The exam simulation will mark your mistakes and help you play well in CRT-450 practice test.

Salesforce Certified Platform Developer I Sample Questions (Q104-Q109):

NEW QUESTION # 104

A developer must troubleshoot to pinpoint the causes of performance issues when a custom page loads in their org. Which tool should the developer use to troubleshoot query performance?

- A. Developer Console
- B. AppExchange
- C. Visual Studio Code IDE
- D. Setup Menu

Answer: A

NEW QUESTION # 105

A developer has a single custom controller class that works with a Visualforce Wizard to support creating and editing multiple

sObjects. The wizard accepts data from user inputs across multiple Visualforce pages and from a parameter on the initial URL. Which three statements are useful inside the unit test to effectively test the custom controller?

Choose 3 answers

- A. String nextPage = controller.save().getUrl();
- B. public Extendedcontroller (ApexPages.Standardcontroller entr) { }
- C. ApexPages.currentPage ().getParameters().put('input', 'TeatValue');
- D. insert pageret;
- E. Test. setCurrentPage (pageRef) ;

Answer: A,B,C

Explanation:

A: The save() method in the custom controller must be tested to ensure it works as intended and redirects to the correct page.

B: Setting parameters via ApexPages.currentPage().getParameters() is crucial to test scenarios where user input or URL parameters drive logic.

D: Using Test.setCurrentPage(pageRef) is essential for simulating page context in unit tests.

Why not other options?

C: This statement does not belong to testing a custom controller.

B (second occurrence): It appears to be incorrectly formatted in the question.

Testing Apex Controllers

NEW QUESTION # 106

What are two ways a developer can get the status of an enquired job for a class that queueable interface? Choose 2 answers

- A. View the apex Jobs page
- B. View the apex status Page
- C. View the apex flex Queue
- D. Query the AsyncApexJob object

Answer: A,B

NEW QUESTION # 107

What should a developer use to obtain the Id and Name of all the Leads, Accounts, and Contacts that have the company name "Universal Containers"?

- A. SELECT Lead.id, Lead.Name, Account.Id, AccountName, Contacted, Contact.Name FROM Lead, Account, Contact WHERE CompanyName = 'Universal Containers'
- B. SELECT lead(id, name), account(id, name), contacted, name) FROM Lead, Account, Contact WHERE Name = "universal Containers"
- C. FIND Universal Containers' IN CompanyName Fields RETURNING lead(id, name), account(id, name), contacted, name)
- D. FIND 'Universal Containers' IN Name Fields RETURNING lead(id, name), account(id, name), contacted, name)

Answer: D

Explanation:

A developer should use the FIND clause with the IN Name Fields option to obtain the Id and Name of all the Leads, Accounts, and Contacts that have the company name "Universal Containers". The FIND clause allows you to perform text searches in Salesforce data, similar to searching with a search engine1. The IN Name Fields option specifies that the search should look for matches in the Name fields of the objects2. The RETURNING clause specifies which objects and fields to return in the search results3. The syntax of the FIND clause is as follows:

FIND {searchString} [IN searchGroup] [RETURNING fieldSpec [ORDER BY orderBySpec] [LIMIT limitSpec] [OFFSET offsetSpec]] For example, the following query returns the Id and Name of all the Leads, Accounts, and Contacts that have the company name "Universal Containers":

FIND 'Universal Containers' IN Name Fields RETURNING lead(id, name), account(id, name), contact(id, name) Option B is incorrect, because there is no such option as IN CompanyName Fields in the FIND clause. The valid options for the IN clause are ALL FIELDS, NAME FIELDS, EMAIL FIELDS, PHONE FIELDS, and SIDEBAR FIELDS2.

Option C is incorrect, because it is not a valid SOQL query. SOQL stands for Salesforce Object Query Language, which is a

different way of querying Salesforce data than the FIND clause. SOQL queries use the SELECT statement to specify the fields and objects to retrieve, and the WHERE clause to filter the records based on certain criteria. However, SOQL queries cannot query multiple objects in a single statement, unless they are related by a relationship. Therefore, the query in option C would result in a syntax error, as it tries to query Lead, Account, and Contact objects in the same statement, without specifying any relationship. Option D is incorrect, because it is also not a valid SOQL query. Apart from the same issue as option C, it also has a typo in the WHERE clause, as it uses an asterisk (*) instead of an equal sign (=) to compare the CompanyName field with the value "Universal Containers".

NEW QUESTION # 108

The Salesforce Administrator created a custom picklist field, Account_status_c, on the Account object. This picklist has possible values of "Inactive" and "Active".

As part of a new business process, management wants to ensure an opportunity record is created only for Accounts marked as "Active". A developer is asked to implement this business requirement.

Which two automation tools should be used to fulfill the business need?

Choose 2 answers

- A. Workflow Rules
- B. **Process Builder**
- C. Approval Process
- D. **Salesforce Flow**

Answer: B,D

NEW QUESTION # 109

.....
