Exam XK0-006 Learning - XK0-006 Valid Exam Bootcamp

The world is changing, so we should keep up with the changing world's step as much as possible. Our It-Tests has been focusing on the changes of XK0-006 exam and studying in the exam, and now what we offer you is the most precious XK0-006 test materials. After you purchase our dump, we will inform you the XK0-006 update messages at the first time; this service is free, because when you purchase our study materials, you have bought all your XK0-006 exam related assistance.

CompTIA Linux+ Certification Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

A systems administrator manages multiple Linux servers and needs to set up a reliable and secure way to handle the complexity of managing event records on the OS and application levels.

Which of the following should the administrator do?

- A. Implement a centralized log aggregation solution.
- B. Create an automated process to retrieve logs from the server by demand.
- C. Configure daily automatic backups of logs to remote storage.
- D. Deploy log rotation procedures to manage the records.

Answer: A

Explanation:

A centralized log aggregation solution (such as Elasticsearch, Graylog, or Splunk) provides reliable and secure management of logs across multiple servers. It consolidates OS and application logs, simplifies analysis, and improves monitoring and security compared to on-demand retrieval, backups, or simple log rotation.

NEW QUESTION # 53

A systems administrator attempts to edit a file as root, but receives the following error:

```
E212: Cannot open file for writing
# ls -l /etc/resolv.conf
-rw-----. 1 root admin 141 May 30 11:00 /etc/resolv.conf
# lsattr /etc/resolv.conf
----i----- /etc/resolv.conf
```

Which of the following commands allows the administrator to edit the file?

- A. `chgrp root /etc/resolv.conf`
- B. `chown root /etc/resolv.conf`
- C. `chattr -i /etc/resolv.conf`
- D. `chmod 750 /etc/resolv.conf`

Answer: C

Explanation:

The `lsattr` output shows the immutable (i) attribute set on `/etc/resolv.conf`. This prevents any modifications, even by root. Running `chattr -i` removes the immutable flag, allowing the administrator to edit the file.

NEW QUESTION # 54

An administrator updates the network configuration on a server but wants to ensure the change will not cause an outage if something goes wrong. Which of the following commands allows the administrator to accomplish this goal?

- A. `netplan rebind`
- B. `netplan ip`
- C. `netplan try`
- D. `netplan apply`

Answer: C

Explanation:

`netplan try` applies the new network configuration temporarily and waits for user confirmation. If not confirmed, it automatically

reverts, preventing outages from misconfigurations.

NEW QUESTION # 55

Which of the following most accurately describes a webhook?

- A. An authentication method for web-server communication
- B. An SNMP-based API for network device monitoring
- C. A means to transmit sensitive information between systems
- **D. An HTTP-based callback function**

Answer: D

Explanation:

A webhook is an HTTP-based callback that allows one system to send real-time data or notifications to another system when an event occurs.

NEW QUESTION # 56

An administrator has generated an RSA SSH key pair to log in to a remote server. After copying the public key and attempting to log in, the administrator sees the following message:

```
admin@192.168.10.50: Permission denied (publickey,password)
```

After seeing the message, the administrator attempts to connect using `ssh -v admin@192.168.10.50` and notices the following debug output:

```
debug1: send_pubkey_test: no mutual signature algorithm
```

Which of the following actions should the administrator take first to remediate this issue?

- A. Set `PermitRootLogin yes` in the `/etc/ssh/sshd_config` file.
- **B. Create a new key pair by running `ssh-keygen -t ecdsa`.**
- C. Update permissions on the `/home/admin/.ssh` directory to 700 on the remote server.
- D. Issue `systemctl restart sshd` on the local server.

Answer: B

Explanation:

The "no mutual signature algorithm" error means the RSA/SHA-1 key type (`ssh-rsa`) isn't supported by both client and server. Generating a new key with a modern algorithm (e.g., `ssh-keygen -t ecdsa`) ensures a mutually supported signature method.

NEW QUESTION # 57

.....

If you want to make progress and mark your name in your circumstances, you should never boggle at difficulties. As far as we know, many customers are depressed by the exam ahead of them, afraid of they may fail it unexpectedly. Our XK0-006 exam tool has three versions for you to choose, PDF, App, and software. If you have any question or hesitate, you can download our free Demo. The Demo will show you part of the content of our XK0-006 Study Materials real exam materials. So you do not have to worry about the quality of our exam questions. Our XK0-006 exam tool have been trusted and purchased by thousands of candidates. What are you waiting for?
