MB-820 Latest Test Cram - MB-820 Exam Voucher

Customers first are our mission, and we will try our best to help all of you to get your MB-820 certification. We offer you the best valid and latest Microsoft MB-820 study practice, thus you will save your time and study with clear direction. Besides, we provide you with best safety shopping experience. The Paypal system will guard your personal information and keep it secret. In addition, the high pass rate will ensure you pass your MB-820 Certification with high score.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q122-Q127):

NEW QUESTION # 122

You need to assist the development department with setting up Visual Studio Code to design the purchase department extension, meeting the quality department requirements.

How should you complete the app.json file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Development environment configuration

NEW QUESTION # 123

You need to define the data types for the fields of the N on-conformity table.

Which two data types should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Date Time for the Non-Conformity Date field
- B. Integer for the N on-conformity Number field
- C. Code for the Non-Conformity Number field
- D. Char for the Non-Conformity Number field
- E. Date for the Non-Conformity Date field

Answer: C,E

NEW QUESTION # 124

You need to store an uploaded PDF document in a Business Central table field.

Which field data type should you use?

- A. Media
- B. Text[2048]
- C. Code[250]
- D. Blob

Answer: D

Explanation:

Blob fields store binary large objects such as documents and can be read and written with InStream and OutStream variables.

Media and MediaSet fields are optimized for images that are displayed in the client and stored in the tenant media repository. Text and Code fields are limited to short character data.

NEW QUESTION # 125

A company uses Azure Application Insights for Business Central online in its production environment.

A user observes that some job queues go into the failed state and require manual intervention.

You need to analyze job queue lifecycle telemetry.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Kusto Query Language (KQL) job queue analysis code segment

Explanation:

Kusto Query Language (KQL) job queue analysis code segment

KQL Code Segment:

* First command (traces):

* The query begins with traces to analyze telemetry data logs. The next command determines how the results are filtered or displayed.

* take 100: This is the correct option to retrieve the top 100 rows from the traces table.

* Command for selecting fields:

* project: This command is used to select specific fields from the telemetry data, allowing you to retrieve and display only the fields relevant to the job queue telemetry.

* The correct answer is project, as it allows you to choose fields like jobQueueObjectId, jobQueueObjectType, etc., from the customDimensions table.

NEW QUESTION # 126

Case Study 3 - Fabrikam Inc

Company background and technical environment

Current environment

Fabrikam Inc. is a medium-sized company that plans to implement Dynamics 365 Business Central as an ERP system. The company has a development department that will help with the ERP implementation.

Most employees work remotely from different countries or regions and speak different languages.

The various locations and languages cause issues with the current on-premises software.

Planned improvements

Fabrikam Inc. plans to implement new and modern software to manage the company. The company wants to use Business Central because it is cloud-based and meets all company requirements.

The company intends to improve reporting and integration functionality by using modern tools such as Power BI and APIs. To reduce the amount of information sent by email, the company plans to expose vendor information to be consumed from external users.

Technical specifications

The development department installed Visual Studio Code to create Business Central extensions so the ERP system could be customized according to company needs. All extensions must be developed for the Business Central 2024 wave 1 online version.

The development department plans to use telemetry to control the appropriate use of each new development and works directly in licensed sandbox environments supplied by Microsoft.

Department-specific requirements

The following departments at Fabrikam Inc. have multiple requirements:

- Development
- Control
- Accounting
- Quality

Development department

The development department designed an extension for the purchase department. Because the developers plan to work with telemetry for monitoring operations, they need the Application Insights information. To accomplish this, the department must add a setting in the corresponding file.

The quality department does not want to receive any warning about the Application Insights setting when the extension is compiled.

Control department

The control department requires customizations to Business Central by using a per-tenant extension (PTE) named Subcontract Docs. The PTE includes a table named Subcontract Documents. The table has the following fields:

ID: A unique identifier

Subcontract No.: Related to the standard Vendors table

Description: A short description of a received document

Document: A media type that has the document

Comments: Comments about the document

Date: When the document was imported

Amount: Amount related with the imported document

Posted: Indicates if the document is managed

The extension must be in English - United States (ENU) and Spanish Traditional Sort (ESP) so the application can be used in both languages. The translations must be on the table, not on the page, to avoid repeating them. The control department does not want to use translation files.

