Answer: B

Explanation:
https://docs.splunk.com/Documentation/Splunk/8.2.1/Updating/Filterclients Reference:
same/td-p/390910

NEW QUESTION # 67
A Splunk administrator has been tasked with developing a retention strategy to have frequently accessed data sets on SSD storage and to have older, less frequently accessed data on slower NAS storage. They have set a mount point for the NAS. Which parameter do they need to modify to set the path for the older, less frequently accessed data in indexes.conf?

- A. homepath
- B. colddeath
- C. summaryHomePath
- D. thawedPath

Answer: B

Explanation:
Explanation
The coldPath parameter defines the path for the cold buckets, which are the oldest and least frequently accessed data in an index1. By setting the coldPath to point to the NAS mount point, the Splunk administrator can achieve the retention strategy of having older data on slower NAS storage.

NEW QUESTION # 68
.....
