## CTFL-AcT Test Questions - Test CTFL-AcT Cram Review

You can become more competitive force in the job hunting market and you can also improve your ability in the process of getting a

certificate. CTFL-AcT study materials of us will help you get the certificate successfully. With experienced experts to compile CTFL-AcT study materials, they are high-quality and accuracy, and you can pass the exam just one time. Moreover, we offer you free demo, and you can have a try before buying CTFL-AcT Exam Dumps, so that you can have a better understanding of what you are going to buy.

## ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Which one of the following statements about the relation between business goals, business needs and requirements is true?

- A. Once the business requirements are elicited, business analysts start to formalize business goals for the project.
- **B. Business goals, business needs and requirements describe, at different levels of abstraction, what shall be archived**
- C. Business requirements are generally developed by refining product requirements.vhbj
- D. Business goals can be extracted from product requirements

**Answer: B**

Explanation:

The relationship between business goals, business needs, and requirements is hierarchical and reflects increasing levels of specificity: Business Goals: High-level strategic objectives.

Business Needs: Problems or opportunities that must be addressed to achieve those goals.

Requirements: Specific capabilities or conditions the system must satisfy to meet the needs.

Option B is correct because it accurately describes how these elements relate at different abstraction levels in the requirements hierarchy. This relationship is fundamental to business analysis and accepted by standards like BABOK and ISTQB.

Other options:

A is reversed - business goals usually precede and drive the elicitation of requirements.

C and D misrepresent the sequence - product requirements are derived from business goals and needs, not the other way around.

B). Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved

### NEW QUESTION # 47

Which one of the following statements describes the collaboration between business analysts and testers BEST?

- **A. Business analysts collaborate on test planning and risk analysis to ensure that further on, appropriate test cases are developed and prioritized.**
- B. Testers participate in identifying business needs of stakeholders to better understand the business needs and related requirements.
- C. Business analysts usually cannot review acceptance tests, because they do not understand the technical details.
- D. Once the requirements and acceptance criteria have been defined, business analysts are no longer involved in testing activities.

**Answer: A**

Explanation:

The ISTQB CTFL Acceptance Testing Syllabus emphasizes the importance of collaboration between business analysts and testers throughout the testing lifecycle, especially during test planning and risk identification.

Business analysts contribute domain knowledge and business context, which is crucial in identifying business- critical areas, defining priorities, and ensuring that acceptance tests align with business goals.

Option A correctly identifies this collaboration. During test planning, business analysts help define acceptance criteria, identify risks from a business perspective, and support test prioritization to focus on high-value features. Their early involvement ensures that acceptance tests are meaningful and support stakeholder expectations.

Option B is incorrect as business analysts actively review acceptance tests to confirm alignment with business rules, regardless of technical complexity.

Option C is inaccurate because although testers seek to understand business needs, the responsibility for identifying those needs lies with business analysts.

Option D is incorrect; business analysts remain engaged throughout the project lifecycle, including test support and defect triage.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.4):

"Testers and business analysts collaborate during test planning and analysis activities to ensure the tests meet business needs and risk areas are adequately covered." Therefore, A provides the most accurate and comprehensive description.

### NEW QUESTION # 48

Assume you would like to create a model describing a loan request process in a bank.

The loan request process starts when the customer submits a loan application. The bank then reviews the application. Regardless of whether the loan request is approved or not, a letter is sent to inform the customer of the decision. If the request is approved, the loan contract is created.

You have drawn the following business process model using BPMN 2.0.

Which one of the following sentences is true with respect to this process model?

- A. Verifying employment is not done when the loan status is rejected.
- B. Performing title search and requesting credit report are sequential tasks.
- C. A review credit report is optional when reviewing the loan application.
- D. Creating the loan contract is defined as a sub-process.

**Answer: D**

Explanation:

Comprehensive Detailed Explanation (Approx. 200-220 words):

In the first BPMN diagram (Loan Request Process), the process starts with the receipt of a loan application.

