

Pass Guaranteed Quiz Trustable Fortinet - NSE6_SDW_AD-7.6 Updated CBT

Fortinet NSE7_OTS-6.4

Fortinet NSE 7 - OT Security 6.4

1

If you still have questions with passing the exam, choose us, and we will help you pass the exam successfully. Our NSE7_OTS-6.4 training materials contain the both the questions and answers. You can have a practice through different versions. If you prefer to practice on paper, then [NSE7_OTS-6.4 Pdf Version](#) will satisfy you. If you want to have a good command of the NSE7_OTS-6.4 exam dumps, you can buy all three versions, which can assist you for practice.

Fortinet NSE7_OTS-6.4 (Fortinet NSE 7 - OT Security 6.4) Certification Exam is designed for professionals in the field of operational technology (OT) security. Fortinet NSE 7 - OT Security 6.4 certification aims to validate the candidate's knowledge and skills in securing OT networks and devices. NSE7_OTS-6.4 exam covers various topics, including OT security concepts, policies and procedures, risk assessment and management, and incident response.

Fortinet NSE7_OTS-6.4 (Fortinet NSE 7 - OT Security 6.4) certification exam is designed to test the knowledge and skills of the cybersecurity professionals in securing operational technology (OT) networks. It is a comprehensive exam that covers various topics related to OT security, including network security, endpoint protection, access control, and incident response. Fortinet NSE 7 - OT Security 6.4 certification is ideal for individuals who want to specialize in OT security and enhance their knowledge and skills in this area.

Fortinet NSE7_OTS-6.4 certification is a valuable credential for security professionals who want to demonstrate their expertise in Fortinet's OT security solutions. Fortinet NSE 7 - OT Security 6.4 certification can help individuals advance their careers by enhancing their knowledge and skills in OT security. It can also help organizations identify and hire qualified professionals who have demonstrated their proficiency in Fortinet's products and solutions.

What's more, part of that ExamDumpsVCE NSE6_SDW_AD-7.6 dumps now are free: https://drive.google.com/open?id=1LI6IV5nyhNynf6QMkfs6mgmqYKe_7Q1

Our company is widely acclaimed in the industry, and our NSE6_SDW_AD-7.6 learning dumps have won the favor of many customers by virtue of their high quality. Started when the user needs to pass the qualification test, choose the NSE6_SDW_AD-7.6 real questions, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials. Our NSE6_SDW_AD-7.6 practice guide is devoted to research on which methods are used to enable users to pass the test faster. Therefore, through our unremitting efforts, our NSE6_SDW_AD-7.6 Real Questions have a pass rate of 98% to 100%. Therefore, our company is worthy of the trust and support of the masses of users, our NSE6_SDW_AD-7.6 learning dumps are not only to win the company's interests, especially in order to help the students in the shortest possible time to obtain qualification certificates.

Fortinet NSE6_SDW_AD-7.6 Exam Overview:

Certification Vendor:	Fortinet
Exam Name:	Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator
Exam Number:	NSE6_SDW_AD-7.6
Certificate Validity Period:	2 years
Passing Score:	Pass/Fail (cut score determined by Fortinet)
Exam Price:	\$200 USD (excluding taxes)

Real Exam Qty:	35–40
Available Languages:	English
Exam Format:	Scenario-based questions, Multiple Choice, Multiple Response
Related Certifications:	Fortinet Certified Professional - Secure Networking FCSS in SASE NSE 6 - SD-WAN
Exam Duration:	75 minutes
Recommended Training:	Fortinet Training - SD-WAN Enterprise Administrator
Exam Registration:	Pearson VUE Registration
Sample Questions:	Fortinet NSE6_SDW_AD-7.6 Sample Questions
Exam Way:	Online proctored or onsite testing via Pearson VUE
Pre Condition:	No mandatory prerequisites; recommended: 3+ years networking experience, 2+ years FortiGate/FortiManager experience
Official Syllabus URL:	https://training.fortinet.com/local/staticpage/view.php?page=sd-wan_enterprise_administrator_exam

>> NSE6_SDW_AD-7.6 Updated CBT <<

100% Pass Quiz Professional Fortinet - NSE6_SDW_AD-7.6 Updated CBT

The content of our NSE6_SDW_AD-7.6 exam questions emphasizes the focus and seizes the key to use refined NSE6_SDW_AD-7.6 questions and answers to let the learners master the most important information by using the least amount of them. And we provide varied functions to help the learners learn our NSE6_SDW_AD-7.6 Study Materials and prepare for the exam. The NSE6_SDW_AD-7.6 self-learning and self-evaluation functions help the learners find their weak links and improve them promptly.

