

Die seit kurzem aktuellsten Salesforce Certified Data Cloud Consultant Prüfungsunterlagen, 100% Garantie für Ihren Erfolg in der Salesforce Data-Con-101 Prüfungen!

Außerdem sind jetzt einige Teile dieser Zertpruefung Data-Con-101 Prüfungsfragen kostenlos erhältlich:
<https://drive.google.com/open?id=16NG9lhayG1BaVvziy2tH3EniT29ktPUk>

Sie brauchen nicht die komplizierte Ordnungsarbeit machen. Sie brauchen nicht für eine lange Zeit warten. Auf unserer Webseite können Sie die neueste und zuverlässigste Prüfungsunterlagen für Salesforce Data-Con-101 erhalten. Unterschiedliche Versionen bieten Ihnen unterschiedliche Einfindungen. Was zweifellos ist, dass alle Versionen von Salesforce Data-Con-101 sind effektiv. Bezahlen Sie mit gesichertem Zahlungsmittel Paypal! Dann können Sie gleich die Salesforce Data-Con-101 Prüfungsunterlagen herunterladen und benutzen!

Salesforce Data-Con-101 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Act on Data: This domain focuses on leveraging Data Cloud data for downstream actions through activations and data actions. It covers working with attributes, managing timing dependencies, troubleshooting activation issues like errors and rejected counts, and understanding requirements for triggering automated processes.
Thema 2	• Identity Resolution: This domain explores creating unified customer profiles through matching and reconciliation processes. It covers how rule sets determine when records link together, how conflicting data is resolved, and understanding the outcomes and use cases of unified identities.
Thema 3	• Data Cloud Setup and Administration: This domain focuses on configuring and managing Data Cloud environments through permissions, data streams, data bundles, and data spaces. It also covers administrative tools and techniques for diagnosing and exploring data using reports, dashboards, flows, APIs, and explorer tools.

- **Data Ingestion and Modeling:** This domain addresses bringing data into Data Cloud and structuring it properly through transformation, ingestion from various sources, and data mapping. It emphasizes best practices for modeling data to support identity resolution and validating ingested data using available tools.

Aktuelle Salesforce Data-Con-101 Prüfung pdf Torrent für Data-Con-101 Examen Erfolg prep

Die Fragenkataloge zur die Salesforce Data-Con-101 Zertifizierungsprüfung von Zertpruefung können den Kandidaten helfen, viel Zeit und Energie zu sparen. Auf diese Weise können Sie beim Bestehen der Salesforce Data-Con-101 Zertifizierungsprüfung bessere Resultate mit wenigerem Einsatz erzielen. Nachdem Sie unsere Prüfungsfragen und Antworten gekauft haben, werden wir Ihnen einjähriger Aktualisierung umsonst anbieten. Wir versprechen Ihnen, dass wir Ihnen eine volle Rückerstattung bedingungslos geben werden, entweder die gekauften Prüfungsmaterialien Qualitätsproblem haben, oder Sie die Salesforce Data-Con-101 Zertifizierungsprüfung nicht bestehen.

Salesforce Certified Data Cloud Consultant Data-Con-101 Prüfungsfragen mit Lösungen (Q150-Q155):

150. Frage

A retailer wants to unify profiles using Loyalty ID which is different than the unique ID of their customers. Which object should the consultant use in identity resolution to perform exact match rules on the Loyalty ID?

- A. Contact Identification object
- B. Individual object
- **C. Party Identification object**
- D. Loyalty Identification object

Antwort: C

Begründung:

The Party Identification object is the correct object to use in identity resolution to perform exact match rules on the Loyalty ID. The Party Identification object is a child object of the Individual object that stores different types of identifiers for an individual, such as email, phone, loyalty ID, social media handle, etc. Each identifier has a type, a value, and a source. The consultant can use the Party Identification object to create a match rule that compares the Loyalty ID type and value across different sources and links the corresponding individuals.

The other options are not correct objects to use in identity resolution to perform exact match rules on the Loyalty ID. The Loyalty Identification object does not exist in Data Cloud. The Individual object is the parent object that represents a unified profile of an individual, but it does not store the Loyalty ID directly. The Contact Identification object is a child object of the Contact object that stores identifiers for a contact, such as email, phone, etc., but it does not store the Loyalty ID.