The control department manager requires a brief guide for the Description and Comments fields when employees create a new record so users know what to include in the fields. The guide must disappear as soon as users add a value in the fields.

The Subcontract Documents table must be displayed on a new page named Subcontract Document List through an action from the standard Vendor page.

The Amount field, included in the Subcontract Document List, must be formatted in bold format when the record is posted (field Posted = true).

The control department also requires a report to display a list of subcontract documents named Subcontract Documents Excel List. The report must meet the following requirements:

- Downloads a file only in Microsoft Excel.
- Includes a predefined format with two worksheets: one with the posted subcontract documents and another with the unposted

subcontract documents.

Accounting department

The accounting department plans to use Power BI to analyze information generated by the control department. The accounting department plans to expose an API named API Customer Lines. To improve the performance, the API must use read-only information and work with a Query object to summarize the data.

You have the following code:

```
1 query 50100 MyQuery
2 {
3     QueryType = API;
4     APIPublisher = 'Fabrikam';
5     APIGroup = 'Accounting';
6     APIVersion = 'beta';
7     EntityName = 'customer';
8     EntitySetName = 'customers';
9     elements
10    {
11        dataitem(customer; Customer)
12        {
13            column(customer_Number; "No.")
14            {
15                {
16                    column(customer_Name; Name)
17                    {
18                        {
19                            dataitem(salesLine; "Sales Line")
20                            {
21                                DataItemLink = "Sell-to Customer No." = customer."No.";
22                                SqlJoinType = InnerJoin;
23                                column(qty; "Outstanding Quantity")
24                                {
25                                    {
26                                    }
27                                }
28                            }
29                        }
30                    }
31                }
32            }
33        }
34    }
35 }
```

The accounting department must expose data such as the following:

customer_Number	customer_Name	qty
20000	Selangorian Ltd.	900
30000	Blanemark Hifi	500
40000	Deerfield Graphics	250

The qty column must be the sum of the Outstanding quantity field of Sales Order Lines. It must be in descending order by quantity.

The department also exposes a page named Fabrikam Vendor API that includes vendor information from the Vendor table, such as number and name. The API must use the replica database to improve performance.

Because Fabrikam Inc. is based in multiple countries and regions, the company periodically must send accounting movements between two dates to the local tax offices named Fabrikam Accounting.

The format for this file must be an XML file generated by an XMLport object. For security reasons, it is not possible to receive data from this XMLport.

The generated XML file must have a schema like this:

```
<?xml version="1.0" encoding="UTF-16" standalone="no"?>
<root>
  <documentation>
    <date>01/17/23</date>
    <amount>-128.40</amount>
    <accountNo>14130</accountNo>
  </documentation>
  <documentation>
    <date>01/17/23</date>
    <amount>128.40</amount>
    <accountNo>50110</accountNo>
  </documentation>
</root>
```

Quality department

The quality department requires that every new app or extension is designed to meet standard company guidelines. The quality department plans to follow the standard Business Central data model. The quality development must be able to use triggers correctly.

The department must ensure that when a vendor is deleted, the system also removes each record in the Subcontract Documents table related to the vendor. If the subcontract document record has the field Posted = false, it must not be possible to delete the record.

The department has a version 1.0.0.1 installed for an extension named Quality Control. The department develops a new version 1.0.0.2 and uses a codeunit with the subtype Upgrade to update it. The department requires the values for AppVersion and DataVersion on the trigger OnUpgradePerCompany after using NavApp.GetCurrentModuleInfo(myinfo).

Hotspot Question

You need to assist the development department with setting up Visual Studio Code to design the purchase department extension, meeting the quality department requirements.

How should you complete the app.json file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Development environment configuration

```
{
  -----
  "applicationInsightsConnectionString": "InstrumentationKey=243d2dc8-60e2...",
  "applicationInsightsKey": "InstrumentationKey=243d2dc8-60e2...",
  "target": "Cloud",
  "runtime": "13.0",
  -----
}
```
