What is the name of the protocol that implements serial Modbus over Ethernet?
Available Choices (select all choices that are correct)

- A. MODBUS/Plus
- B. MODBUS/CIP
- C. MODBUS/TCP
- D. MODBUS/Ethernet

Answer: C

Explanation:
MODBUS/TCP is the name of the protocol that implements serial Modbus over Ethernet. MODBUS/TCP is a variant of the Modbus protocol that uses the Transmission Control Protocol (TCP) as the transport layer to encapsulate Modbus messages and send them over Ethernet networks. MODBUS/TCP preserves the Modbus application layer and data model, which means that serial Modbus devices can communicate with MODBUS/TCP devices through a gateway or a converter. MODBUS/TCP is widely used in industrial automation and control systems, as it offers high performance, interoperability, and compatibility with existing Modbus devices. - A. Architecture awareness workshops
- B. Tabletop exercises
- C. Password hygiene campaign
- D. Anomaly detection drills for operators

NEW QUESTION # 128
What is recommended to use between the plant floor and the rest of the company networks?

- A. Hub
- B. Router
- C. Switch
- D. Firewall

Answer: D

Explanation:

ISA/IEC 62443 recommends using a firewall to segment and protect the plant floor (Operational Technology or OT network) from the rest of the company's Information Technology (IT) networks. Firewalls enforce security policies by controlling and monitoring traffic, helping to prevent unauthorized access and potential threats from traversing between business and control networks. Hubs and switches do not provide security; routers may offer some basic filtering, but firewalls are explicitly designed for this purpose. Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3 (Use of network segmentation and firewalls); ISA/IEC 62443-3-2:2020, Section 4.4 (Zones and Conduits).
