

Valid Fire-Inspector-II Test Papers, Exam Questions Fire-Inspector-II Vce

Fire Inspector Practice Exam Questions and Answers Already Graded A

Which of the following is NOT considered to be a model code organization?

- A. National Fire Protection Association
- B. National Fire Academy
- C. International Code Council
- D. American Society of Mechanical Engineers ✓✓B. National Fire Academy

A prescriptive code does which of the following?

- A. List the specific details the installation or construction must meet
- B. Requires equipment to be installed for protection against a hazard
- C. Is interested locally
- D. Is a national standard ✓✓A. List the specific details the installation or construction must meet

What type of tanker typically transport 6,000 to 10,000 gallons of flammable and combustible materials?

Exam Questions Fire-Inspector-II Vce & Fire-Inspector-II Exam Assessment

In the information era, IT industry is catching more and more attention. In the society which has a galaxy of talents, there is still lack

of IT talents. Many companies need IT talents, and generally, they investigate IT talents's ability in according to what IT related authentication certificate they have. So having some IT related authentication certificate is welcomed by many companies. But these authentication certificate are not very easy to get. International Code Council Fire-Inspector-II is a quite difficult certification exams. Although a lot of people participate in International Code Council Fire-Inspector-II exam, the pass rate is not very high.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58

Clearance between tops of piles of combustible fibers and sprinkler heads shall not be less than ____ ft.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Reference to Fire Code Requirements for Clearance Between Combustible Fibers and Sprinklers:

The International Fire Code (IFC 2021), Section 3206.6, states that the minimum clearance between the tops of piles of combustible fibers and sprinkler deflectors shall be no less than 3 feet.

This requirement ensures that the sprinkler system operates efficiently and that water distribution is not obstructed in case of a fire.

Fire Safety Concerns:

Combustible fibers pose a high fire risk due to their flammability and tendency to generate large amounts of heat and smoke.

Adequate clearance prevents heat accumulation near the sprinkler heads, ensuring they activate at the correct temperature.

Clarification of Incorrect Answer Choices:

A: 2 ft. # Incorrect

Too low and could obstruct sprinkler operation, reducing water distribution effectiveness.

C: 4 ft. # Incorrect

Exceeds the required minimum per the IFC 3206.6 standard, though more clearance is beneficial.

D: 5 ft. # Incorrect

More than the code requirement, but the mandatory clearance is 3 feet.

Conclusion:

The correct and verified answer is B (3 feet) based on IFC 3206.6, ensuring proper sprinkler performance and fire safety for combustible fiber storage.

NEW QUESTION # 59

Compressed natural gas (CNG) motor vehicle fuel-dispensing equipment may be installed in which of the following locations?

- A. 40 ft. from trolley wires.
- **B. 20 ft. from a railroad track.**
- C. 5 ft. from an undeveloped property line.
- D. 15 ft. from a public street.

Answer: B

Explanation:

Compressed Natural Gas (CNG) motor vehicle fuel-dispensing equipment installation requirements are outlined in 2021 International Fire Code (IFC) Section 2208 - Compressed Natural Gas Motor Fuel- Dispensing Facilities.

IFC 2021, Section 2208.3 - Equipment Location and Protection:

Requires that CNG dispensing equipment be installed at least:

10 feet from property lines

20 feet from public streets, highways, sidewalks, or railroads

10 feet from buildings or structures

Why Other Options Are Incorrect?

A). 40 ft. from trolley wires.

The IFC does not specify a 40-ft requirement for trolley wires in relation to CNG fuel-dispensing equipment.

B). 15 ft. from a public street.

Incorrect because IFC 2208.3 states that the minimum required distance from a public street is 20 feet, not 15 feet.

D). 5 ft. from an undeveloped property line.

Incorrect, as the minimum clearance from any property line is 10 feet, not 5 feet.

Correct answer: C. 20 ft. from a railroad track.

