Salesforce PDII certification is regarded as one of the most prestigious certifications for developers in the Salesforce ecosystem. Platform Developer II certification demonstrates the developer's expertise in developing scalable, secure, and maintainable applications on the Salesforce platform. Platform Developer II certification also validates the developer's ability to work with a variety of Salesforce technologies, including Apex, Visualforce, Lightning Components, and more.

Salesforce PDII certification program is ideal for developers who have at least two years of experience in Salesforce development and have already passed the Salesforce Certified Platform Developer I (PD1) exam. The PDII Certification Exam tests a candidate's knowledge and expertise in areas such as Apex programming, Visualforce development, and Salesforce Lightning development. PDII exam is also designed to evaluate a candidate's proficiency in designing and implementing complex Salesforce solutions using advanced programming techniques.

### Salesforce Platform Developer II Sample Questions (Q75-Q80):

#### NEW QUESTION # 75

Exhibit:

□ The test method above tests an Apex trigger that the developer knows will make a lot of queries when a lot of Account are simultaneously updated to be customer.

The test method fails at the Line 20 because of too many SOQL queries

What is the correct way to fix this?

□ The test method above tests an Apex trigger that the developer knows will make a lot of queries when a lot of Accounts are simultaneously updated to be customers.

The test method fails at the Line 20 because of too many SOQL queries.

What is the correct way to fix this?

- A. Add Test.startTest() before and Test.stopTest() after both Line 7 of the code and Line 20 of the code.
- B. Add Test.startTest() before Line 18 of the code and add Test.stopTest() after line 18 of the code.
- C. Change the DataFactory class to create fewer Accounts so that the number of queries in the trigger is reduced.
- D. Replace most of the Apex Trigger with Process Builder processes to reduce the number of queries in the trigger.

**Answer: A**

#### NEW QUESTION # 76

Universal Containers needs to integrate with a Heroku service that resizes product images submitted by users.

What are two alternatives to implement the integration and protect against malicious calls to the Heroku app's endpoint? Choose 2 answers

- A. Create a Workflow Rule with an Outbound Message allowing the Heroku app to automatically store the resized images in Salesforce
- B. Create a trigger that uses an future Apex HTTP callout passing JSON serialized data; therefore the Heroku app can automatically reply back to the callout with the resized images in Salesforce.
- C. Create a trigger that uses an future Apex HTTP callout passing JSON serialized data and some form of pre-shared secret key, so that the Heroku app can authenticate requests and store the resized images in Salesforce.
- D. Create a Workflow Rule with an Outbound Message and select Send Session ID so that the Heroku app can use it to send the re images back to Salesforce.

**Answer: C,D**

#### NEW QUESTION # 77

The Account edit button must be overridden in an org where a subset of users still use Salesforce Classic. The org already has a Lightning Component that will do the work necessary for the override, and the client wants to be able to reuse it, How should a developer implement this?

- A. the edit button for both Lightning and Classic with a new Visualforce page.
- B. Override the edit button for Lightning with a Lightning Page; and for Classic, override the edit button with a Visualforce page That contains the Lightning Component.
- C. Override the edit button for Lightning with a Lightning Component; and for Classic, override the edit button with a Visualforce page that contains the Lightning Component.
- D. Override the edit button for both Lightning and Classic with a Lightning Component.

**Answer: C**

#### NEW QUESTION # 78

A Salesforce developer is hired by a multi-national company to build a custom Lightning application that shows employees their employment benefits and earned commissions over time. The application must acknowledge and respect the user's locale context for dates, times, numbers, currency, and currency symbols.

When using Aura components, which approach should the developer implement to ensure the Lightning application complies with the user's locale?

- A. Use the \$User global variable to retrieve the user preferences.
- B. Create a Hierarchical custom setting to store user preferences.
- C. Use the \$Locale value provider to retrieve the user preferences.
- D. Use the \$Label global value provider.

**Answer: C**

Explanation:

The \$Locale value provider is a global value provider that returns information about the current user's locale, such as the date format, time format, number format, currency format, and currency symbol. You can use the \$Locale value provider to format the data in your Aura components according to the user's locale preferences. The \$User global variable returns information about the current user, such as the name, email, profile, and role, but not the locale preferences. The \$Label global value provider returns custom labels that are defined in your Salesforce organization. Custom labels are used to create multilingual applications that can be translated into different languages. A hierarchical custom setting is a type of custom setting that lets you set different values for different profiles or users. You can use a hierarchical custom setting to store user preferences, but you would need to write code to retrieve and apply them to your Aura components. Reference: [\$Locale Value Provider], [\$User Global Variable], [\$Label Global Value Provider], [Custom Settings]

#### NEW QUESTION # 79

A developer needs to create a Lightning page for entering Order Information. An error message should be displayed if the zip code entered as part of the Order's shipping address is not numeric. What is a recommended way for the error message be displayed to the end user?

- A. Use the < ui : outputText> tag to display errors.
- B. Use the < apex:Message> tag to display errors.
- C. Use the < aura:component> tag to display errors.
- D. Use the < ui:inputDefaultError> tag to display errors.

**Answer: D**
