Salesforce Development-Lifecycle-and-Deployment-Architect Dumps & Development-Lifecycle-and-Deployment-Architect PDF Demo

Viel Zeit und Geld auszugeben ist nicht so gut als eine richtige Methode auszuwählen. Wenn Sie jetzt auf die Salesforce Development-Lifecycle-and-Deployment-Architect Prüfung vorbereiten, dann ist die Software, die vom Team der PrüfungFrage hergestellt wird, ist Ihre beste Wahl. Unser Ziel ist sehr einfach, dass Sie die Salesforce Development-Lifecycle-and-Deployment-Architect Prüfung bestehen. Wenn das Ziel nicht erreicht wird, bieten wir Ihnen volle Rückerstattung, um ein Teil Ihres Verlustes zu kompensieren. Bitte glauben Sie unsere Herzlichkeit! Wir wünschen Ihnen viel Glück beim Test der Salesforce Development-Lifecycle-and-Deployment-Architect!

Die Salesforce Development-Lifecycle-and-Deployment-Architect (Salesforce Certified Development Lifecycle and Deployment Architect) Prüfung ist ein Zertifizierungsprogramm, das entwickelt wurde, um das Wissen und die Fähigkeiten von Fachleuten zu testen, die sich auf die Entwicklung und Bereitstellung von Anwendungen auf der Salesforce-Plattform spezialisiert haben. Die Prüfung ist darauf ausgelegt, die Fähigkeit des Kandidaten zu testen, skalierbare und effiziente Salesforce-Anwendungen zu entwerfen, zu entwickeln und bereitzustellen sowie die gesamte Entwicklungslebenszyklus zu verwalten. Die Prüfung umfasst eine Vielzahl von Themen, einschließlich Anwendungsarchitektur, Apex-Programmierung, Datenmodellierung, Bereitstellung und Release-Management und mehr.

Salesforce Certified Development Lifecycle and Deployment Architect Development-Lifecycle-and-Deployment-Architect Prüfungsfragen mit Lösungen (Q169-Q174):

169. Frage

At any given time, Universal Containers has 10 Apex developers building new functionality and fixing bugs. Which branching strategy should an Architect recommend that mitigates the risk of developers overwriting others changes?

- **A. Have developers work in separate branches and merge their changes in a common branch for testing**
- B. Have all developers work in the same branch, continuously testing for regressions
- C. Don't use source control. Rely on Salesforce's built-in conflict detection mechanism
- D. Have all developers build new functionality in new branches, but fix bugs in the HEAD

Antwort: A

Begründung:

This is the correct answer because having developers work in separate branches and merge their changes in a common branch for testing can reduce the risk of overwriting others' changes and ensure code quality and consistency. Having all developers work in the same branch or in the HEAD may cause conflicts and errors.

Not using source control is not a good practice and may result in data loss and lack of version control.

170. Frage

Universal Containers (UC) is considering updating their Salesforce Release Management process. Which three best practices should UC consider for Release Management? Choose 3 answers

- **A. Design the right sandbox strategy for the release.**
- B. Publish a release calendar for each phase of the release.
- **C. Regression testing is mandatory for each release.**
- **D. Maintain a pre/post deployment checklist for each release.**
- E. Release sign-off is only required for Production.

Antwort: A,C,D

Begründung:

Designing the right sandbox strategy for the release is a best practice, as it helps to ensure the quality and consistency of the code/configuration across different environments. Regression testing is mandatory for each release, as it helps to verify that the existing functionality is not broken by the new changes. Maintaining a pre

/post deployment checklist for each release is a best practice, as it helps to track the tasks and dependencies for each deployment.

Release sign-off is not only required for Production, but also for other environments such as UAT and Staging. Publishing a release calendar for each phase of the release is not a best practice, as it may change due to unforeseen circumstances and create confusion.

171. Frage

Universal Containers (UC) started to use the GitHub workflow. For the current minor release, an Experience Cloud developer and a Service Cloud developer both need to work on the Case object and codes that reference the Case object. Both developers branched off the same UCDev branch (maps to the Dev sandbox for Release Build) and started working. The Experience Cloud development team had Finished early, and the change was successfully merged into the UCDev branch. The local Git branch used by the Service Cloud developer is called ServiceCase At what point will the Service Cloud developer see the conflict and need to resolve the conflict?

- A. At Command: git add force-app/main/default
- B. At command: git push origin Service Case
- C. At command: git commit -m "Service Cloud Notes"
- D. The conflict would show in GitHub when a pull request is created from Service Case to UCDev.

Antwort: D

Begründung:

The Service Cloud developer will see the conflict and need to resolve it when they create a pull request from ServiceCase to UCDev in GitHub. A pull request is a way of proposing changes to a branch and requesting a review and merge from another branch. GitHub will show any conflicts that prevent the pull request from being merged automatically, and the developer will need to resolve them manually before the merge can happen.

172. Frage

Universal Containers (UC) wants to shorten their deployment time to production by controlling which tests to run in production. UC's Architect has suggested that they run only subsets of tests. Which two statements are true regarding running specific tests during deployments? Choose 2 answers

- A. Specifying the test method is supported in DeployOptions, therefore specify only the test classes that are required to be executed.
- B. run a subset of tests, set the RunLocalTests test level on the DeployOptions object and pass it as an argument to deploy() call.
- C. To run a subset of tests, set the Run Specified Tests test level on the Deploy Options objects and pass it as an argument to deploy () call.
- D. Specify both test classes and individual test methods that are required to be executed as both are supported in DeployOptions.

Antwort: A,C

Begründung:

Explanation

To run a subset of tests, set the Run Specified Tests test level on the DeployOptions object and pass it as an argument to the deploy() call and specify only the test classes that are required to be executed, as specifying the test method is not supported in DeployOptions. These statements are true regarding running specific tests during deployments. The Run Specified Tests test level allows the developer to choose which tests to run in production, while specifying the test method is not a valid option for the DeployOptions object.

173. Frage

Universal Containers have just acquired Planetary storage. Both companies use salesforce.com to manage their sales activities. The two companies have many customers in common and the company plans to merge the two sales organizations, but the products and sales processes between the two original companies will remain different and distinct. What factor should the company consider in merging the two Salesforce.com orgs into a single org?

- A. Salespersons selling both product lines would need two logins, once for each product line
- B. Business processes on standard objects can be merged without modifications
- C. Customer data could be merged with modifications using standardization and de -duplication
- D. Transactional sales data could be combined without modification since standard objects are used

Antwort: C

Begründung:

Explanation

The most challenging factor to consider in merging the two Salesforce.com orgs into a single org is the customer data, as it may contain duplicates, inconsistencies, and conflicts. Option D suggests using standardization and de-duplication tools to merge the customer data, which is a reasonable approach. Option A is not true, as transactional sales data may have different formats, fields, and values in the two orgs. Option B is not necessary, as salespersons selling both product lines can use a single login in the merged org. Option C is not true, as business processes on standard objects may have different workflows, validation rules, and triggers in the two orgs.

174. Frage

.....

Wie andere weltberühmte Zertifizierungen wird die Development-Lifecycle-and-Deployment-Architect Zertifizierungsprüfung auch international akzeptiert. Die Development-Lifecycle-and-Deployment-Architect Zertifizierungsprüfungen haben auch breite IT-Zertifizierungen. Die Leute in der ganzen Welt wählen gerne die die Development-Lifecycle-and-Deployment-Architect Zertifizierungsprüfung, um Erfolg im Berufsleben zu erlangen. In PrüfungFrage können Sie die Ihnen geeigneten Produkte zum Lernen wählen.
