

CAS-005 Ressourcen Prüfung - CAS-005 Prüfungsguide & CAS-005 Beste Fragen

BONUS!!! Laden Sie die vollständige Version der ZertFragen CAS-005 Prüfungsfragen kostenlos herunter:
<https://drive.google.com/open?id=1OveKa5q3TE3fFihfmBOtDzn1TdcAlYr3>

Sie brauchen nicht die komplizierte Ordnungsarbeit machen. Sie brauchen nicht für eine lange Zeit warten. Auf unserer Webseite können Sie die neueste und zuverlässigste Prüfungsunterlagen für CompTIA CAS-005 erhalten. Unterschiedliche Versionen bieten Ihnen unterschiedliche Erfindungen. Was zweifellos ist, dass alle Versionen von CompTIA CAS-005 sind effektiv. Bezahlen Sie mit gesichertem Zahlungsmittel Paypal! Dann können Sie gleich die CompTIA CAS-005 Prüfungsunterlagen herunterladen und benutzen!

Das Zertifikat von CompTIA CAS-005 kann Ihnen sehr viel helfen. Mit dem Zertifikat können Sie befördert werden. Und Ihr Lebensniveau wird sich sicher verbessern. Das CompTIA CAS-005 Zertifikat bedeutet für Sie einen großen Reichtum. Die CompTIA CAS-005 (CompTIA SecurityX Certification Exam) Zertifizierungsprüfung ist ein Test für die IT-Fachleute. Die Prüfungsmaterialien zur CompTIA CAS-005 Zertifizierungsprüfung sind die besten und umfassendsten. Nun stellt ZertFragen Ihnen die besten und optimalen Prüfungsmaterialien zur CAS-005 Zertifizierungsprüfung zur Verfügung, die Prüfungsfragen und Antworten enthalten.

Neueste CompTIA SecurityX Certification Exam Prüfung pdf & CAS-005

Prüfung Torrent

Die Zertifizierungsantworten zur CompTIA CAS-005 Zertifizierungsprüfung von ZertFragen sind die Grundbedarfsgüter der Kandidaten, mit deren Sie sich ausreichend auf die CompTIA CAS-005 Prüfung vorbereiten und selbstsicherer die Prüfung machen können. Sie sind sehr zielgerichtet und von guter Qualität. Nur ZertFragen könnte so perfekt sein.

CompTIA CAS-005 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Thema 2	Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.
Thema 3	Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
Thema 4	Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.

CompTIA SecurityX Certification Exam CAS-005 Prüfungsfragen mit Lösungen (Q290-Q295):

290. Frage

A security engineer wants to reduce the attack surface of a public-facing containerized application. Which of the following will best reduce the application's privilege escalation attack surface?

- A. Designing a multicontainer solution, with one set of containers that runs the main application, and another set of containers that perform automatic remediation by replacing compromised containers or disabling compromised accounts
- B. Installing an EDR on the container's host with reporting configured to log to a centralized SIEM and implementing the following alerting rules: `TF PROCESS_USEB=root ALERT_TYPE=critical`
- C. Implementing the following commands in the Dockerfile:
`RUN echo user:x:1000:1000:user:/home/user:/dev/null > /etc/passwd`
- D. Running the container in an isolated network and placing a load balancer in a public-facing network. Adding the following ACL to the load balancer: `PZKZI HTTPES from 0-0.0.0.0/0 port 443`

Antwort: C

Begründung:

Implementing the given commands in the Dockerfile ensures that the container runs with non-root user privileges. Running applications as a non-root user reduces the risk of privilege escalation attacks because even if an attacker compromises the application, they would have limited privileges and would not be able to perform actions that require root access.

* A. Implementing the following commands in the Dockerfile: This directly addresses the privilege escalation attack surface by ensuring the application does not run with elevated privileges.

* B. Installing an EDR on the container's host: While useful for detecting threats, this does not reduce the privilege escalation attack surface within the containerized application.

* C. Designing a multi-container solution: While beneficial for modularity and remediation, it does not specifically address privilege escalation.

* D. Running the container in an isolated network: This improves network security but does not directly reduce the privilege escalation attack surface.

291. Frage

Users are willing passwords on paper because of the number of passwords needed in an environment. Which of the following solutions is the best way to manage this situation and decrease risks?

