

C-TS422-2023인기자격증 시험덤프자료 -높은통과율 SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing퍼펙트최신버전공부자료 덤프로 시험에패스하여자격증취득하기

그 외, ExamPassdump C-TS422-2023 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1tt1aI5x11hSuDihmcb8w7vTm7axw3iCU>

국제공인자격증을 취득하여 IT업계에서 자신만의 자리를 잡고 싶으신가요? 자격증이 수없이 많은데 SAP C-TS422-2023 시험패스부터 시작해보실가요? 100%합격가능한 SAP C-TS422-2023덤프는 SAP C-TS422-2023 시험문제의 기출문제와 예상문제로 되어있는 퍼펙트한 모음문제집으로서 시험패스율이 100%에 가깝습니다.

SAP C-TS422-2023 시험요강:

주제	소개
주제 1	- Material Requirements Planning in SAP S 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
주제 2	- Capacity Planning in SAP S 4HANA: This section covers a discussion of SAP S 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
주제 3	- Master Data in SAP S 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
주제 4	- Lean Manufacturing in SAP S 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
주제 5	- Advanced Planning in SAP S 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.
주제 6	- Introduction to SAP S 4HANA Supply Chain Planning: This part covers the background and motivation for SAP S 4HANA, its main components, business applications, and user experience strategy.

주제 7	• Production Orders in SAP S • 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
주제 8	• Process Orders in SAP S • 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
주제 9	• Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.
주제 10	• Demand Management in SAP S • 4HANA: This section covers a comparison of production methods in various manufacturing environments.

C-TS422-2023퍼펙트 최신버전 공부자료 - C-TS422-2023시험응시

ExamPassdump의SAP C-TS422-2023덤프는 레알시험의 모든 유형을 포함하고 있습니다.객관식은 물론 드래그앤드랍,시뮬문제등 실제시험문제의 모든 유형을 포함하고 있습니다. SAP C-TS422-2023덤프의 문제와 답은 모두 엘리트한 인증강사 및 전문가들에 의하여 만들어져SAP C-TS422-2023 시험응시용만이 아닌 학습자료용으로도 손색이 없는 덤프입니다.저희 착한SAP C-TS422-2023덤프 데려가세용~!

최신 SAP Certified Application Specialist C-TS422-2023 무료샘플문제 (Q23-Q28):

질문 # 23

What determines whether the planned independent requirements in dem management are consumed by other requirements? Note: There are 2 correct answers to this question.

- A. Requirements type
- B. Requirements profile
- C. Planning strategy
- D. Order type

정답: A,C

질문 # 24

How can a material availability check be triggered automatically for a production order?

Note: There are 2 correct answers to this question.

- A. By order confirmation
- B. By mass processing
- C. By capacity planning
- D. By order release

정답: B,D

설명:

A material availability check can be triggered automatically for a production order by the following methods:

By mass processing: You can use the mass processing function to execute material availability checks for multiple production orders at once. You can use the Manage Production Orders app or the transaction COHV to perform mass processing. You can define the selection criteria and the scope of check for the orders to be checked. The system updates the availability status and the committed quantities for the checked orders.

By order release: You can configure the system to trigger a material availability check automatically when a production order is released. You can use the Customizing activity Define Checking Control to define the checking rule and the scope of check for the

order release. The system updates the availability status and the committed quantities for the released order. Reference: Executing Material Availability Checks; [SAP S/4HANA Production Planning and Manufacturing Certification Guide], page 83.

질문 # 25

You have maintained the parameters for simple discontinuation in the material master of a component. Which business process will be affected if the available stock is zero and the discontinuation date is in the past?

- A. Backflushing
- **B. Material requirements planning**
- C. Production order release
- D. Kanban

정답: B

설명:

If the available stock is zero and the discontinuation date is in the past, the material requirements planning (MRP) process will be affected. MRP will not create any planned orders or purchase requisitions for the discontinued component. Instead, it will create a discontinuation indicator in the MRP list and a discontinuation message in the exception message list. This will inform the planner that the component is no longer available and that a follow-up material should be used instead. Reference: [SAP Help Portal] - Discontinuation of Materials.

질문 # 26

Your project uses process orders for the production of liquid chemicals. What can you define to ensure that production flow only happens in suitable and physically connected tanks? Note: There are 2 correct answers to this question.

- A. Resource hierarchy
- **B. Resource selection**
- **C. Resource network**
- D. Resource matrix

정답: B,C

설명:

A resource network is a business object in PP/DS that defines the allowed directed connections between two or more resources. A directed connection means that the connection from Resource 1 to Resource 2 is not the same as the inverse connection from Resource 2 to Resource 1. You use this object to model existing production constraints more precisely, with the objective of creating a finite and technically feasible production schedule. Resource networks simplify the modeling of resource restrictions for consecutive operations or orders¹ A resource selection is a business object in PP/DS that defines the criteria for selecting a suitable resource for an operation or an order. You use this object to specify the characteristics, attributes, and capacities of the resources that can be used for a particular production process. Resource selection allows you to optimize the resource utilization and reduce the setup times and costs² A resource matrix is a business object in PP/DS that defines the relationships between different resources based on their characteristics and attributes. You use this object to determine the setup times and costs for changing from one resource to another. Resource matrix allows you to model the setup effort and expense more accurately and improve the production efficiency³ A resource hierarchy is a business object in PP/DS that defines the structure and sequence of resources that are used for a production process. You use this object to represent the logical and physical dependencies of the resources and to control the scheduling and sequencing of the operations or orders. Resource hierarchy allows you to model the production flow and capacity more realistically and ensure the technical feasibility of the production plan.

질문 # 27

In documentation for MRP in Advanced Planning you read that new orders are created through infinite planning. What does this mean for the capacity requirements of a new order?

- 정답: B**