NEW QUESTION # 60

An acceptance test for a fire alarm system in a new apartment building should be scheduled after:

- A. the hydrostatic test of the underground main is completed.
- B. the system has been installed and operating for one year.
- C. the contractor verifies full compliance.
- D. each zone is completed.

Answer: C

Explanation:

IFC Section 901.5 (Acceptance Tests) requires fire protection systems, including fire alarms, to be tested upon completion to ensure compliance with NFPA 72 (National Fire Alarm and Signaling Code) and the IFC. The contractor's verification of full compliance (B) signals readiness for the official acceptance test by the fire code official, ensuring all components are installed and functional. Option A (zone-by-zone testing) is impractical for final acceptance. Option C ties the test to water supply, irrelevant to alarms. Option D (one year) is excessive and not required by IFC or NFPA 72 for initial acceptance. Thus, B is correct.

Reference: IFC 2021, Section 901.5 (Acceptance Tests), NFPA 72.

NEW QUESTION # 61

Given: In automobile refinishing spray booths where drying by heat is done in the spray booth, the spray booth shall be equipped with interlocks between the spraying and drying apparatus and the ventilating system.

These interlocks shall be arranged to purge the spray vapors from the spray booth for a minimum period of ___ minutes before the drying apparatus can be operated.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

In automobile refinishing spray booths where drying by heat occurs inside the same spray booth, fire codes require interlocks to prevent ignition hazards.

Before activating the drying apparatus, the ventilation system must purge the booth of spray vapors for at least 5 minutes to remove flammable concentrations.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 2404.7.3 (Drying Operations in Spray Booths) IFC 2404.7.3 mandates that spray booths must have interlocks to purge vapors for a minimum of 5 minutes before activating the drying process.

This ensures that flammable vapors are removed before heat sources operate, reducing fire risks.

2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) - Section 15.4.6 NFPA 33, Section 15.4.6 confirms the requirement for a 5-minute ventilation purge cycle before heat drying.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 2 minutes is insufficient for adequate vapor removal.

Option B (Incorrect): 3 minutes does not meet the minimum safety requirement.

Option C (Incorrect): 4 minutes is slightly below the code-mandated requirement.

Option D (Correct): 5 minutes is the minimum required purge time per IFC 2404.7.3 and NFPA 33.

Thus, the correct and verified answer is: D. 5.

NEW QUESTION # 62

The maximum travel distance permitted in a one-story, Group F-2 building equipped with automatic sprinklers and automatic smoke and heat roof vents is ___ ft.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The maximum travel distance allowed in a one-story Group F-2 (Factory Industrial - Low Hazard) occupancy with automatic sprinklers and automatic smoke and heat vents is regulated by 2021 International Fire Code (IFC) Table 1017.2 - Exit Access Travel Distance.

IFC Table 1017.2 - Maximum Travel Distance:

For a Group F-2 occupancy equipped with an automatic sprinkler system, the maximum allowable exit access travel distance is 400 feet.

However, when automatic smoke and heat vents are installed, the travel distance is limited to 350 feet.

This is because while the sprinklers control fire spread, smoke and heat vents help with smoke control, allowing for extended egress distances but not as much as without them.

Why Other Options Are Incorrect?

A: 250 ft. - Too restrictive; the IFC allows a longer travel distance in this scenario.

B: 300 ft. - Less than the allowed 350 ft.

D: 400 ft. - Only applicable without smoke and heat vents.

NEW QUESTION # 63

.....

No matter on any condition, our company will not use your information to make profits. As already mentioned above, our Fire-Inspector-II learning materials attach great importance to the interests of customers. A product can develop for so many years, and ultimately the customer's trust and support. Many of the users of Fire-Inspector-II training prep were introduced by our previous customers. They truly trust our Fire-Inspector-II exam questions. And as long as you buy our Fire-Inspector-II practice guide, we believe you will trust them as well.
