Axis ANVE Test Practice & ANVE Reliable Exam Online

Keeping in view different preparation styles of Axis ANVE test applicant TorrentValid has designed three easy-to-use formats for its product. Each format has a pool of Axis Network Video Exam (ANVE) actual questions which have been compiled under the guidance of thousands of professionals worldwide. Questions in this product will appear in the Axis ANVE final test.

Axis ANVE certification program is globally recognized and provides a competitive edge to professionals in the security industry. Axis Network Video Exam certification ensures that the individuals who hold it possess the necessary skills and knowledge to design, install, and maintain Axis network video solutions. It also helps employers identify individuals who have demonstrated a high level of expertise in Axis network video technologies.

By passing the ANVE Exam, professionals can demonstrate their expertise and knowledge in network video technology. Axis Network Video Exam certification can help them to stand out in a crowded job market and can open up new career opportunities. The ANVE certification is also beneficial for companies that want to ensure that their employees have the necessary skills and knowledge to work with network video technology.

Axis Network Video Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18
What network device is required to move data from one LAN to another?

- A. A subnet
- B. A router
- C. A port
- D. A hub

Answer: B

Explanation:
"A router is used to connect different local area networks (LANs), routing traffic between them and providing access to other networks or the internet."
- Axis Communications Academy, Network Video Fundamentals, 2022
"Routers are devices that forward data packets between computer networks."
- Axis Network Device Basics

NEW QUESTION # 19
Outdoor ready cameras in the AXIS Q60 Series typically works with 60 W PoE, if we connect it to 30W PoE it will

- A. Work but with limited pan and tilt speed.
- B. Work but with limited temperature specification.
- C. Give picture but impossible to pan and tilt.
- D. Work for a limited time.

Answer: A

Explanation:
The AXIS Q60 Series cameras are designed to work with 60W PoE to ensure full functionality, including optimal pan and tilt speeds. If connected to a 30W PoE, the camera will still operate, but the pan and tilt functions will be limited in speed due to insufficient power. This limitation is outlined in Axis's technical documentation for the Q60 Series, which specifies the power requirements and the impact on camera functionality when those requirements are not met.

NEW QUESTION # 20
A customer needs to install an Axis LPR camera at a distance of 1.2 km (4000 ft) from the switch. What cables are recommended for connectivity?

- A. STP (shielded twisted pair)
- B. UTP (unshielded twisted pair)
- C. SMF (single mode fibre)
- D. Coaxial

Answer: C

Explanation:
"Single mode fiber (SMF) is recommended for long-distance connections, typically up to tens of kilometers, as it provides minimal signal loss over long runs. Standard twisted pair (UTP/STP) cabling, such as Cat5e
/Cat6, has a maximum recommended distance of 100 meters (328 feet). For distances over 1 km, fiber optics such as SMF are required."
- Axis Communications Academy, Network Video Fundamentals, 2022
"For connections greater than 500 m, use fiber optic cables. Single mode fiber is suitable for very long distances up to several kilometers."
- Axis Communications Fiber Media Converters Guide

Axis Communications Academy, Network Video Fundamentals, 2022 (p. 70-71) Axis Fiber Media Converters Guide

NEW QUESTION # 21
If an installer wants to configure 20 cameras to show the same synchronized date and time in Live View, how can this be achieved?

- A. Fetch the date and time from the installed root certificate
- B. Synchronize the date and time with a remote FTP server by downloading files from the server
- C. Synchronize the date and time with a remote NTP server
- D. Adapt the date and time from a client computer when using the camera configuration tool

Answer: C

Explanation:
To ensure that 20 cameras show the same synchronized date and time in Live View, the best method is to synchronize the date and time with a remote NTP (Network Time Protocol) server. NTP servers are designed to synchronize clocks of network devices, ensuring accurate and consistent timekeeping across all connected devices. This method is reliable and commonly used in networked environments to maintain time synchronization across multiple devices.

NEW QUESTION # 22
When zooming in on an object with varifocal or zoom lens, light sensitivity of the camera is

- A. dependent on lens
- B. decreasing
- C. increasing
- D. the same

Answer: B

Explanation:
When zooming in on an object with a varifocal or zoom lens, the light sensitivity of the camera generally decreases. This is because zooming in reduces the amount of light reaching the sensor due to the longer focal length and narrower aperture, which can result in a darker image. This effect is more pronounced in cameras with lower-quality lenses or insufficient lighting. Axis Network Video documentation explains how lens properties and zoom settings can impact light sensitivity and overall image quality.
