## 更新する-正確的なCVS試験問題解説集試験-試験の準備方法CVS合格内容

試験準備のための学習資料を見つけている場合、当社の資料は検索を終了します。私たちのCVS試験トレント

は、あなたが期待できない高品質を持っています。CVSトレントは時間を大幅に節約するのに役立ち、あなたがやりたいことをする自由時間が増えると思います。私たちのCVSテスト問題集の使用について後悔がないことを保証できます。アクションの時間が来たら、思考を止めて、入って、私たちのCVS試験トレントを試してください。CVS試験に合格し、短時間で証明書を取得する必要があります。

## SAVE International Certified Value Specialist 認定 CVS 試験問題 (Q86-Q91):

### 質問 # 86

A FAST diagram is used to  
Choose 3 answers.

- A. Identify the sequence of functions.
- B. Illustrate the relationship of functions to each other.
- C. Help identify missing functions.
- D. Test the validity of functions under study.
- E. Identify required activities.

正解: B、C、D

解説:

The correct answers are B, C, and D. In the Function Analysis Phase, the FAST diagram is used as a function-logic model, not as an activity schedule or work-sequence chart. The VM Guide describes FAST, or Function Analysis System Technique, as one of the most effective methods for classifying and organizing functions and as a powerful diagramming technique for analyzing the relationship of functions. It specifically states that FAST diagrams are used to show the specific relationships of functions, test the validity of functions under study, and help identify missing functions. (pdfcoffee.com) Therefore, C is correct because FAST visually illustrates how functions relate through How/Why logic. B is correct because the diagram tests whether identified functions are valid within the functional logic path. D is correct because gaps in the How/Why logic expose missing functions.

Option A is not the best answer because FAST does not primarily identify a chronological sequence of functions. Option E is incorrect because FAST focuses on functions, not required activities or tasks.

References/topics: Function Analysis Phase; FAST Diagramming; Function Logic; Missing Functions; Validity of Functions.

### 質問 # 87

Match the statements that best identify a FAST diagram and flowchart.

A FAST Diagram

-- Choose your answer --

Choose your answer

- Describes the activities of the study subject
- Identifies flaws in the study subject
- Prioritizes activities of the study subject
- Describes the purpose of the study subject

Fast2Test  
FIRST TEST, FIRST PASS  
A FLOWCHART

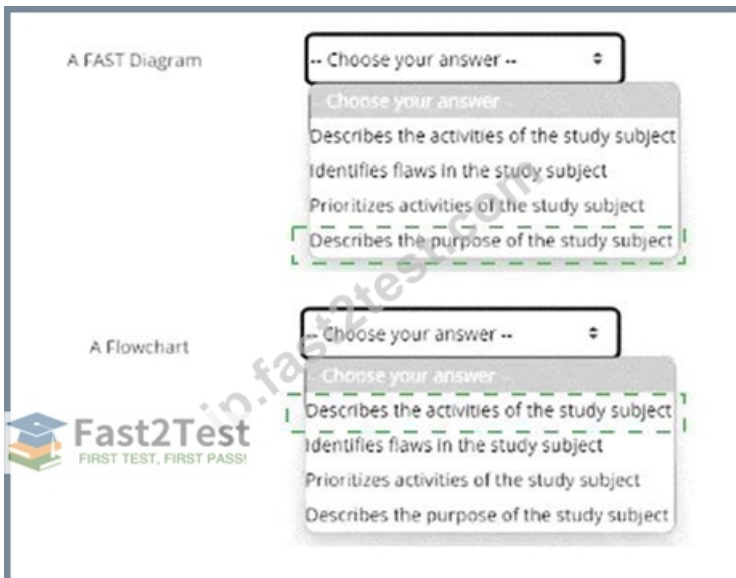

-- Choose your answer --

Choose your answer

- Describes the activities of the study subject
- Identifies flaws in the study subject
- Prioritizes activities of the study subject
- Describes the purpose of the study subject

正解:

解説:

Explanation:

Item	Correct Match
A FAST Diagram	Describes the purpose of the study subject
A Flowchart	Describes the activities of the study subject

The correct matches are FAST Diagram = Describes the purpose of the study subject and Flowchart = Describes the activities of the study subject. In Value Methodology, a FAST diagram is not an activity map. It is a function model. SAVE's Study Guide defines a function as the original intent or purpose that a product, service, or process is expected to perform, expressed in active verb/measurable noun form. It also defines FAST as a graphical representation of dependent relationships between functions within a project.

Therefore, FAST is used to understand the functional purpose and how functions logically relate through "how/why" thinking.

A flowchart is different. It represents process flow: the sequence of activities, steps, or operations used by the study subject. SAVE's glossary defines a process as a sequence of activities that delivers a product or project.

That aligns directly with the option "Describes the activities of the study subject."

"Identifies flaws" is too narrow; defects may be discovered during analysis, but that is not the defining purpose of either tool.

