EMC Dell PowerEdge Foundations v2 Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which server attribute refers to its ability to undergo maintenance and repairs without causing system downtime?

- A. Scalability
- B. High availability
- C. Reliability
- D. Serviceability

Answer: B

Explanation:

High availability refers to a server's design that allows maintenance, repairs, and upgrades without interrupting operations, achieved through redundant components like power supplies, fans, and hot-swappable parts. This ensures continuous uptime critical for business environments. Reliability focuses on failure resistance, serviceability on ease of repair, and scalability on expansion. High availability is key for mission- critical PowerEdge servers. Exact extract: "Define the characteristics of a server... Explain the power distribution considerations... Describe maintenance functions, shutdowns, reboots of a PowerEdge Server." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Introduction to Servers (28%) and Maintenance (18%).

NEW QUESTION # 13

Which sequence of components represents an initial segment of a typical flow of data (I/O) in a PowerEdge 670 server from input to data being temporarily stored for active use?

- A. LAN -> Disk Drive -> Memory Module
- B. CPUs -> Memory Module -> NIC
- C. LAN -> NIC -> Memory Module
- D. NIC -> CPUs -> Disk Drive

Answer: C

Explanation:

In a PowerEdge 670 server, the typical I/O flow starts with data entering via the LAN, processed by the Network Interface Card (NIC), and then moved to the Memory Module for temporary storage and active use by the system. This sequence reflects how network data is received and staged in RAM for processing. CPUs process data after memory, and disk drives are for persistent storage, not initial flow. This aligns with server architecture for efficient data handling. Exact extract: "Describe the Memory and Expansion cards... Explain how different PowerEdge server models are better suited for specific roles." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Server Architecture and Roles (22%).

NEW QUESTION # 14

From which attack does TPM protect information that is stored in hardware?

- A. Physical theft
- B. Overwriting by another application
- C. External software attacks
- D. Insider threat

Answer: C

Explanation:

The Trusted Platform Module (TPM) in PowerEdge servers protects hardware-stored information, such as cryptographic keys, from external software attacks by providing a secure environment for encryption and authentication. TPM safeguards against unauthorized access via software exploits, not insider threats, application overwrites, or physical theft (which requires physical security measures). This enhances server security for sensitive data. Exact extract: "Describe the security features in PowerEdge servers... Explain the role of TPM and Secure Boot." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Security (18%).

NEW QUESTION # 15

Power supply unit 2 (PSU 2) on a Dell PowerEdge R760 server has been losing power several times a day.
The system administrator is planning to replace the power supply but is unsure which power supply is referenced as PSU 2. What is

the most reliable way for the system administrator to visually identify PSU 2?

- A. Use the iDRAC web UI to activate the blink option for PSU 2's LED
- B. Assume PSU 2's LEDs are off because the iDRAC has disabled it
- C. Check the chassis label near the power supplies for PSU numbers
- D. Look for a constant amber LED on PSU 1, indicating a problem with that unit

Answer: C

Explanation:
The most reliable way to identify PSU 2 on a PowerEdge R760 is to check the chassis label near the power supplies, which clearly marks PSU numbers for accurate identification. This physical label ensures certainty without assumptions. Using iDRAC to blink LEDs is useful but less direct, assuming LEDs are off is unreliable, and checking PSU 1's LED does not identify PSU 2. Exact extract: "Describe maintenance functions, shutdowns, reboots of a PowerEdge Server... Explain the power distribution considerations." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Maintenance (18%).

NEW QUESTION # 16
A server has a PCIe 5.0 x1 lane. What is the theoretical bandwidth?

- A. 1.97 GB/s
- B. 7.88 GB/s
- C. 3.94 GB/s
- D. 0.98 GB/s

Answer: C

Explanation:
PCIe 5.0 offers a per-lane bandwidth of approximately 3.94 GB/s for an x1 lane. This is calculated based on PCIe 5.0's data rate of 32 GT/s, with each lane providing roughly 32 Gbps (4 GB/s) after accounting for encoding overhead (128b/130b). For an x1 lane, this results in 3.94 GB/s, making it the correct answer for PowerEdge server configurations leveraging PCIe 5.0 for high-speed connectivity. Other options reflect incorrect calculations or older PCIe versions. Exact extract: "Describe the Memory and Expansion cards...
Compare the on-board network on a PowerEdge Server." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Server Architecture and Roles (22%).
