Valid Test E_S4CPE_2405 Tips | E_S4CPE_2405 Free Vce Dumps

DumpsReview guarantee the best valid and high quality SAP study guide which you won't find any better one available. E_S4CPE_2405 training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our E_S4CPE_2405 free demo which allows you free download, you can see the validity of the questions and format of the E_S4CPE_2405 actual test. In addition, the price of the E_S4CPE_2405 dumps pdf is reasonable and affordable for all of you.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q29-Q34):

NEW QUESTION # 29

Which of the following tasks are included in the SAP S/4HANA Cloud Private Edition standard services delivered by SAP for a new implementation? Note: There are 3 correct answers to this question.

- A. Implementing customizations to the SAP Best Practices business processes
- B. Provisioning a client with the desired client setup alternative
- C. Activating required business functions in client 000
- D. Activating SAP Best Practices content in the system
- E. Configuring the SAP Best Practices business processes

Answer: B,D,E

Explanation:

SAP provides standard services under RISE with SAP for a new implementation of SAP S/4HANA Cloud Private Edition. Let's evaluate:

* A. Configuring the SAP Best Practices business processes: This is correct. SAP standard services include configuring Best Practices processes (e.g., order-to-cash) based on customer requirements, typically during the Realize phase.

* B. Provisioning a client with the desired client setup alternative: This is correct. SAP provisions the initial system landscape, including setting up a client (e.g., client 100) with the agreed setup (e.g., organizational structure), as part of the Prepare phase services.

* C. Implementing customizations to the SAP Best Practices business processes: This is incorrect.

Customizations (e.g., coding, extensions) beyond configuration are customer or partner responsibilities, not part of SAP's standard services.

* D. Activating required business functions in client 000: This is incorrect. Activating business functions in client 000 is a technical task for on-premise systems or conversions, not a standard service for a new cloud implementation, where Best Practices are deployed differently.

* E. Activating SAP Best Practices content in the system: This is correct. SAP standard services include activating Best Practices content (e.g., via SAP Solution Builder) to provide a preconfigured baseline for the Private Edition system.

In summary, tasks included in SAP's standard services are A(Configuring the SAP Best Practices business processes), B(Provisioning a client with the desired client setup alternative), and E(Activating SAP Best Practices content in the system).

NEW QUESTION # 30

What is identified in a customer's system through the SAP Readiness Check? Note: There are 2 correct answers to this question.

- A. Overview of financial data quality
- B. Recommended SAP Business Technology Platform services
- C. Recommended SAP Business Accelerator Hub prebuilt integration content
- D. Related simplification items and corresponding compatibility packages

Answer: A,D

NEW QUESTION # 31

Where do you identify new and changed features in the latest release of SAP S/4HANA? Note: There are 2 correct answers to this question.

- A. SAP Road Map Explorer
- B. Customer Influence portal
- C. Feature scope description
- D. What's New Viewer

Answer: A,D

Explanation:

Identifying new and changed features in the latest SAP S/4HANA release (e.g., 2024 for Private Edition) requires specific SAP tools or resources. Let's analyze:

* A. Feature scope description: This is incorrect. The feature scope description outlines the overall capabilities of a solution (e.g., Private Edition), but it's not a dynamic tool for highlighting new or changed features in a specific release-it's more static documentation.

* B. What's New Viewer: This is correct. The What's New Viewer (available via SAP Help Portal or SAP for Me) provides detailed release notes for each SAP S/4HANA version, listing new features, enhancements, and changes (e.g., new Fiori apps, process improvements) specific to the latest release.

* C. SAP Road Map Explorer: This is also correct. SAP Road Map Explorer (roadmaps.sap.com) offers a strategic view of SAP S/4HANA's evolution, including new and planned features across releases. It highlights innovations and updates, making it a key resource for tracking changes.

* D. Customer Influence portal: This is incorrect. The Customer Influence portal allows customers to submit and vote on improvement requests, but it's not a primary source for identifying new or changed features in a release-it's for feedback, not documentation.

In summary, new and changed features are identified in B(What's New Viewer) and C(SAP RoadMap Explorer).

* SAP Learning: "SAP S/4HANA Cloud Private Edition - Release Information" (learning.sap.com)

* SAP Help Portal: "What's New Viewer for SAP S/4HANA" (help.sap.com)

* SAP Official Site: "SAP Road Map Explorer" (roadmaps.sap.com)

NEW QUESTION # 32

Which of the following are formal tests, and therefore must be documented? Note: There are 2 correct answers to this question.

- A. Business process tests
- B. Integration tests
- C. Unit tests
- D. String tests

Answer: A,B

NEW QUESTION # 33

What can you use to migrate data to SAP S/4HANA Cloud Private Edition for a new implementation? Note:

There are 3 correct answers to this question.

- A. A direct connection to an SAP ERP system
- B. XML or CSV templates
- C. Core data services
- D. A separate SAP HANA database
- E. The zero-downtime service

Answer: A,B,D

Explanation:

When performing a new implementation of SAP S/4HANA Cloud Private Edition, data migration can be accomplished using the following methods:

Option A: A separate SAP HANA database

This option is correct. Utilizing a separate SAP HANA database as a staging area allows for the extraction, transformation, and loading (ETL) of data from legacy systems into SAP S/4HANA Cloud Private Edition.

This approach is particularly beneficial for handling large volumes of data and complex transformations.

SAP Learning

Option B: A direct connection to an SAP ERP system

This option is correct. Establishing a direct connection between the source SAP ERP system and the target SAP S/4HANA Cloud Private Edition system enables seamless data migration. This method leverages tools like the SAP S/4HANA Migration Cockpit, which facilitates data transfer through Remote Function Calls (RFC).

SAP Learning

Option C: Core data services

This option is incorrect. Core Data Services (CDS) are primarily used for data modeling and defining views within SAP systems. They are not designed for data migration purposes.

Option D: The zero-downtime service

This option is incorrect. The zero-downtime service is intended to minimize downtime during system upgrades or maintenance. It is not a tool or method for data migration.

Option E: XML or CSV templates

This option is correct. Using XML or CSV templates is a common method for data migration. Data from legacy systems can be exported into these templates and then imported into SAP S/4HANA Cloud Private Edition using tools like the SAP S/4HANA Migration Cockpit.

In summary, for a new implementation of SAP S/4HANA Cloud Private Edition, data migration can be effectively performed using a separate SAP HANA database, establishing a direct connection to an SAP ERP system, or utilizing XML or CSV templates. Each method offers distinct advantages depending on the specific requirements and constraints of the migration project.
