

可靠的1Z1-182題庫 & 完美的Oracle認證培訓 -最佳的Oracle Database 23ai Administration Associate

順便提一下，可以從雲存儲中下載VCESoft 1Z1-182考試題庫的完整版：<https://drive.google.com/open?id=1zT7AlyYx8Qli0PyiONPKX9XiCj6Hv77n>

VCESoft提供有保證的題庫資料，以提高您的Oracle 1Z1-182考試的通過率，您可以認識到我們產品的真正價值。如果您想參加1Z1-182考試，請選擇我們最新的1Z1-182題庫資料，該題庫資料具有針對性，不僅品質是最高的，而且內容是最全面的。對於那些沒有充分的時間準備考試的考生來說，Oracle 1Z1-182考古題就是您唯一的、也是最好的選擇，這是一個高效率的學習資料，1Z1-182可以讓您在短時間內為考試做好充分的準備。

Oracle 1Z1-182 考試大綱：

主題	簡介
主題 1	• Moving Data: This section evaluates the expertise of Data Migration Specialists in moving data within Oracle databases. It includes using external tables, executing Oracle Data Pump operations, and distinguishing SQL*Loader commands for importing data efficiently.
主題 2	• Displaying Creating and Managing PDBs: This section assesses the knowledge of Cloud Database Architects in creating pluggable databases (PDBs) from seeds or other techniques. It also covers modifying PDB modes and attributes to meet specific application requirements.
主題 3	• Describe Oracle Database Architecture: This section of the exam measures the skills of Database Administrators and System Architects in understanding the Oracle database architecture. It covers the configurations of Oracle database instances, memory structures like SGA and PGA, and process structures such as background processes. It also explains the logical and physical database structures, including datafiles, control files, and redo log files.
主題 4	• Managing Undo: This domain measures the skills of Database Administrators in using undo data effectively. It compares undo data with redo data and explains temporary undo usage for efficient transaction management.
主題 5	• Managing Users, Roles, and Privileges: This domain evaluates the expertise of Security Administrators in implementing user security measures. It focuses on creating and managing users, roles, and privileges to ensure secure access to Oracle databases.
主題 6	• Automated Maintenance: This section measures the skills of Database Administrators in describing automated maintenance tasks within Oracle databases. It focuses on applying automated features to streamline routine maintenance activities.
主題 7	• Introduction to Auditing: This domain tests the abilities of Compliance Specialists in implementing database auditing practices. It includes creating, modifying, and maintaining auditing policies while applying value-based auditing techniques like Fine-Grained Auditing (FGA).

主題 8	• Employ Oracle-Supplied Database Tools: This section evaluates the abilities of Database Engineers and Support Specialists in identifying and using Oracle-supplied tools for managing databases. It focuses on leveraging tools to monitor, troubleshoot, and optimize database performance effectively.
主題 9	• Managing Tablespaces and Datafiles: This section assesses the abilities of Storage Administrators in creating, modifying, and describing tablespaces. It also covers recognizing data storage requirements and understanding datafile placement for efficient storage management.
主題 10	• Introduction to Performance: This section evaluates the expertise of Performance Analysts in summarizing Oracle database performance management techniques. It includes measuring database performance using SQL execution plans, directives, and advisors to ensure optimal system efficiency.

1Z1-182題庫和認證考試材料中的領先提供商 & 1Z1-182考題免費下載

使用VCESoft公司推出的1Z1-182考試學習資料，您將發現與真實考試95%相似的考試問題和答案，以及我們升級版之后的Oracle 1Z1-182題庫，覆蓋率會更加全面。我們的專家為你即將到來的考試提供學習資源，不僅僅在於學習，更在於如何通過1Z1-182考試。如果你想在IT行業擁有更好的發展，擁有高端的技術水準，Oracle 1Z1-182是確保你獲得夢想工作的唯一選擇，為了實現這一夢想，趕快行動吧！

最新的 Oracle Database 23ai 1Z1-182 免費考試真題 (Q22-Q27):

問題 #22

Which statement is true about database links?

- **A. A database link created in a database allows a connection from that database's instance to the target database's instance for selecting schema data.**
- B. A database link can be created only between two Oracle databases.
- C. A public database link can be used by any user allowing remote database instance connection for selecting schema data.
- D. A public database link can be created only by SYS.
- E. Private database link creation requires the same user to exist in both the local and the remote databases.

答案：A

解題說明：

- A .False. Links can connect to non-Oracle DBs via gateways.
- B .False. No such user requirement; authentication is separate.
- C .False. Any user with CREATE PUBLIC DATABASE LINK can create one.
- D .True. Links enable remote schema access (e.g., SELECT * FROM emp@remote).
- E .False. Public links allow access, but privileges on remote objects are needed.

問題 #23

Examine these commands:

```
[oracle@host01 ~]$ sqlplus u1/oracle
```

```
SQL> SELECT * FROM emp;
```

```
ENO ENAME DN
```

```
-----
```

```
1 Alan 2
```

```
2 Ben 2
```

```
SQL> exit
```

```
[oracle@host01 ~]$ cat emp.dat
```

```
1, Alan, 2
```

```
3, Curl, 4
```

```
4, Bob, 4
```

```
[oracle@host01 ~]$ sqlldr u1/oracle TABLE=emp
```

Which two statements are true?

