

# New AIP-210 Exam Cram & New AIP-210 Test Test

What's more, part of that Itcerttest AIP-210 dumps now are free: <https://drive.google.com/open?id=1gUZdaCTRyxmx07i-QFhQTKOfGvvq5QLI>

There is no doubt that having a AIP-210 certificate is of great importance to our daily life and daily work, it can improve your comprehensive strength when you are seeking for a decent job or competing for an important position, mainly because with AIP-210 Certification, you can totally highlight your resume and become more confident in front of your interviewers and competitors. In this case, our AIP-210 question torrent can play a very important part in helping you achieve your dream.

## CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Recognize relative impact of data quality and size to algorithms</li><li>• Engineering Features for Machine Learning</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Design machine and deep learning models</li><li>• Explain data collection</li><li>• transformation process in ML workflow</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Address business risks, ethical concerns, and related concepts in training and tuning</li><li>• Work with textual, numerical, audio, or video data formats</li></ul>

## 100% Pass CertNexus - Useful New AIP-210 Exam Cram

Itcerttest.com won a good reputation by these candidates that have passed CertNexus AIP-210 certification exam. Itcerttest gets approve from the people with its powerful exam dumps. As long as you choose our dumps as review tool before the exam, you will have a happy result in AIP-210 Exam, which is perfectly obvious. Now hurry to download free demo, you will believe your choice can't be wrong.

## CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q83-Q88):

### NEW QUESTION # 83

You have a dataset with many features that you are using to classify a dependent variable. Because the sample size is small, you are worried about overfitting. Which algorithm is ideal to prevent overfitting?

- A. Logistic regression
- **B. Random forest**
- C. Decision tree
- D. XGBoost

**Answer: B**

#### NEW QUESTION # 84

You train a neural network model with two layers, each layer having four nodes, and realize that the model is underfit. Which of the actions below will NOT work to fix this underfitting?

- A. Increase the complexity of the model
- B. Train the model for more epochs
- **C. Get more training data**
- D. Add features to training data

**Answer: C**

Explanation:

Underfitting is a problem that occurs when a model learns too little from the training data and fails to capture the underlying complexity or structure of the data. Underfitting can result from using insufficient or irrelevant features, a low complexity of the model, or a lack of training data. Underfitting can reduce the accuracy and generalization of the model, as it may produce oversimplified or inaccurate predictions. Some of the ways to fix underfitting are:

\* Add features to training data: Adding more features or variables to the training data can help increase the information and diversity of the data, which can help the model learn more complex patterns and relationships.

\* Increase the complexity of the model: Increasing the complexity of the model can help increase its expressive power and flexibility, which can help it fit better to the data. For example, adding more layers or nodes to a neural network can increase its complexity.

\* Train the model for more epochs: Training the model for more epochs can help increase its learning ability and convergence, which can help it optimize its parameters and reduce its error.

Getting more training data will not work to fix underfitting, as it will not change the complexity or structure of the data or the model.

Getting more training data may help with overfitting, which is when a model learns too much from the training data and fails to generalize well to new or unseen data.

#### NEW QUESTION # 85

In addition to understanding model performance, what does continuous monitoring of bias and variance help ML engineers to do?

- A. Respond to hidden attacks
- B. Recover from hidden attacks
- **C. Prevent hidden attacks**
- D. Detect hidden attacks

**Answer: C**

Explanation:

Explanation

Hidden attacks are malicious activities that aim to compromise or manipulate an ML system without being detected or noticed.

Hidden attacks can target different stages of an ML workflow, such as data collection, model training, model deployment, or model monitoring. Some examples of hidden attacks are data poisoning, backdoor attacks, model stealing, or adversarial examples.

Continuous monitoring of bias and variance can help ML engineers to prevent hidden attacks, as it can help them detect any anomalies or deviations in the data or the model's performance that may indicate a potential attack.

#### NEW QUESTION # 86

In general, models that perform their tasks:

- **A. More accurately are less robust against adversarial attacks.**
- B. More accurately are neither more nor less robust against adversarial attacks.
- C. Less accurately are neither more nor less robust against adversarial attacks.
- D. Less accurately are less robust against adversarial attacks.

**Answer: A**

Explanation:

Explanation

Adversarial attacks are malicious attempts to fool or manipulate machine learning models by adding small perturbations to the input data that are imperceptible to humans but can cause significant changes in the model output. In general, models that perform their tasks more accurately are less robust against adversarial attacks, because they tend to have higher confidence in their predictions and are more sensitive to small changes in the input data. ### NEW QUESTION # 87

A classifier has been implemented to predict whether or not someone has a specific type of disease.

Considering that only 1% of the population in the dataset has this disease, which measures will work the BEST to evaluate this model?

- A. Recall and explained variance
- B. Precision and accuracy
- C. Precision and recall
- D. Mean squared error

**Answer: C**

### NEW QUESTION # 88
