigger section of a State activity is used to specify the condition or event that initiates a transition from the current state to another state.

NEW QUESTION # 94

When creating a new test case, which option restricts dynamic data update in UiPath Orchestrator once the test case is published?

- A. Data Service
- B. Test Data Queue
- C. Data Service with Filter
- **D. File**

Answer: D

Explanation:

When creating a new test case in UiPath Studio, you can configure a data source that can be imported through arguments and used when running the test case. You can choose from different options for the data source, such as File, Data Service, Test Data Queue, and Auto Generate. Each option has different implications for how the test data is updated in UiPath Orchestrator once the test case is published.

The option that restricts dynamic data update in UiPath Orchestrator once the test case is published is File.

This option allows you to use Excel and CSV files as data sources for your test cases. When you import a file as a data source, a JSON file is created in the Test Data folder of your project, which contains the test data values. When you publish the test case, the JSON file is also published and stored in Orchestrator. The test data values are not updated dynamically in Orchestrator, unless you manually update the test data by choosing the Update Test Data option in Studio or Test Explorer. This option is useful when you want to use static or predefined test data that does not change frequently.

The other options do not restrict dynamic data update in UiPath Orchestrator once the test case is published.

Option A, Test Data Queue, allows you to use a queue in Orchestrator as a data source for your test cases.

You need to configure a JSON schema and add a test data queue in Orchestrator before using this option. The test data values are updated dynamically in Orchestrator, as the queue items are processed by the test case.

This option is useful when you want to use queue items as test data and track their status and progress. Option B, Data Service with Filter, allows you to use Data Service entities as data sources for your test cases. Data Service is a feature of Automation Cloud that lets you create and manage data entities and relationships. You need to select an entity and apply a filter using the Query Builder before using this option. The test data values are updated dynamically in Orchestrator, as the entity records are modified by the test case or other processes. This option is useful when you want to use data entities as test data and perform CRUD operations on them. Option D, Auto Generate, allows you to use test data that is automatically generated by UiPath Studio to cover as many paths as possible during execution. You need to select a test data generation strategy and a number of test data sets before using this option. The test data values are updated dynamically in Orchestrator, as the test case is executed with different data sets. This option is useful when you want to use random or diverse test data that can increase the test coverage and quality.
