Which actions can be done within InfoSight Cross-Stack Analytics for VMware and Hyper-V? (Choose two.)

- A. Locate inactive VMs
- B. Modify administrative privileges
- C. Find noisy neighbors
- D. Review backup schedules
- E. View replication policies

**Answer: A,C**

Explanation:

HPE InfoSight Cross-Stack Analytics for VMware and Hyper-V provides a comprehensive view of the virtual environment, allowing users to monitor and analyze various aspects of their infrastructure. Two key actions that can be performed within this tool are finding noisy neighbors (Option B) and locating inactive VMs (Option C).

Find noisy neighbors: This feature helps identify virtual machines (VMs) that are consuming excessive resources and negatively impacting the performance of other VMs within the environment. By identifying these "noisy neighbors," administrators can take corrective action to optimize resource allocation and improve overall system performance.

Locate inactive VMs: This functionality allows administrators to detect VMs that are consuming resources but are not actively in use. Identifying and addressing these inactive VMs can help free up resources and improve the efficiency of the virtual environment. These capabilities make InfoSight Cross-Stack Analytics a powerful tool for maintaining optimal performance in VMware and Hyper-V environments.
