Real SAP C-TS414-2023 PDF Questions - Great Tips

Achieving success in the SAP C-TS414-2023 certification exam opens doors to lucrative job opportunities and career advancements. The SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management (C-TS414-2023) credential is highly valuable in today's industry. However, many candidates face the frustration of exam failure and wasted time and resources by relying on outdated SAP C-TS414-2023 Practice Questions. To save both time and money, it is crucial to prepare with the most up-to-date and reliable C-TS414-2023 exam questions.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q39-Q44):

NEW QUESTION # 39

The catalog profile contains a subset of code groups and codes from different catalog types. Where can you assign the catalog profile? Note: There are 3 correct answers to this question.

- A. In the quality management view of the material master
- B. In the customizing settings for the inspection type
- C. In the customizing settings for the notification type
- D. In the master inspection characteristic
- E. In the customizing settings for the report type

Answer: A,B,C

Explanation:

A catalog profile in SAP S/4HANA QM defines a collection of code groups and codes from various catalog types (e.g., defects, usage decisions) for use in quality processes. It can be assigned at multiple levels:

* In the Quality Management View of the Material Master (A): The catalog profile is assigned in the QM view of the material master (transaction MM01/MM02, field QMAT-PROF) at the plant level. This links it to inspection lots for that material, controlling defect recording or UD codes.

* In the Customizing Settings for the Notification Type (B): In Customizing (SPRO > Quality Management > Quality Notifications > Notification Creation > Define Notification Types), you can assign a catalog profile to a notification type (e.g., Q1 for customer complaints). This determines the codes available during notification processing.

* In the Customizing Settings for the Inspection Type (C): In Customizing (SPRO > Quality Management > Quality Inspection > Inspection Lot Creation > Maintain Inspection Types), a catalog profile can be linked to an inspection type (e.g., 01 for goods receipt). This governs the codes used in inspection lots of that type.

* In the Master Inspection Characteristic (D): MICs (transaction QS21) use individual code groups or selected sets, not catalog profiles directly.

* In the Customizing Settings for the Report Type (E): Report types (used in defect recording layouts) reference catalog profiles indirectly via other objects, not as a direct assignment.

Thus, the correct answers are "A, B, C," as these are the standard assignment points. References: SAP Help Portal - "Catalog Profiles in QM"; SAP S/4HANA QM Customizing Guide - "Notification and Inspection Types".

NEW QUESTION # 40

For which business objects can you record defects? Note: There are 2 correct answers to this question.

- A. Inspection characteristics
- B. Business partners
- C. Quality certificates
- D. Inspection lots

Answer: A,D

Explanation:

Defect recording in SAP QM (e.g., transaction QF01 or QE51N) is tied to specific objects:

* Inspection Lots (A): Defects are recorded directly against an inspection lot (e.g., during results recording), linking to the lot's context (e.g., material, supplier).

* Inspection Characteristics (B): Within an inspection lot, defects can be recorded at the characteristic level (e.g., a specific MIC fails), allowing detailed defect analysis.

* Business Partners (C): Defects aren't recorded against suppliers/customers directly; they're tied to lots or notifications.

* Quality Certificates (D): Certificates document results, not serve as objects for defect recording.

Thus, "Inspection lots" and "Inspection characteristics" are the correct answers. References: SAP Help Portal - "Defects Recording in QM"; SAP S/4HANA QM User Guide - "Defect Management".

NEW QUESTION # 41

you can assign combination of material number and plants to one inspection plan Which organization structure must the plants share for correct cost collection in the inspection handlings ?

- A. Company code
- B. Purchase organization
- C. Controlling Area
- D. Sales organization

Answer: C

NEW QUESTION # 42

Your customer automatically create inspection lot for general deliveries in sales and distribution process for its production If QM not started result recording what does the system do in response to a change in the material quality.....

- A. Create a new inspection lot with the different quantity
- **B. Cancel the current inspection lot and create a new one**
- C. Block the current inspection lot from processing
- D. Change the quality of the current inspection lot

Answer: B

NEW QUESTION # 43

Which of the following assignments of document types to master data objects is available in SAP standard?

Note: There are 2 correct answers to this question.

- A. Quality assurance agreements to materials
- **B. Quality assurance agreements to quality info records: Procurement**
- C. Technical delivery terms to quality info records: Procurement
- **D. Technical delivery terms to materials**

Answer: B,D

Explanation:

In SAP S/4HANA QM, the Document Management System (DMS) supports linking document types to master data objects for reference:

* Quality Assurance Agreements to Quality Info Records: Procurement (A): In the quality info record (transaction QI01), you can assign a DMS document type (e.g., QAA) for quality assurance agreements with suppliers. This is standard for procurement QM (SPRO > QM > Environment > Document Management).

* Technical Delivery Terms to Materials (C): Technical delivery terms (e.g., shipping instructions) can be linked to the material master via DMS (transaction MM01/MM02), typically in the Basic Data or QM view, as a standard feature.

* Quality Assurance Agreements to Materials (B): QA agreements are supplier-specific and linked to quality info records, not directly to materials in standard SAP.

* Technical Delivery Terms to Quality Info Records: Procurement (D): Delivery terms are material- specific, not typically assigned to quality info records in standard configuration.

Thus, "A" and "C" are the correct answers, reflecting SAP standard assignments. References: SAP Help Portal

- "DMS in Quality Management"; SAP S/4HANA QM Configuration Guide - "Document Types".

NEW QUESTION # 44

.....
