Reliable AZ-140 Study Materials - AZ-140 Latest Test Online

Our AZ-140 question materials are designed to help ambitious people. The nature of human being is pursuing wealth and happiness. Perhaps you still cannot make specific decisions. It doesn't matter. We have the free trials of the AZ-140 study materials for you. The initiative is in your own hands. Our AZ-140 Exam Questions are very outstanding. People who have bought our products praise our company highly. In addition, we have strong research competence. So you can always study the newest version of the AZ-140 exam questions.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q17-Q22):

NEW QUESTION # 17

You have an Azure Virtual Desktop deployment that contains the host pools shown in the following table.

You need to create a disaster recovery environment in the West US region. The solution must minimize costs and administrative effort.

What should you do?

- A. Regenerate the token and reregister the virtual machines in the host pools.
- B. Run the Invoke-RdsUserSessionLogoff cmdlet.
- C. **Create an Azure Site Recovery plan.**

- D. Create two new host pools in the West US region.

Answer: C

NEW QUESTION # 18

You have an Azure subscription.

You plan to deploy an Azure Virtual Desktop solution that will contain Windows 10 multi-session hosts in a single host pool. The solution has the requirements shown in the following table.

You need to configure the session host for the host pool. The solution must minimize costs.

How many session hosts should the host pool contain, and how many vCPUs should each session host have?

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer:

Explanation:

Explanation

Graphical user interface, application, table Description automatically generated

NEW QUESTION # 19

You have an Azure Virtual Desktop host pool. The pool contains session hosts that run Windows 10 Enterprise multi-session.

You connect to a Remote Desktop session on Pool1 and discover an issue with the frequency of screen updates.

You need to identify whether the issue related to insufficient server, network, or client resources. The solution must minimize how long it takes to identify the resource type.

What should you do?

- A. From within the current session, use Performance Monitor to display the values of all the RemoteFX Graphics(*)Frames Skipped/Second counters.
- B. From within the current session, use the Azure Virtual Desktop Experience Estimator.
- C. From Azure Cloud Shell, run the Get-AzWvdUserSession cmdlet and specify the UserSessionId parameter.
- D. From Azure Cloud Shell, run the Get-AzOperationalInsightsWorkspaceUsage cmdlet and specify the DefaultProfile parameter.

Answer: A

Topic 1, Litware, Inc

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

Overview

Litware, Inc. is a pharmaceutical company that has a main office in Boston, United States, and a remote office in Chennai, India.

Existing Environment. Identity Environment

The network contains an on-premises Active Directory domain named litware.com that syncs to an Azure Active Directory (Azure AD) tenant named litware.com

The Azure AD tenant contains the users shown in the following table.

All users are registered for Azure Multi-Factor Authentication (MFA).

Existing Environment. Cloud Services

Litware has a Microsoft 365 E5 subscription associated to the Azure AD tenant. All users are assigned Microsoft 365 Enterprise E5 licenses.

Litware has an Azure subscription associated to the Azure AD tenant. The subscription contains the resources shown in the following table.

Litware uses custom virtual machine images and custom scripts to automatically provision Azure virtual machines and join the virtual machines to the on-premises Active Directory domain.

Network and DNS

The offices connect to each other by using a WAN link. Each office connects directly to the internet.

All DNS queries for internet hosts are resolved by using DNS servers in the Boston office, which point to root servers on the internet. The Chennai office has caching-only DNS servers that forward queries to the DNS servers in the Boston office.

Requirements. Planned Changes

Litware plans to implement the following changes:

* Deploy Windows Virtual Desktop environments to the East US Azure region for the users in the Boston office and to the South India Azure region for the users in the Chennai office.

* Implement FSLogix profile containers.

* Optimize the custom virtual machine images for the Windows Virtual Desktop session hosts.

* Use PowerShell to automate the addition of virtual machines to the Windows Virtual Desktop host pools.

Requirements. Performance Requirements

Litware identifies the following performance requirements:

* Minimize network latency of the Windows Virtual Desktop connections from the Boston and Chennai offices.

* Minimize latency of the Windows Virtual Desktop host authentication in each Azure region.

* Minimize how long it takes to sign in to the Windows Virtual Desktop session hosts.

Requirements. Authentication Requirements

Litware identifies the following authentication requirements:

* Enforce Azure MFA when accessing Windows Virtual Desktop apps.

* Force users to reauthenticate if their Windows Virtual Desktop session lasts more than eight hours.

Requirements. Security Requirements

Litware identifies the following security requirements:

* Explicitly allow traffic between the Windows Virtual Desktop session hosts and Microsoft 365.

* Explicitly allow traffic between the Windows Virtual Desktop session hosts and the Windows Virtual Desktop infrastructure.

* Use built-in groups for delegation.

* Delegate the management of app groups to CloudAdmin1, including the ability to publish app groups to users and user groups.

* Grant Admin1 permissions to manage workspaces, including listing which apps are assigned to the app groups.

* Minimize administrative effort to manage network security.

* Use the principle of least privilege.

Requirements. Deployment Requirements

Litware identifies the following deployment requirements:

* Use PowerShell to generate the token used to add the virtual machines as session hosts to a Windows Virtual Desktop host pool.

* Minimize how long it takes to provision the Windows Virtual Desktop session hosts based on the custom virtual machine images.

* Whenever possible, preinstall agents and apps in the custom virtual machine images.

NEW QUESTION # 20

You have an Azure subscription. The subscription contains a virtual machine named Server1 that runs Windows Server and is deployed to the West US Azure region.

You deploy a new Azure Virtual Desktop host pool named HostPool1 to the East US Azure region.

You need to ensure that all the traffic between HostPool1 and Server1 is routed via the Microsoft backbone network.

What should you use?

- A. routing tables
- **B. service endpoints**
- C. Azure Traffic Manager
- D. virtual network peering

Answer: B

Explanation:

"Virtual Network (VNet) service endpoint provides secure and direct connectivity to Azure services over an optimized route over the Azure backbone network." <https://learn.microsoft.com/en-us/azure/virtual-network/virtual-network-service-endpoints-overview>

NEW QUESTION # 21

You have a Azure Virtual Desktop deployment that contains multiple host pools.

You need to create a PowerShell script to sign users out of a specific session host before you perform a maintenance task.

Which PowerShell module should you load in the script?

- A. Az.Automation
- B. **Az.DesktopVirtualization**
- C. Az.Maintenance
- D. Az.COMputC

Answer: B

Explanation:
