

# **ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) exam test & CTAL-TAE\_V2 test training material**

BONUS!!! Download part of DumpsTests CTAL-TAE\_V2 dumps for free: [https://drive.google.com/open?id=1-DwmpboYadBQ7Ei8gvX-E6lS-tMYxl\\_O](https://drive.google.com/open?id=1-DwmpboYadBQ7Ei8gvX-E6lS-tMYxl_O)

DumpsTests provides you with the best preparation material. What makes DumpsTests CTAL-TAE\_V2 brain dumps the first choice for their exam preparation is obviously its superior content that beats its competitors in quality and usefulness. DumpsTests currently has a clientele of more than 60,000 satisfied customers all over the world. This is factual proof of the incomparable quality of our products. The way our brain dumps introduce you the syllabus contents of CTAL-TAE\_V2 Exam increases your confidence to perform well in the actual exam paper.

We hope that you have understood the major features of our three formats. Now let's discuss the benefits you can get upon buying our ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) (CTAL-TAE\_V2) exam material today. The first benefit you can get is the affordable price. Our ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) (CTAL-TAE\_V2) practice material is not expensive and every applicant can purchase it without running tight on his budget. Additionally, you can get a limited-time discount offer on real CTAL-TAE\_V2 exam questions as well.

>> CTAL-TAE\_V2 Discount Code <<

## **Valid CTAL-TAE\_V2 Test Discount & Online CTAL-TAE\_V2 Bootcamps**

All the advantages of our CTAL-TAE\_V2 exam braindumps prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on CTAL-TAE\_V2 exam. We can claim that prepared with our CTAL-TAE\_V2 study guide for 20 to 30 hours, you can easily pass the exam and get your expected score. Also we offer free demos for you to check out the validity and precise of our CTAL-TAE\_V2 Training Materials. Just come and have a try!

## **ISQI ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) Sample Questions (Q12-Q17):**

NEW QUESTION # 12

You are currently conducting a Proof of Concept (PoC) aimed at selecting a tool that will be used for the development of a TAS. This TAS will exclusively be used by one team within your organization to implement automated UI-level test scripts for two web apps. The two tools selected for the PoC use JavaScript /TypeScript to implement the automated test scripts and offer capture and playback capabilities. Three test cases for each of the two web apps were selected to be automated during the PoC. The PoC will compare these two tools in terms of their effectiveness in recognizing and interacting with UI widgets exercised by the test cases, to quickly determine whether test automation is possible and which tool is better. Which of the following TAFs is BEST suited for conducting the PoC?

- A. A two-layer TAF (test scripts, test libraries)
- B. A three-layer TAF (test scripts, business logic, core libraries)
- C. A layered TAF with more than three layers
- **D. A one-layer TAF (test scripts)**

**Answer: D**

Explanation:

For a PoC whose primary goal is rapid feasibility assessment and tool comparison (especially around object recognition and interaction), TAE recommends minimizing framework complexity and upfront engineering.

In a PoC, you want the shortest path to executing representative tests so you can observe tool behavior, stability, locator robustness, synchronization support, and ease of driving the UI widgets in scope. A one-layer approach—simple test scripts with minimal abstraction—reduces the time spent building reusable libraries, enforcing architecture, or creating business layers that are not necessary for answering the PoC question.

Multi-layer frameworks (two-layer and beyond) are more appropriate when you are establishing maintainability, reuse, and scaling for long-term automation. Those benefits matter in the full TAS implementation, but they can distort PoC outcomes by introducing additional design decisions, patterns, and glue code that hide or compensate for tool limitations. Since only six test cases are being automated and the objective is to quickly determine whether UI automation is possible and which tool performs better at widget interaction, the simplest structure (one-layer TAF) is best aligned with TAE PoC guidance: rapid learning, minimal overhead, and clear attribution of outcomes to the tool rather than to framework design.

### NEW QUESTION # 13

(Which of the following answers describes the LEAST relevant concern in selecting suitable test automation tools for a test automation project?)

- A. What is the degree of technical knowledge and skills within the test team to implement code-based test automation for the project (e.g., in terms of programming and design patterns)?
- B. In the case of open-source test automation tools, are these tools released under permissive or restrictive licenses, and, if applicable, is it specified whether they can be modified and by whom?
- **C. Has the test team been formed with the different personalities of its members in mind, to ensure that the interaction between them is effective in achieving the objectives of the test automation project?**
- D. In the case of commercial test automation tools, what factors determine the licensing costs of these tools (e.g., in terms of the maximum number of users supported and whether the license type is fixed or floating)?

**Answer: C**

Explanation:

TAE tool selection focuses on factors that materially affect feasibility, total cost of ownership, and long-term sustainability of the Test Automation Solution (TAS): technical fit, skill fit, integration capability, licensing

/legal constraints, and cost model. Option A is directly relevant because the team's capability strongly influences whether a code-heavy tool and framework approach is realistic and maintainable. Option B is relevant because licensing constraints can affect usage rights, redistribution, modification, internal compliance, and legal risk—critical for tool adoption in many organizations. Option D is also highly relevant because commercial licensing costs and licensing models (named user vs. floating, execution limits, parallelism add-ons, feature tiers) impact budgeting and scaling, and therefore the project's viability. Option C, while important for general team effectiveness, is not a primary criterion for selecting automation tools; it does not describe tool capability, integration constraints, cost, or risk in a way that distinguishes one tool from another. TAE typically treats team collaboration/communication and roles as project and organizational concerns (e.g., governance and processes) rather than tool-selection criteria. Therefore, among the provided choices, "team personality mix" is the least relevant concern for choosing suitable test automation tools in a TAE-focused tool selection.

### NEW QUESTION # 14

A suite of automated test cases was run multiple times on the same release of the SUT in the same test environment. Consider analyzing a test histogram that shows the distribution of test results (pass, fail, etc.) for each test case across these runs. Which of the following potential issues is MOST likely to be identified as a result of such an analysis?

- A. Maintainability issues in automated test cases
- B. Security vulnerabilities in automated test cases
- C. Unstable automated test cases
- D. Outliers in test execution times

**Answer: C**

Explanation:

TAE recommends monitoring test results over repeated executions to detect non-determinism and flakiness. A histogram showing pass/fail distributions per test across multiple runs in the same environment and on the same SUT version is especially useful for identifying tests whose outcomes vary without corresponding changes. If a test sometimes passes and sometimes fails under equivalent conditions, the distribution reveals instability: repeated failures for the same test, intermittent patterns, or inconsistent outcomes compared with other tests that remain stable. This is a classic indicator of flaky tests or unstable test design (e.g., synchronization issues, hidden dependencies, data leakage, timing sensitivity) and is a key maintainability/reliability concern in automation programs. While execution time outliers (A) require time-series or duration metrics rather than pass/fail distributions, a result histogram primarily focuses on outcome variability, not performance. Security vulnerabilities (B) are not identifiable from outcome distributions; they require static analysis, code review, or security testing methods. Maintainability issues (D) are generally inferred from code structure metrics (complexity, duplication), change frequency, or effort trends, not from pass/fail distributions across runs. Therefore, the most likely issue identified by analyzing such a histogram is unstable automated test cases.

#### NEW QUESTION # 15

A release candidate of a SUT, after being fully integrated with all other necessary systems, has successfully passed all required functional tests (90% were automated tests and 10% were manual tests). Now, it is necessary to perform reliability tests aimed at evaluating whether, under certain conditions, that release will be able to guarantee an MTBF (Mean Time Between Failures) in the production environment higher than a certain threshold (expressed in CPU time). Which of the following test environments is BEST suited to perform these reliability tests?

- A. Preproduction environment
- B. Build environment
- C. Local development environment
- D. Integration environment

**Answer: A**

Explanation:

Reliability testing (e.g., long-duration runs, endurance/soak, stability measurements, MTBF assessment) requires an environment that closely resembles production in terms of configuration, resource allocation, deployment topology, integrations, and operational characteristics. TAE guidance emphasizes that measurements like MTBF are highly sensitive to environmental differences such as CPU quotas, background load, database sizing, network topology, virtualization settings, and monitoring agents. A local development environment is unsuitable because it is not representative, is often unstable, and typically lacks full system integration. A build environment focuses on building/packaging and fast verification, not production-like reliability evaluation. An integration environment can validate that systems work together, but it is frequently shared, changes often, and may not match production sizing and operational constraints; it is also commonly disrupted by other teams' deployments. Preproduction (often called staging) is designed to be the closest safe approximation to production while still allowing controlled testing, including reliability and performance-related evaluations, without risking real users or live data. Therefore, preproduction is the best-suited environment to run reliability tests intended to predict production MTBF behavior with credible confidence.

#### NEW QUESTION # 16

Which of the following statements about a test progress report produced for an automated test suite is TRUE?

- A. The content of the test progress report should not be affected by the stakeholders to whom the report is intended
- B. The test progress report should indicate, for each test in the suite, the timestamps related to the test steps
- C. The test progress report should indicate, for each test in the suite, the start and end timestamps of the test
- D. The test progress report should indicate the test environment in which the tests were performed

**Answer: D**

Explanation:

TAE reporting guidance emphasizes that stakeholders must be able to interpret results in context. A fundamental contextual attribute is the test environment: where the SUT was deployed, what configuration was used, and (by implication) what data and integrations were in play. Without environment identification, results can be misleading, non-reproducible, or not comparable across runs (e.g., failures caused by environment instability vs. product defects). Therefore, including the environment in the progress report is a core requirement. Option B is incorrect because TAE explicitly promotes tailoring reports to stakeholder needs; different audiences require different levels of detail, summaries, and views. Option A is generally too granular for a progress report: step-level timestamps belong more to detailed execution logs and troubleshooting artifacts, not to a progress report intended to communicate status efficiently. Option D may be included in some reports, but it is not as universally required as the environment identifier; and in TAE,

"progress report" tends to focus on overall status (what ran, what passed/failed, trends, coverage, environment) rather than per-test timing metadata. Thus, the reliably true statement is that the report should indicate the test environment.

## NEW QUESTION # 17

.....

DumpsTests is one of the leading platforms that has been helping ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) (CTAL-TAE\_V2) exam candidates for many years. Over this long time period we have helped ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) (CTAL-TAE\_V2) exam candidates in their preparation. They got help from DumpsTests ISQI CTAL-TAE\_V2 Practice Questions and easily got success in the final ISQI CTAL-TAE\_V2 certification exam. You can also trust ISQI CTAL-TAE\_V2 exam dumps and start preparation with complete peace of mind and satisfaction.

**Valid CTAL-TAE\_V2 Test Discount:** [https://www.dumpstests.com/CTAL-TAE\\_V2-latest-test-dumps.html](https://www.dumpstests.com/CTAL-TAE_V2-latest-test-dumps.html)

So you can trust CTAL-TAE\_V2 ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) practice test questions and start CTAL-TAE\_V2 exam preparation without wasting further time, We will resolve your issues related to the CTAL-TAE\_V2 practice material as soon as possible, ISQI CTAL-TAE\_V2 Discount Code It can be used on Phone, Ipad and so on, ISQI CTAL-TAE\_V2 Discount Code To the new exam candidates, it is the best way for you to hold more information, ISQI CTAL-TAE\_V2 Discount Code Because satisfied customer is the best ads, and the word of mouth communication by the customers give others more sense of credibility than any other form of marketing communication.

As you can see in the declaration, this result CTAL-TAE\_V2 is of type 'id', The first of these is the list of output registers, So you can trust CTAL-TAE\_V2 ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) practice test questions and start CTAL-TAE\_V2 exam preparation without wasting further time.

## **Pass Guaranteed Quiz ISQI Marvelous CTAL-TAE\_V2 - ISTQB Certified Tester Advanced Level - Test Automation Engineering CTAL-TAE (Syllabus v2.0) Discount Code**

We will resolve your issues related to the CTAL-TAE\_V2 practice material as soon as possible, It can be used on Phone, Ipad and so on, To the new exam candidates, it is the best way for you to hold more information.

Because satisfied customer is the best ads, and the word of mouth Cost Effective CTAL-TAE\_V2 Dumps communication by the customers give others more sense of credibility than any other form of marketing communication.
