Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q95-Q100):

NEW QUESTION # 95
Why is it important to spend time "in the zone"?

- A. To reduce queue lengths
- B. To maximize ideal productivity time
- C. To make work in process visible
- D. To refine productive collaboration

Answer: B

Explanation:

Spending time "in the zone" means being fully immersed in a task that is challenging, engaging, and enjoyable. This state of flow is associated with higher levels of creativity, innovation, and performance1. According to SAFe, optimizing the time spent in the zone for individuals and teams makes a substantial difference in ART productivity2. The other options are not directly related to the concept of flow, although they may be influenced by it. Reducing queue lengths, refining productive collaboration, and making work in process visible are all aspects of visualizing and limiting WIP, which is another flow accelerator3.

NEW QUESTION # 96
In the context of BDD, behavior is often first described in general terms, which can be ambiguous, that is why specific examples that can directly become tests should be used.

- A. FALSE
- B. TRUE

Answer: B

NEW QUESTION # 97
Who decides the Team PI Objective Business Value scoring after negotiation?

- A. Product Management
- B. Business Owner
- C. The Agile Team
- D. The RTE

Answer: B

Explanation:
Business Owners are key ART stakeholders who have the primary business and technical responsibility for return on investment (ROI), governance, and compliance. They evaluate the fitness for use and actively participate in ART events and solution development. They also use a scale of 1 (lowest) to 10 (highest) to assign the business value to the team PI objectives after negotiation with the teams and other stakeholders.
They typically assign the highest values to the customer-facing objectives. References: Business Owners - Scaled Agile Framework, PI Objectives - Scaled Agile Framework

NEW QUESTION # 98
During the Inspect and Adapt event, how are reflection, data collection, problem solving, and identification of improvement actions used?

- A. To enhance and improve the Innovation and Planning practices
- B. To evaluate better implementation steps
- C. To help the team bond and work more efficiently together
- D. To increase the quality and reliability of the next PI

Answer: D

Explanation:
According to the SAFe for Teams SP (6.0) - SAFe Practitioner handbook and study guide, the Inspect and Adapt event is a significant event held at the end of each PI, where the current state of the solution is demonstrated and evaluated. Teams then reflect and identify improvement backlog items via a structured problem-solving workshop. The purpose of the Inspect and Adapt event is to increase the quality and reliability of the next PI by applying the following practices:
* Reflection: Teams review the PI objectives, the system demo, and the quantitative and qualitative measurements to assess the current state of the solution and the ART performance. Teams also share their learnings, successes, and challenges with each other and the stakeholders.
* Data collection: Teams collect data from various sources, such as team and program metrics, customer feedback, surveys, and assessments, to measure the outcomes and the health of the solution and the ART. Teams also use tools such as the PI burndown chart, the cumulative flow diagram, and the team self-assessment to visualize the data and identify trends and patterns.
* Problem solving: Teams use a structured problem-solving workshop to identify the most critical issues or impediments that are affecting the solution or the ART. Teams use techniques such as brainstorming

NEW QUESTION # 99
On day two of PI Planning, management presents adjustments based on the previous day's management review and problem-solving meeting. What is one possible type of adjustment they could make?

- A. Adjust business priorities
- B. Change a team's plan
- C. Create new User Stories
- D. Redefine the length of the PI

Answer: A

Explanation:
On day two of PI Planning, management presents adjustments based on the previous day's management review and problem-solving meeting. The management review and problem-solving meeting is a session where the management team reviews the draft plans and objectives from the teams, identifies risks and dependencies, and resolves any issues that may affect the ART's ability to deliver value. One possible type of adjustment they could make is to adjust the business priorities based on the new information and feedback from the teams. This could involve reprioritizing the features in the program backlog, changing the weight or value of some objectives, or adding or removing some stretch objectives. These adjustments are communicated to the teams during the second planning day, so they can finalize their plans and objectives accordingly.
