## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q393-Q398):

### NEW QUESTION # 393

A company runs Amazon EC2 instances as web servers. Peak traffic occurs at two predictable times each day.

The web servers remain mostly idle during the rest of the day.

A solutions architect must manage the web servers while maintaining fault tolerance in the most cost-effective way.

Which solution will meet these requirements?

- A. Use a script to vertically scale the EC2 instances during peak demand.
- B. Use a cron job to stop the EC2 instances when traffic demand is low.
- C. Purchase Reserved Instances to ensure peak capacity at all times.
- **D. Use an EC2 Auto Scaling group to scale the instances based on demand.**

**Answer: D**

Explanation:

AWS documentation states that EC2 Auto Scaling is the recommended, cost-effective, and fault-tolerant method to manage workloads with predictable or varying demand. Auto Scaling automatically adds instances during peak traffic and terminates them when demand is low, reducing compute cost while maintaining availability across multiple Availability Zones.

Reserved Instances (Option B) would force the company to pay for peak capacity all day, which is not cost-effective.

Stopping instances manually (Option C) or vertically scaling instances (Option D) reduces fault tolerance and increases operational overhead.

### NEW QUESTION # 394

You require the ability to analyze a large amount of data, which is stored on Amazon S3 using Amazon Elastic Map Reduce. You are using the cc2 8x large Instance type, whose CPUs are mostly idle during processing. Which of the below would be the most cost efficient way to reduce the runtime of the job?

- A. Add additional cc2 8x large instances by introducing a task group.
- **B. Use smaller instances that have higher aggregate I/O performance.**
- C. Create fewer, larger files on Amazon S3.
- D. Create more smaller files on Amazon S3.

**Answer: B**

### NEW QUESTION # 395

A client needs you to import some existing infrastructure from a dedicated hosting provider to AWS to try and save on the cost of running his current website. He also needs an automated process that manages backups, software patching, automatic failure detection, and recovery. You are aware that his existing set up currently uses an Oracle database. Which of the following AWS databases would be best for accomplishing this task?

- A. Amazon Redshift
- **B. Amazon RDS**
- C. Amazon ElastiCache
- D. Amazon SimpleDB

**Answer: B**

Explanation:

Amazon RDS gives you access to the capabilities of a familiar MySQL, Oracle, SQL Server, or

PostgreSQL database engine. This means that the code, applications, and tools you already use today with your existing databases can be used with Amazon RDS. Amazon RDS automatically patches the database software and backs up your database, storing the

backups for a user-defined retention period and enabling point-in-time recovery.

#### NEW QUESTION # 396

- A. 100 to 1, 000
- B. 1,000 to 1, 00, 000
- C. 10, 000 to 1, 00, 000
- **D. 1, 000 to 10, 000**

**Answer: D**

#### NEW QUESTION # 397

A gaming company is moving its public scoreboard from a data center to the AWS Cloud. The company uses Amazon EC2 Windows Server instances behind an Application Load Balancer to host its dynamic application. The company needs a highly available storage solution for the application. The application consists of static files and dynamic server-side code.

Which combination of steps should a solutions architect take to meet these requirements? (Select TWO.) ' Store the static files on Amazon S3. Use Amazon

- A. Store the server-side code on Amazon Elastic File System (Amazon EFS). Mount the EFS volume on each EC2 instance to share the files.
- **B. Store the server-side code on a General Purpose SSD (gp2) Amazon Elastic Block Store (Amazon EBS) volume. Mount the EBS volume on each EC2 instance to share the files.**
- C. Store the server-side code on Amazon FSx for Windows File Server. Mount the FSx for Windows File Server volume on each EC2 instance to share the files.
- D. Store the static files on Amazon S3. Use Amazon ElastiCache to cache objects at the edge.
- **E. CloudFront to cache objects at the edge.**

**Answer: B,E**