Then, parallel gateways (indicated by the "+" symbols) are used to trigger three separate evaluations:

verifying employment, requesting and reviewing a credit record, and performing and reviewing a title search.

These are executed concurrently, not sequentially.

After all checks are completed, the loan application is reviewed. A decision gateway (diamond with an "X") checks whether the loan is approved. Depending on the decision:

If approved: a loan approval letter is sent, and a sub-process is triggered (represented by the rectangle with a

"+" symbol inside), which is the creation of the loan contract. This is what identifies it as a BPMN "sub- process." If rejected: a rejection letter is sent.

In both cases, the process ends after customer notification.

Evaluation of answer options:

A: Incorrect - the verification steps occur before the loan status is determined.

B: Correct - the "Create the loan contract" activity has a "+" symbol, indicating a sub-process.

C: Incorrect - the parallel gateway means these tasks are executed concurrently, not sequentially.

D: Incorrect - all review activities are mandatory prior to application review.

Therefore, B is the correct answer.

### NEW QUESTION # 49

Which of the following relations between business rule modeling and ATDD is correct?

- A. Application workflow models facilitate the generation of ATDD acceptance test cases
- B. In ATDD business rule models are defined prior to business process models
- C. Business rules are described using the Gherkin language also used in ATDD
- D. By writing business rules models, stakeholders commit to the ATDD approach

**Answer: A**

Explanation:

In Acceptance Test-Driven Development (ATDD), test cases are derived early and are based on business understanding.

Application workflows modeled using BPMN or similar notations provide a clear, visual representation of how a user interacts with a system and which business rules are applied.

Option D is correct because these workflow models help define acceptance test cases by outlining the process paths, user

interactions, and decision points. These visual models bridge the gap between business needs and testing.

Other options:

A is incorrect - business rule and process models are created based on need; one doesn't necessarily precede the other.

B is misleading - writing business rule models doesn't imply stakeholder commitment to ATDD.

C is incorrect - Gherkin is used for writing scenarios in BDD/ATDD, but business rules are typically modeled using DMN, not Gherkin.

D). Application workflow models facilitate the generation of ATDD acceptance test cases

### NEW QUESTION # 50

Which tool fits the mentioned acceptance test activities BEST?

- **A. Business process management tools for modeling business processes and rules.**
- B. Requirements management tools for managing acceptance test execution campaigns.
- C. Model-based testing tools for managing incidents.
- D. Test management and automation tools for business process model-based acceptance test generation.

**Answer: A**

Explanation:

Acceptance testing often relies on understanding and validating business processes and business rules. These are typically visualized and documented using business process modeling techniques such as BPMN (Business Process Model and Notation) and decision tables (DMN - Decision Model and Notation).

Business Process Management (BPM) tools are specifically designed for modeling and managing such workflows and rules. These tools are commonly used during acceptance test design to align tests with business objectives and processes.

Option C is correct because it directly aligns with the use of business process modeling in acceptance testing activities.

Other options:

A is incorrect because requirements management tools are more focused on requirement traceability and prioritization, not managing test execution campaigns.

B confuses roles - test management/automation tools can assist with test generation, but "business process model-based" generation is more accurately linked to BPM or model-based testing tools.

D is incorrect - model-based testing tools are used for test case generation, not incident management.

C). Business process management tools for modeling business processes and rules.

### NEW QUESTION # 51

.....

Once you have decided to purchase our CTFL-AcT study materials, you can add it to your cart. Then just click to buy and pay for the certain money. When the interface displays that you have successfully paid for our CTFL-AcT study materials, our specific online sales workers will soon deal with your orders. You will receive the CTFL-AcT study materials no later than ten minutes. You need to ensure that you have written down the correct email address. Please check it carefully. If you need the invoice, please contact our online workers. They will send you an electronic invoice, which is convenient. You can download the electronic invoice of the CTFL-AcT Study Materials and reserve it.