Data Modeling Requirements for Identity Resolution

Identity Resolution in a Data Space

Configure Identity Resolution Rulesets

Map Required Objects

Data and Identity in Data Cloud

151. Frage

A global fashion retailer operates online sales platforms across AMFR, FMFA, and APAC. the data formats for customer, order, and product Information vary by region, and compliance regulations require data to remain unchanged in the original data sources. They also require a unified view of customer profiles for real- time personalization and analytics.

Given these requirement, which transformation approach should the company implement to standardise and cleanse incoming data streams?

- **A. Implement batch data transformations.**
- B. Use Apex to transform and cleanse data.
- C. Implement streaming data transformations.

- D. Transform data before ingesting into Data Cloud.

Antwort: A

Begründung:

Given the requirements to standardize and cleanse incoming data streams while keeping the original data unchanged in compliance with regional regulations, the best approach is to implement batch data transformations . Here's why:

Understanding the Requirements

The global fashion retailer operates across multiple regions (AMER, EMEA, APAC), each with varying data formats for customer, order, and product information.

Compliance regulations require the original data to remain unchanged in the source systems.

The company needs a unified view of customer profiles for real-time personalization and analytics.

Why Batch Data Transformations?

Batch Transformations for Standardization :

Batch data transformations allow you to process large volumes of data at scheduled intervals.

They can standardize and cleanse data (e.g., converting different date formats, normalizing product names) without altering the original data in the source systems.

Compliance with Regulations :

Since the original data remains unchanged in the source systems, batch transformations comply with regional regulations.

The transformed data is stored in a separate layer (e.g., a new Data Lake Object or Unified Profile) for downstream use.

Unified Customer Profiles :

After transformation, the cleansed and standardized data can be used to create a unified view of customer profiles in Salesforce Data Cloud.

This enables real-time personalization and analytics across regions.

Steps to Implement This Solution

Step 1: Identify Transformation Needs

Analyze the differences in data formats across regions (e.g., date formats, currency, product IDs).

Define the rules for standardization and cleansing (e.g., convert all dates to ISO format, normalize product names).

Step 2: Create Batch Transformations

Use Data Cloud's Batch Transform feature to apply the defined rules to incoming data streams.

Schedule the transformations to run at regular intervals (e.g., daily or hourly).

Step 3: Store Transformed Data Separately

Store the transformed data in a new Data Lake Object (DLO) or Unified Profile.

Ensure the original data remains untouched in the source systems.

Step 4: Enable Unified Profiles

Use the transformed data to create a unified view of customer profiles in Salesforce Data Cloud.

Leverage this unified view for real-time personalization and analytics.

Why Not Other Options?

A). Implement streaming data transformations :Streaming transformations are designed for real-time processing but may not be suitable for large-scale standardization and cleansing tasks. Additionally, they might not align with compliance requirements to keep the original data unchanged.

C). Transform data before ingesting into Data Cloud :Transforming data before ingestion would require modifying the original data in the source systems, violating compliance regulations.

D). Use Apex to transform and cleanse data :Using Apex is overly complex and resource-intensive for this use case. Batch transformations are a more efficient and scalable solution.

Conclusion

By implementing batch data transformations , the global fashion retailer can standardize and cleanse its data while complying with regional regulations and enabling a unified view of customer profiles for real-time personalization and analytics.

152. Frage

A consultant wants to ensure that every segment managed by multiple brand teams adheres to the same set of exclusion criteria, that are updated on a monthly basis.

What is the most efficient option to allow for this capability?

- A. Create, publish, and deploy a data kit.
- **B. Create a reusable container block with common criteria.**
- C. Create a segment and copy it for each brand.
- D. Create a nested segment.

Antwort: B

Begründung:

The most efficient option to allow for this capability is to create a reusable container block with common criteria. A container block is a segment component that can be reused across multiple segments. A container block can contain any combination of filters, nested segments, and exclusion criteria. A consultant can create a container block with the exclusion criteria that apply to all the segments managed by multiple brand teams, and then add the container block to each segment. This way, the consultant can update the exclusion criteria in one place and have them reflected in all the segments that use the container block.