"Prioritizes activities" is also incorrect because prioritization normally belongs to evaluation or decision methods, not basic FAST or flowchart definition.

References/topics: Function Analysis Phase; FAST Diagramming; Function Modeling; Process Flowchart; How-Why Logic.

### 質問 # 88

What are tools the VM facilitator might use during the Creativity Phase?

Choose 3 answers.

- A. SWOT analysis
- B. Reverse brainstorming
- C. Mind-mapping
- D. RACI matrix
- E. Hitchhiking

正解: B、C、E

解説:

The correct answers are Reverse brainstorming, Hitchhiking, and Mind-mapping. In the Creativity Phase, the VM facilitator leads the team in generating many possible alternatives for performing the required functions identified during Function Analysis. The objective is divergent thinking: produce a broad range of ideas without judging them too early. SAVE's certification study material identifies creativity as a distinct VM Job Plan area and emphasizes idea generation before moving into Evaluation. ( ) Reverse brainstorming is appropriate because it helps the team approach a function or problem from the opposite direction, often revealing hidden assumptions and new solution paths. Hitchhiking is also a valid creativity technique because one team member builds on

another person's idea, improving participation and expanding idea quantity. Mind-mapping supports creativity by visually organizing related thoughts around a central function or issue, helping the team see connections and generate additional alternatives. SWOT analysis is not primarily a Creativity Phase tool; it is more commonly used for strategic assessment. RACI matrix is also incorrect because it assigns responsibilities and accountabilities, which fits planning or implementation control, not creative idea generation.  
References/topics: Creativity Phase; Idea Generation; Brainstorming Techniques; Divergent Thinking; VM Facilitation.

#### 質問 # 89

Which of the following are appropriate techniques to achieve the expected output of the Evaluation Phase?

- A. Forced relationships method
- B. Blast-create-refine method
- C. Weighted evaluation technique
- **D. Coarse, medium, and fine filters**

正解: D

解説:

The correct answer is C. Coarse, medium, and fine filters . In the VM Job Plan, the Evaluation Phase converts the large number of ideas generated during the Creativity Phase into a smaller, rationally selected group of ideas suitable for Development. SAVE's Value Methodology Standard states that the Evaluation Phase uses a structured evaluation process to select ideas with potential for value improvement while still delivering required functions and respecting performance requirements and resource limits. ( ) The SAVE International Core Competencies directly classify Evaluation Phase techniques as coarse filter, medium filter, and fine filter methods. These appear under "Apply Evaluation Techniques," with coarse filters representing simple screening, medium filters supporting intermediate comparison, and fine filters supporting more detailed evaluation before ideas move into development. ( ) Option A, weighted evaluation, can be part of a detailed or fine-filter evaluation, but it is not the complete filtering approach named in the CVS/VM Guide framework. Options B and D are more closely associated with idea generation or creative stimulation, not the primary structured filtering process of the Evaluation Phase.

References/topics: Evaluation Phase; Apply Evaluation Techniques; Coarse Filter; Medium Filter; Fine Filter; Idea Selection.

#### 質問 # 90

A VM program's standard operating procedures should include

- A. a required number of creative ideas to be generated in a study.
- **B. how subjects for VM studies are identified.**
- C. a requirement that each VM team member be independent from the development team.
- D. a listing of standard functions to be included in a VM study.

正解: B

解説:

The correct answer is B . A VM program's standard operating procedures should define how candidate subjects or projects are identified, screened, selected, prioritized, and authorized for VM studies. This belongs to VM program governance because limited VM resources must be applied to subjects with appropriate scope, timing, information availability, organizational importance, and value-improvement potential. SAVE's Value Standard states that the standard assists managers and value program managers in applying VM within organizations in a consistent manner, and also guides practitioners and managers in determining when to apply VM to a project to maximize innovation and implementation benefits. ( [wsdot.wa.gov](http://wsdot.wa.gov) ) Option A is too rigid. SAVE recognizes multidisciplinary teams of experienced professionals and stakeholders; people outside the project may be added for perspective, but every team member is not required to be independent from the development team ( [wsdot.wa.gov](http://wsdot.wa.gov) ) Option C is incorrect because functions are not pre-listed generically; they are identified specifically for the study subject during Function Analysis. Option D is also incorrect because creativity should encourage broad idea generation, but the SOP should not prescribe a fixed number of ideas as a universal requirement. VM procedures should standardize the management process, not force artificial technical outputs.

References/topics: VM Programs; Program SOPs; Study Subject Identification; Value Program Management; Study Selection Criteria.

#### 質問 # 91

.....

ローマは一日に建てられませんでした。多くの人にとって、短い時間でCVS試験に合格できることは難しいです。しかし、幸いにして、CVSの練習問題の専門会社として、弊社の最も正確な質問と回答を含むCVS試験の資料は、CVS試験に対する問題を効果的に解決できます。CVS練習問題をちゃんと覚えると、CVSに合格できます。あなたはCVS練習問題を選べれば、試験に合格できますよ！
