Reliable ISACA CISM Study Guide, New CISM Dumps Questions

ISACA dumps are designed according to the ISACA CISM certification exam standard and have hundreds of questions similar to the actual CISM exam. TestPDF Certified Information Security Manager (CISM) web-based practice exam software also works without installation. It is browser-based; therefore no need to install it, and you can start practicing for the Certified Information Security Manager (CISM) exam by creating the ISACA CISM practice test.

The CISM certification exam is a computer-based exam that consists of 150 multiple-choice questions. CISM exam is divided into four domains: Information Security Governance, Information Risk Management, Information Security Program Development and Management, and Information Security Incident Management. Candidates have four hours to complete the exam, and a passing score of 450 out of 800 is required.

The CISM certification provides numerous benefits to information security professionals. It validates their expertise in information security management and provides a competitive edge in the job market. It also demonstrates a commitment to professional development and ongoing learning, as CISM holders must earn continuing education credits to maintain their certification. The CISM certification is recognized by employers and clients worldwide, and it is often a requirement for high-level information security management positions.

ISACA Certified Information Security Manager Sample Questions (Q536-Q541):

NEW QUESTION # 536

The decision as to whether a risk has been reduced to an acceptable level should be determined by:

- A. international standards.
- B. organizational requirements.
- C. information security requirements.

- D. information systems requirements.

Answer: B

Explanation:

Section: INFORMATION RISK MANAGEMENT

Explanation:

Organizational requirements should determine when a risk has been reduced to an acceptable level.

Information systems and information security should not make the ultimate determination. Since each organization is unique, international standards of best practice do not represent the best solution.

NEW QUESTION # 537

Which of the following is the MOST important reason to develop an organizational threat profile?

- **A. To support risk treatment decisions**
- B. To develop threat briefings for senior management
- C. To support business cases for information security investments
- D. To implement a proactive approach for threat management

Answer: A

NEW QUESTION # 538

The fundamental purpose of establishing security metrics is to:

- A. establish security benchmarks
- **B. provide feedback on control effectiveness**
- C. increase return on investment (ROI)
- D. adopt security best practices

Answer: B

Explanation:

Security metrics are used to measure the effectiveness of controls and evaluate the overall security posture of an organization. This feedback provides an understanding of the progress made towards achieving security objectives and allows organizations to make necessary adjustments.

NEW QUESTION # 539

When collecting admissible evidence, which of the following is the MOST important requirement?

- A. Due diligence
- **B. Chain of custody**
- C. Need to know
- D. Preserving audit logs

Answer: B

NEW QUESTION # 540

When a user employs a client-side digital certificate to authenticate to a web server through Secure Socket Layer (SSL), confidentiality is MOST vulnerable to which of the following?

- A. Man-in-the-middle attack
- B. Repudiation
- **C. Trojan**
- D. IP spoofing

Answer: C