The other options are not the most efficient options to allow for this capability. Creating, publishing, and deploying a data kit is a way to share data and segments across different data spaces, but it does not allow for updating the exclusion criteria on a monthly basis. Creating a nested segment is a way to combine segments using logical operators, but it does not allow for excluding individuals based on specific criteria. Creating a segment and copying it for each brand is a way to create multiple segments with the same exclusion criteria, but it does not allow for updating the exclusion criteria in one place.

Create a Container Block

Create a Segment in Data Cloud

Create and Publish a Data Kit

Create a Nested Segment

153. Frage

A consultant is integrating an Amazon S3 activated campaign with the customer's destination system.

In order for the destination system to find the metadata about the segment, which file on the S3 will contain this information for processing?

- A. The json file
- B. The .csv file
- C. The .zip file
- D. The .txt file

Antwort: A

Begründung:

The file on the Amazon S3 that will contain the metadata about the segment for processing is B. The json file. The json file is a metadata file that is generated along with the csv file when a segment is activated to Amazon S3. The json file contains information such as the segment name, the segment ID, the segment size, the segment attributes, the segment filters, and the segment schedule. The destination system can use this file to identify the segment and its properties, and to match the segment data with the corresponding fields in the destination system. 154. Frage

The Data Cloud admin at Northern Trail Outfitters (NTO) wants to be proactively and immediately informed via Slack and email if any of the data streams fail for any reason. If this happens, a case should also be triggered as part of NTO's existing support and triage process, and reflected in its global monitoring dashboard.

What should a consultant recommend for these requirements?

- A. Salesforce flows
- B. Data Cloud Query Editor
- C. Data actions
- D. Salesforce reports and dashboards

Antwort: A

Begründung:

To meet the requirement of being proactively and immediately informed via Slack and email if any data streams fail, and to trigger a case as part of the support process, the best solution is to use Salesforce Flows .

Here's why and how this works:

Understanding the Requirements :

The admin wants to be notified immediately via Slack and email when a data stream fails.

A case should also be created automatically to reflect the issue in the global monitoring dashboard.

This requires an automated process that integrates with both internal systems (e.g., Slack, email) and external workflows (e.g., case creation).

Why Salesforce Flows?

Salesforce Flows are highly flexible and can automate complex business processes. They can monitor system events (e.g., data

stream failures) and trigger actions like sending notifications or creating records.

Flows can integrate seamlessly with Slack and email using platform events and action elements.

They can also create cases programmatically and update dashboards for real-time monitoring.

Steps to Implement This Solution :

Step 1: Navigate to Setup > Process Automation > Flows and create a new flow.

Step 2: Configure a Platform Event Trigger or Record-Triggered Flow to listen for data stream failure events.

Step 3: Add an action element to send a notification to Slack using the Slack Integration feature.

Step 4: Add another action element to send an email alert using the Send Email action.

Step 5: Add a step to create a Case record with details about the failure. Use predefined fields to populate relevant information (e.g., error message, timestamp).

Step 6: Update the global monitoring dashboard to reflect the newly created case. This can be done by linking the case to a report or dashboard component.

Why Not Other Options?

A). Data actions: While data actions can perform specific tasks on data, they are not designed for cross-system automation like sending Slack notifications or creating cases.

B). Data Cloud Query Editor: The Query Editor is used for querying and analyzing data but does not provide automation capabilities for notifications or case creation.

D). Salesforce reports and dashboards: Reports and dashboards are for visualizing data, not for triggering actions or automating workflows.

By using Salesforce Flows, NTO can achieve a fully automated and integrated solution that meets all the stated requirements.

155. Frage

.....

Der Vorhang der Lebensbühne wird jederzeit geöffnet werden. Die Hauptsache ist, ob Sie spielen wollen oder einfach weglaufen. Diejenigen, die die Chancen ergreifen können, können Erfolg erlangen. Deshalb müssen Sie Zertprüfung wählen. Sie können jederzeit Ihre Fertigkeiten zeigen. Die Prüfungsmaterialien zur Salesforce Data-Con-101 Zertifizierungsprüfung von Zertprüfung ist die effiziente Methode, die Data-Con-101 Prüfung zu bestehen. Mit Data-Con-101 Zertifikat können Sie Ihren Traum verwirklichen und Erfolg erlangen.
