Salesforce Order Management Administrator Accredited Professional Sample Questions (Q57-Q62):

NEW QUESTION # 57

A company has multiple fulfillment centers that they want to utilize when orders are fulfilled. The administrator is tasked with minimizing the distance from fulfillment center to delivery location. How can this be accomplished?

- A. Ask a developer to create an Apex Action that can determine the closest fulfillment location
- B. Modify the Fulfillment Location Search process to search by closest distance instead of least number of splits
- **C. Add the "Order Routing Rank By Closest Distance" action to the fulfillment flow**
- D. Create a Workflow Rule on the Fulfillment Order object that utilizes the Order Management workflow field update actions

Answer: C

Explanation:

The best way for the administrator to accomplish this task is to add the "Order Routing Rank By Closest Distance" action to the fulfillment flow. This action is a flow core action that ranks the fulfillment locations by their distance from the delivery location, and returns a list of ranked locations. The administrator can use this action to find the optimal fulfillment location for each order based on proximity. Verified References:

NEW QUESTION # 58

Which three components can be used to modify the user experience in the Order Summary detail page?

- **A. Accordion**
- B. Related List - Double
- **C. Tabs**
- **D. Related List-Single**

Answer: A,C,D

Explanation:

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record.

A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.

NEW QUESTION # 59

A customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management. Later, the customer returns one of the products. Which objects will be created in Order Management?

- A. A Change Order object and Cancel Order Object
- B. A Cancel Order object and Return Order object
- C. The Order Summary object and Change Order object
- **D. A Return Order object and Change Order object**

Answer: D

Explanation:

The objects that will be created in Order Management when a customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management, and then returns one of the products are:

A Return Order object. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.

A Change Order object. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc.

NEW QUESTION # 60

What are two ways an administrator can query Order Summaries using APIs in Workbench?

- A. Apex API
- **B. Platform API**
- C. Connect API
- D. Invocable API
- **E. Composite API**

Answer: B,E

Explanation:

Two ways that an administrator can query Order Summaries using APIs in Workbench are:

Platform API. The Platform API is a set of REST and SOAP APIs that allow developers to access data and functionality in Salesforce from external systems. The Platform API includes various resources and operations for querying, creating, updating, or deleting records in Salesforce, such as Order Summaries. The administrator can use the Platform API in Workbench by selecting the REST Explorer or SOAP Explorer tabs, and entering the appropriate request URL and parameters.

Composite API. The Composite API is a type of REST API that allows developers to execute multiple subrequests in a single HTTP request. The Composite API includes various resources and operations for batching, tree, sObject collections, or transactions in Salesforce, such as Order Summaries. The administrator can use the Composite API in Workbench by selecting the REST Explorer tab, and entering the appropriate request URL and JSON body.

Verified References: https://developer.salesforce.com/docs/atlas.en-us.api_rest.meta/api_rest/intro_what_is_rest_api.htm https://developer.salesforce.com/docs/atlas.en-us.api_rest.meta/api_rest/resources_composite.htm

NEW QUESTION # 61

What two tools can an administrator use to debug an issue with an Apex trigger?

- A. Log Inspector in the Developer Console
- B. Error Logs in the Developer Console
- C. Apex Logs in Setup
- D. Debug Logs in Setup

Answer: A,D

Explanation:

The administrator can use two tools to debug an issue with an Apex trigger: Log Inspector in the Developer Console and Debug Logs in Setup. The Log Inspector is a tool that displays a graphical representation of a debug log, which is a record of database operations, system processes, and errors that occur when executing a transaction or running unit tests. The Log Inspector helps you analyze and troubleshoot your code by highlighting errors, checkpoints, and execution times. The Debug Logs page in Setup lets you monitor and retain debug logs for users, Apex classes, Apex triggers, and Lightning components. You can view, download, or delete debug logs from this page.