- **A. implementing an SSO solution and integrating with applications**
- B. Increasing password complexity to require 31 least 16 characters
- C. Requiring users to use an open-source password manager
- D. Implementing an MFA solution to avoid reliance only on passwords

Antwort: A

Begründung:

Implementing a Single Sign-On (SSO) solution and integrating it with applications is the best way to manage the situation and decrease risks. Here's why:

Reduced Password Fatigue: SSO allows users to log in once and gain access to multiple applications and systems without needing to remember and manage multiple passwords. This reduces the likelihood of users writing down passwords.

Improved Security: By reducing the number of passwords users need to manage, SSO decreases the attack surface and potential for password-related security breaches. It also allows for the implementation of stronger authentication methods.

User Convenience: SSO improves the user experience by simplifying the login process, which can lead to higher productivity and satisfaction.

292. Frage

A systems administrator wants to use existing resources to automate reporting from disparate security appliances that do not currently communicate. Which of the following is the best way to meet this objective?

- A. Combining back-end application storage into a single, relational database
- B. Purchasing and deploying commercial off the shelf aggregation software
- **C. Configuring an API Integration to aggregate the different data sets**
- D. Migrating application usage logs to on-premises storage

Antwort: C

Begründung:

The best way to automate reporting from disparate security appliances that do not currently communicate is to configure an API Integration to aggregate the different data sets. Here's why:

Interoperability: APIs allow different systems to communicate and share data, even if they were not originally designed to work together. This enables the integration of various security appliances into a unified reporting system.

Automation: API integrations can automate the process of data collection, aggregation, and reporting, reducing manual effort and increasing efficiency.

Scalability: APIs provide a scalable solution that can easily be extended to include additional security appliances or data sources as needed.

293. Frage

A security architect is investigating instances of employees who had their phones stolen in public places through seemingly targeted attacks. Devices are able to access company resources such as email and internal documentation, some of which can persist in application storage. Which of the following would best protect the company from information exposure? (Select two).

- A. Enable device certificates that will be used for access to company resources

- B. Implement a remote wipe procedure if the phone does not check in for a period of time
- C. Leverage an MDM solution to prevent the side loading of mobile applications
- D. Use application control to restrict the applications that can be installed
- E. Enforce biometric access control with configured timeouts
- F. Set up geofencing for corporate applications where the phone must be near an office

Antwort: B,E

Begründung:

To protect company information on stolen mobile devices, implementing remote wipe procedures ensures data can be erased if a device is suspected lost or stolen. Biometric access control with enforced timeouts further secures the device, requiring biometric authentication periodically, thus limiting unauthorized access even if the device is stolen. Geofencing and certificates provide additional security layers but are less immediate protections against information exposure after theft. Application control and side-loading prevention are important for malware threats but less so for stolen device scenarios.

Reference: CompTIA SecurityX CAS-005, Domain 3.0: Apply mobile device security strategies including remote wipe, biometrics, and device access controls.

294. Frage

Which of the following best explains the business requirement a healthcare provider fulfills by encrypting patient data at rest?

- A. Protecting privacy while supporting portability
- B. Providing for non-repudiation of data
- C. Securing data transfer between hospitals
- D. Reducing liability from identity theft

Antwort: A

Begründung:

Encrypting patient data at rest ensures that sensitive information is protected from unauthorized access, thereby maintaining patient privacy. Additionally, encryption supports data portability by allowing secure transfer and storage of data across different systems and devices without compromising confidentiality. This practice is crucial for healthcare providers to comply with regulations such as the Health Insurance Portability and Accountability Act (HIPAA), which mandates the protection of patient information.

295. Frage

.....

In unserem ZertFragen gibt es viele IT-Fachleute, die CompTIA CAS-005 Zertifizierungsantworten bearbeiten, deren Hit-Rate 100% beträgt. Ohne Zweifel gibt es auch viele ähnliche Websites, die Ihnen vielleicht auch Lernhilfe und Online-Service bieten. Aber wir sind ihnen in vielen Aspekten voraus. Die Gründe dafür liegen darin, dass wir CompTIA CAS-005 Prüfungsfragen und Antworten mit hoher Hit-Rate bieten, die sich regelmäßig aktualisieren. So können die an der CompTIA CAS-005 Zertifizierungsprüfung teilnehmenden Prüflinge unbesorgt bestehen. Wir, ZertFragen, versprechen Ihnen, dass Sie die CompTIA CAS-005 Zertifizierungsprüfung 100% bestehen können.
