FS-Con-101試験勉強攻略、FS-Con-101模擬モード

全てのIT専門人員はSalesforceのFS-Con-101の認定試験をよく知っていて、その難しい試験に受かることを望んでいます。SalesforceのFS-Con-101の認定試験の認可を取ったら、あなたは望むキャリアを得ることができるようになります。JPNTTestのSalesforceのFS-Con-101試験トレーニング資料を利用したら、望むことを取得できます。

Salesforce Certified Field Service Consultant 認定 FS-Con-101 試験問題 (Q67-Q72):

質問 # 67

Ursa Major Solar tracks installed products using the Salesforce Asset object. Each individual solar panel is treated separately. To save money on service calls, many times customers will wait to have a technician come onsite until there are multiple panels that need servicing.

How should the callout for multiple panels be treated in Salesforce?

- A. Create a work order hierarchy with each installed product as a child work order.
- **B. Create a work order with a work order line item for each installed product.**
- C. Create an asset hierarchy with each installed product as a child asset in the hierarchy.
- D. Create a work order for each installed product and a work order dependency to assign to the same resource.

正解: B

解説:

Work order line items are used to track individual products or services that are part of a work order. By creating a work order line item for each installed product that needs servicing, the system can track the status and completion of each product separately.

質問 # 68

An employee at universal container performs the role of a dispatcher and a technician How should a consultant configure the field service lightning to support this behavior?

- A. Create one service resource and assign the technician and dispatcher role
- B. Create two service resource and assign them to the employee
- C. Create two skills records and assign them to service resources record
- **D. Create one service resource and assign the relevant permission set license**

正解: D

解説:

Service Resources are records that represent the people or equipment that perform field service tasks[53].

Permission Set Licenses are licenses that grant users access to specific features such as Field Service Dispatcher Console or Field Service Mobile App[54]. Creating one service resource and assigning the relevant permission set license would allow an employee at Universal Containers to perform both dispatcher and technician roles using one record and one license. Creating two skills records and assigning them to service resources record would not affect their roles or access to features. Skills are records that define specific abilities or qualifications that service resources have[55]. Creating two service resources and assigning them to the employee would create duplicate records and require two licenses for one employee. Creating one service resource and assigning the technician and dispatcher role would not work because roles are not fields on the service resource object. References:

質問 # 69

Universal Containers wants to ensure that Service Appointments are dispatched to Resources from the same Service Territory only. How can this be configured?

- A. Include the Resource Availability Work Rule in the Scheduling Policy.
- B. Ensure the Resource's Address is in the same Territory as the Service Appointments.
- **C. Include the Match Territory Work Rule in the Scheduling Policy.**
- D. Mark the Service Territory's Resources as Required on the Service Appointments.

正解: C

解説:

A work rule is used to define scheduling constraints and preferences for service appointments. The Match Territory work rule is used to ensure that service appointments are dispatched to resources from the same serviceterritory only.

質問 # 70

Universal Containers performs multi-staged jobs, where the second job can only begin after completion of the first job. How should a Consultant recommend implementing this process?

- A. Create one Service Appointment and schedule it to two different Resources.
- B. Create two Service Appointments and schedule them to the same Resource.
- **C. Create two Service Appointments, set the Related Service Appointment and Time Dependency.**
- D. Create one Service Appointment with the total duration of the two jobs and assign two Resources.

正解: C

解説:

To perform multi-staged jobs, where the second job can only begin after completion of the first job, two service appointments can be created and linked by setting the Related Service Appointment field on the second service appointment to point to the first one, and setting the Time Dependency field to After Previous.

Creating one service appointment with the total duration of the two jobs and assigning two resources would not ensure that the second job starts after the first one. Creating two service appointments and scheduling them to the same resource or creating one service appointment and scheduling it to two different resources would not create a dependency between the jobs. 質問 # 71

Universal Containers want technicians to view work progress through the work order line-item card in the field service lightning mobile app.

Which configuration steps should a consultant take to meet this requirement?

- A. add the work order line items related list of the work order page layout and assign the layout to the technician's profile.
- B. create a report chart that summarizes work order line items and add a link to the service appointment layout.
- C. create a custom visual force page and add an external link in the field service lightning mobile app to view the page in the mobile browser.
- **D. create a custom lightning component that displays work order progress and deploy it to technicians through the field lightning mobile app.**

正解: D

解説:

A custom lightning component that displays work order progress can be created using Lightning Web Components or Aura Components and deployed to technicians through the Field Service Mobile App using Mobile App Extensions. Adding the work order line items related list to the work order page layout would not show the work progress on the work order line-item card in the Field Service Mobile App. Creating a custom visual force page or a report chart would not be compatible with the Field Service Mobile App user interface.