Fortinet NSE6_SDW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	Rules and routing: This section explains how to design and apply SD-WAN rules to control traffic steering across multiple WAN links. It also includes configuring SD-WAN routing to ensure proper path selection and connectivity between networks.
Topic 2	Centralized management: This domain focuses on deploying and managing SD-WAN using FortiManager for centralized control. It includes implementing branch configuration deployment and using SD-WAN Manager with overlay orchestration to simplify large-scale network management.
Topic 3	SD-WAN setup: This domain covers how to deploy an enterprise SD-WAN environment by designing SD-WAN members and zones and configuring them for efficient traffic management. It also focuses on implementing Performance SLAs to monitor link quality and ensure applications use the best available path.
Topic 4	SD-WAN troubleshooting: This domain explains how to diagnose and resolve issues related to SD-WAN operation. It includes troubleshooting SD-WAN rules, session behavior, routing problems, and ADVPN connectivity to maintain reliable network performance.
Topic 5	Advanced IPsec: This section covers the deployment of advanced IPsec configurations within SD-WAN environments. It includes implementing hub-and-spoke IPsec topologies, configuring ADVPN, and supporting multihub, multiregion, and large-scale secure SD-WAN deployments.

Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62

(Refer to the exhibit.

Settings Info

Name Social_app

Status Enabled Disabled

Source

Address 4 LAN-net

User group

Destination

Address

Internet service

Outgoing Interfaces

Interface selection strategy Manual Manually assign outgoing interfaces.

You configure SD-WAN on a standalone FortiGate device.

You want to create an SD-WAN rule that steers traffic related to Facebook and LinkedIn through the less costly internet link. What must you do to set Facebook and LinkedIn applications as destinations from the GUI? Choose one answer.)

- A. Install a license to allow applications as destinations of SD-WAN rules.
- B. Enable the visibility of the applications field as destinations of the SD-WAN rule.
- C. In the Internet service field, select Facebook and LinkedIn.
- D. You cannot configure applications as destinations of an SD-WAN rule on a standalone FortiGate device.

Answer: C

Explanation:

In FortiOS 7.6, SD-WAN rules can steer traffic based on Internet Services, which represent predefined application and service signatures maintained by FortiGuard. Common applications such as Facebook and LinkedIn are included in the Internet Service database.

According to the FCSS SD-WAN 7.6 curriculum, when configuring an SD-WAN rule from the GUI on a standalone FortiGate device, applications are selected as destinations using the Internet service field, not by enabling a separate application destination field. The exhibit highlights the Internet service option under the Destination section, which is the correct method to match traffic for specific applications.

Option A is incorrect because there is no GUI option to enable application visibility as destinations for SD-WAN rules. Application matching is already abstracted through Internet Services.

Option C is incorrect because standalone FortiGate devices fully support application-based steering using Internet Services in SD-WAN rules.

Option D is incorrect because no additional license is required to use Internet Services in SD-WAN rules.

This functionality is included in FortiOS and relies on the built-in FortiGuard Internet Service database.

Therefore, to steer Facebook and LinkedIn traffic through a specific WAN link, you must select Facebook and LinkedIn in the Internet service field, which corresponds to option B.

NEW QUESTION # 63

You manage an SD-WAN topology and you will soon deploy 50 new branches. Which two tasks can you do in advance to simplify this deployment? (Choose two.)

- A. Create model devices.
- B. Define metadata variable values for each device.
- C. Create a policy blueprint.
- D. Create a zero-touch provisioning (ZTP) template.

Answer: A,B

Explanation:

Define metadata variable values for each device: Preparing metadata variables (like branch ID, site IP, WAN gateway, etc.) in advance ensures smooth automation when deploying new branches, as FortiManager uses these variables to customize configurations automatically for each device.

