## CAP Valid Study Guide & CAP Exam Training Material & CAP Free Download Demo

Without practice, you cannot crack the CAP exam. PassSureExam facilitates you in this purpose with its desktop The SecOps Group CAP practice exam software. It helps you get practical experience with the final CAP Exam. By practicing under real Certified AppSec Practitioner Exam (CAP) exam situations again and again, you develop confidence and skills to attempt the CAP exam within its allocated time.

## The SecOps Group Certified AppSec Practitioner Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48

An application's forget password functionality is described below:  
The user enters their email address and receives a message on the web page:  
"If the email exists, we will email you a link to reset the password"

The user also receives an email saying:  
"Please use the link below to create a new password:"

(Note that the developer has included a one-time random token with the 'userId' parameter in the link). So, the link seems like:  
[https://example.com/reset\\_password?userId=5298&token=70e7803e-bf53-45e1-8a3f-fb15da7de3a0](https://example.com/reset_password?userId=5298&token=70e7803e-bf53-45e1-8a3f-fb15da7de3a0) Will this mechanism prevent an attacker from resetting arbitrary users' passwords?

- A. False
- **B. True**

**Answer: B**

Explanation:

The password reset mechanism now includes a one-time random token alongside the userId in the reset link:  
[https://example.com/reset\\_password?userId=5298&token=70e7803e-bf53-45e1-8a3f-fb15da7de3a0](https://example.com/reset_password?userId=5298&token=70e7803e-bf53-45e1-8a3f-fb15da7de3a0). Let's evaluate the effectiveness of this mechanism:

\* Analysis: The inclusion of a one-time random token (e.g., 70e7803e-bf53-45e1-8a3f-fb15da7de3a0) is a best practice for secure password reset mechanisms. This token should be unique, unpredictable, and tied to the specific user's reset request (e.g., stored in the database with an expiration time). When the user clicks the link, the application should verify that the token matches the one associated with the userId and that it hasn't been used or expired.

\* Preventing Arbitrary Resets: Without the token, an attacker could manipulate the userId (e.g., to 5299) to reset another user's password (as seen in Question 45). However, with the token, the attacker would need to guess the correct token for the targeted userId, which is computationally infeasible if the token is sufficiently random (e.g., a UUID or cryptographically secure random string) and properly validated. This prevents unauthorized password resets.

\* Additional Considerations: The link uses https://, ensuring a secure channel (unlike Question 45). The message "If the email exists..." prevents username enumeration, as discussed previously.

\* Option A ("True"): Correct, as the one-time random token, if implemented correctly (e.g., validated server-side, single-use, time-limited), prevents an attacker from resetting arbitrary users' passwords.

\* Option B ("False"): Incorrect, as the mechanism is secure with the token.

The correct answer is A, aligning with the CAP syllabus under "Secure Password Reset" and "Token-Based Authentication." References: SecOps Group CAP Documents - "Password Reset Security," "Token Generation Best Practices," and "OWASP Forgot Password Cheat Sheet" sections.

#### NEW QUESTION # 49

You are the project manager for the NHH project. You are working with your project team to examine the project from four different defined perspectives to increase the breadth of identified risks by including internally generated risks. What risk identification approach are you using in this example?

- A. Influence diagramming techniques
- B. Root cause analysis
- C. Assumptions analysis
- **D. SWOT analysis**

**Answer: D**

#### NEW QUESTION # 50

Joan is a project management consultant and she has been hired by a firm to help them identify risk events within the project. Joan would first like to examine the project documents including the plans, assumptions lists, project files, and contracts. What key thing will help Joan to discover risks within the review of the project documents?

- A. The project documents will help the project manager, or Joan, to identify what risk identification approach is best to pursue.
- **B. Lack of consistency between the plans and the project requirements and assumptions can be the indicators of risk in the project.**
- C. Plans that have loose definitions of terms and disconnected approaches will reveal risks.
- D. Poorly written requirements will reveal inconsistencies in the project plans and documents.

**Answer: B**

### NEW QUESTION # 51

You and your project team have identified the project risks and now are analyzing the probability and impact of the risks. What type of analysis of the risks provides a quick and high-level review of each identified risk event?

- **A. Qualitative risk analysis**
- B. Seven risk responses
- C. Quantitative risk analysis
- D. A risk probability-impact matrix

**Answer: A**

### NEW QUESTION # 52

Which of the following describes residual risk as the risk remaining after risk mitigation has occurred?

- A. SSAA
- **B. DIACAP**
- C. DAA
- D. ISSO

**Answer: B**

### NEW QUESTION # 53

.....

The CAP certification verifies that you are a skilled professional. PassSureExam product is designed by keeping all the rules and regulations in focus that The SecOps Group publishes. Our main goal is that you can memorize the actual The SecOps Group CAP exam question to complete the Certified AppSec Practitioner Exam (CAP) test in time with extraordinary grades. The SecOps Group CAP Exam Dumps includes The SecOps Group CAP dumps PDF format, desktop CAP practice exam software, and web-based CAP practice test software.