- A. It generates a log that contains control file entries, which can be used with normal SQL*Loader operations.
- B. It appends data from EMP.DAT to EMP.
- C. It overwrites the data for Alan and adds data for Curl and Bob.
- D. It overwrites all data in EMP with data from EMP.DAT.
- E. It generates a SQL script that it uses to load data from EMP.DAT to EMP.

答案: A,B

解題說明:

SQL*Loader (sqlldr) loads data from external files into Oracle tables. The command sqlldr u1/oracle TABLE=emp uses defaults since no control file is specified. Let's evaluate:

A . It overwrites the data for Alan and adds data for Curl and Bob.

False. SQLLoader's default mode is APPEND, not REPLACE. It doesn't "overwrite" existing rows unless REPLACE or TRUNCATE is specified in a control file. Here, row 1, Alan, 2 exists, and SQLLoader will either skip it (if a primary key rejects duplicates) or raise an error, but it won't overwrite. 3, Curl, 4 and 4, Bob, 4 are appended.

Mechanics:Without a control file, SQL*Loader assumes APPEND and matches columns positionally (ENO, ENAME, DN).

B . It generates a log that contains control file entries, which can be used with normal SQL*Loader operations.

True. SQL*Loader always generates a log file (e.g., emp.log) when invoked. With no control file specified, it auto-generates one internally and logs it, including entries like LOAD DATA INFILE 'emp.dat' APPEND INTO TABLE emp FIELDS TERMINATED BY ',' (ENO, ENAME, DN). This can be reused.

Practical Use:The log's control section is editable for future runs (e.g., changing to REPLACE).

C . It appends data from EMP.DAT to EMP.

True. Default behavior without a control file is APPEND, adding new rows (3, Curl, 4 and 4, Bob, 4) to EMP. Existing rows (1, Alan, 2, 2, Ben, 2) remain unless constrained (e.g., unique key violations).

Mechanics:SQL*Loader processes each line of emp.dat, skipping duplicates if constrained, appending otherwise.

D . It generates a SQL script that it uses to load data from EMP.DAT to EMP.

False. SQL*Loader doesn't generate SQL scripts; it uses direct path or conventional path loading, not SQL scripts. The log contains control file syntax, not a script.

E . It overwrites all data in EMP with data from EMP.DAT.

False. REPLACE or TRUNCATE would overwrite, but these require a control file with those options. Default APPEND preserves existing data.

問題 #24

Which two Oracle database space management features require the use of locally managed tablespaces?

- A. Online segment shrink.
- B. Oracle Managed Files (OMF).
- C. Server-generated tablespace space alerts.
- D. Free space management with bitmaps.
- E. Automatic data file extension (AUTOEXTEND).

答案: A,D

解題說明:

A .False. Works with DMTs too.

B .True. LMTs use bitmaps, unlike DMT freelists.

C .False. OMF is independent of management type.

D .False. Alerts work with both.

E .True. Shrink requires LMTs with ASSM.

問題 #25

In which two ways would you disable timing information collected for wait events and much of the performance monitoring capability of the database?

- A. By executing the PL/SQL procedure DBMS_TIME_STATISTIC.DISABLE(TRUE).
- B. By setting the TIMED_STATISTICS_LEVEL system parameter to FALSE.
- C. By executing the PL/SQL procedure DBMS_TIME_STATISTIC.LEVEL(BASIC).

- D. By setting the STATISTICS_LEVEL parameter to BASIC.
- E. By setting the TIMED_STATISTICS system parameter to FALSE.

答案：D,E

解題說明：

- A .True. TIMED_STATISTICS = FALSE disables timing data collection.
- B .False. No such procedure exists.
- C .False. No TIMED_STATISTICS_LEVEL parameter exists.
- D .True. STATISTICS_LEVEL = BASIC disables most performance monitoring.
- E .False. No such procedure exists.

問題 #26

What are the three components of Oracle Database Automatic Maintenance Tasks?

- A. A set of tasks that are started automatically at regular intervals to perform maintenance operations on the database.
- B. A database alert log that stores details about major database operations and errors, which is used to manage cluster performance.
- C. A packaging system that allows you to combine all error and failure logs to share with Oracle Support.
- D. A diagnostic system that collects database error logs and details about database failures that can be found to diagnose complete file.
- E. Oracle Database Resource Manager, which enables you to manage and configure system resources used by the Automatic Maintenance Tasks.
- F. The maintenance windows managed by Oracle Database Scheduler, which are predefined time intervals permitting scheduled tasks.

答案：A,E,F

解題說明：

- A .False. Diagnostic collection is ADR, not AMT.
- B .True. Resource Manager allocates resources to AMTs.
- C .True. Scheduler defines maintenance windows.
- D .False. Packaging is IPS/ADR, not AMT.
- E .False. Alert log is separate from AMTs.
- F .True. Tasks like stats collection are AMTs.

問題 #27