Create model devices: Creating model devices in FortiManager allows predefinition of configuration templates and mappings, so when real devices connect, they automatically inherit their intended configuration - greatly simplifying large-scale SD-WAN onboarding.

NEW QUESTION # 64

You use the FortiManager SD-WAN overlay orchestrator to prepare an SD-WAN deployment.

Using information provided through the SD-WAN overlay template wizard, FortiManager creates templates that are ready to install on the spoke and hub devices. Which three templates are created by the SD-WAN overlay orchestrator for a spoke device? (Choose three.)

- A. Static route template
- B. CLI template
- C. BGP template
- D. Rules template
- E. IPsec tunnel template

Answer: A,D,E

Explanation:

The SD-WAN Overlay Orchestrator automatically generates the key building blocks required for spoke deployment based on the wizard inputs. For spokes, it creates SD-WAN rules templates to define traffic steering behavior, static route templates to ensure proper reachability toward overlay and underlay networks, and IPsec tunnel templates to build the overlay VPN connections toward hubs. These three components together form the complete spoke-side SD-WAN deployment structure generated by the orchestrator.

NEW QUESTION # 65

Which two features must you configure before FortiGate can steer traffic according to SD-WAN rules? (Choose two.)

- A. Security profiles
- B. Underlay links
- C. Firewall policies
- D. Overlay links
- E. Traffic shaping

Answer: B,C

Explanation:

SD-WAN rule-based steering depends on having usable WAN paths defined in the SD-WAN fabric and a policy framework that allows traffic to be evaluated and redirected accordingly.

Underlay links must be configured so FortiGate has reachable physical or logical WAN interfaces to build SD-WAN paths and perform path selection. Firewall policies are also required because SD-WAN rules are evaluated within policy processing, and without an appropriate policy, traffic cannot be matched and steered through SD-WAN logic.

NEW QUESTION # 66

Refer to the exhibit that shows a diagnose output on FortiGate.

```
pke_fgt # diagnose sys sdwan advpn-session
Session head(jfk-0-HUB1:1)
(1) Service ID(3), last access(4136110), remote health check info(3)
Selected path: local(HUB1-VPN1, port1) gw: 192.2.0.1 remote IP: 203.0.113.1
(192.168.1.2)
Remote information:
1: latency: 1.833133 jitter: 0.482600 pktloss: 0.000000 mos: 4.403007 sla: 0x1
cost: 0 remote gw: HUB1-VPN1 transport_group: 1 bandwidth up: 10239 down: 10239
bidirection: 2048 ipv4: 203.0.113.1(192.168.1.2) ipv6
::1bc2(20e6:7e0c:fe7f:0:1c:256d:487:1bc2)
2: latency: 1.725933 jitter: 0.469833 pktloss: 0.000000 mos: 4.403073 sla: 0x1
cost: 0 remote gw: HUB1-VPN2 transport_group: 1 bandwidth up: 10239 down: 10239
bidirection: 2048 ipv4: 203.0.113.9(192.168.1.66) ipv6
6465:7228:3229:2c20:6c6f:6361:6c20:636f(7374:2830:292c:2073:6563:7465:6400)
3: latency: 1.240333 jitter: 0.269700 pktloss: 0.000000 mos: 4.403513 sla: 0x1
cost: 0 remote gw: HUB1-VPN3 transport_group: 0 bandwidth up: 9999999 down:
9999999 bidirection: 19999998 ipv4: 172.16.0.9(192.168.1.130)
```

Based on the output shown in the exhibit, what can you say about the device role and how it handles health checks?

- A. The device is a spoke. It receives health-check measures for the tunnels of another spoke.
- B. The device is a hub. It receives health-check measures for the tunnels of a spoke.
- **C. The device is a spoke. It provides embedded health-check measures for each tunnel to the hub.**
- D. The device is a hub. It receives embedded health-check measures for each tunnel from the spoke.

Answer: C

Explanation:

The diagnose output shows multiple ADVPN tunnels (HUB1-VPN1, HUB1-VPN2, HUB1-VPN3) with detailed latency, jitter, and packet loss values being reported for each. In ADVPN, the spoke performs embedded health checks and provides the hub with the performance metrics for each tunnel. Therefore, the device in the exhibit is a spoke, and it is sending health-check measurements for each tunnel to the hub.
