Correct Reliable CLT Exam Pdf & Leader in Qualification Exams & Pass-Sure Test CLT Pass4sure

Do you often envy the colleagues around you can successfully move to a larger company to achieve the value of life? Are you often wondering why your classmate, who has scores similar to yours, can receive a large company offer after graduation and you are rejected? In fact, what you lack is not hard work nor luck, but CLT Guide question. With CLT question torrent, you will suddenly find the joy of learning and you will pass the professional qualification exam very easily.

MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q15-Q20):

NEW QUESTION # 15
Which method calls for the use of a plan that reorders products once inventory of that product falls below a certain predetermined amount?

- A. Cycle ordering system
- B. Fixed-order quantity system
- C. Perpetual inventory system
- D. Material requirements planning

Answer: B

Explanation:
The Fixed-Order Quantity System (also known as the reorder point system) triggers replenishment when stock levels drop below a predetermined threshold. According to the CLT "Inventory Control" section, this system ensures continuity of supply by setting reorder points based on historical demand, lead time, and safety stock. When the threshold is reached, a fixed quantity of inventory is ordered, maintaining consistency and stability in replenishment cycles. This differs from Material Requirements Planning (MRP), which forecasts based on production schedules, and from Cycle Ordering, which orders at fixed intervals rather than quantity triggers. CLT emphasizes that reorder point management is essential for balancing service levels with inventory costs. It requires accurate data tracking, typically via Warehouse Management Systems (WMS), to automatically generate purchase or transfer orders when reorder points are met.

NEW QUESTION # 16
Generally speaking, ASRS refers to a variety of computer-controlled methods for

- A. moving pallets to the shipping dock
- B. picking loads from a conveyor
- C. automatically depositing and retrieving loads from defined storage locations
- D. automatically loading trucks

Answer: C

Explanation:
The Automated Storage and Retrieval System (AS/RS) is a mechanized system that places and retrieves materials in defined storage locations using computer-controlled cranes, shuttles, or lifts. The CLT's "Product Storage" competency defines AS/RS as a key component of automated warehouse design, improving space utilization, accuracy, and cycle time. Unlike conveyors or dock systems, AS/RS focuses on vertical and high-density storage environments where automation handles pallet or tote movements to minimize manual labor. Proper integration of AS/RS supports just-in-time inventory and efficient order processing by ensuring that stored goods can be quickly and precisely accessed as needed.

NEW QUESTION # 17
Which of the following statements is an example of ways to reduce the cost of transportation?

- A. increase the number of pickups
- B. increase number of shipments
- C. increase the number of parcels
- D. increase consolidation of shipments

Answer: D

Explanation:
CLT emphasizes that transportation cost is reduced by increasing load utilization and reducing the number of shipments. Shipment consolidation means combining smaller shipments into full loads-lower per-unit cost, fewer trips, better utilization of equipment. Options A/B/C all tend to raise handling/shipping costs; D is the correct cost-saving strategy.

NEW QUESTION # 18
Which of the following includes information about trailer loading schedule?

- A. Shipping Manifest
- B. Shipping Order
- C. Bill of Lading
- D. Dispatch List

Answer: D

Explanation:
The dispatch list provides the trailer loading schedule used by dock supervisors to control the outbound workflow. CLT "Dispatch and Tracking" defines this list as a time-based coordination tool that identifies when each outbound trailer should arrive, be loaded, and depart. It helps balance labor, equipment, and dock-door availability. While the Shipping Manifest details the cargo already loaded, the dispatch list focuses on planning and sequencing. The Bill of Lading becomes effective only after loading is complete. The CLT stresses disciplined scheduling as essential to maintaining carrier appointment windows and reducing dwell time. Effective use of dispatch lists supports just-in-time shipping operations and maximizes dock efficiency.

NEW QUESTION # 19
A characteristic typical of an effective inventory management system is

- A. holding only enough inventory to fill half of the demand
- B. an excessively small inventory level to minimize costs
- C. a sufficient quantity of goods is kept on hand and reordering is performed when necessary
- D. maintaining an inventory level that fills storage space to capacity

Answer: C

Explanation:
Effective systems balance service level and cost. They maintain enough stock to meet demand through lead time (with safety stock where appropriate) and trigger timely reorders using methods like reorder points, EOQ, or min/max. Extremes-chronic under-stocking (stockouts) or over-stocking (excess carrying cost, obsolescence)-are specifically cautioned against in CLT guidance.
