AWS Certified Developer Associate Exam (DVA-C02) certification validates an individual's expertise in developing and maintaining applications on the AWS platform, making them highly sought after in the IT industry. Candidates who pass the AWS-Developer Certification Exam can expect to have a competitive edge in the job market and advance their careers in AWS development.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q369-Q374):

NEW QUESTION # 369

Company B is launching a new game app for mobile devices. Users will log into the game using their existing social media account to streamline data capture. Company B would like to directly save player data and scoring information from the mobile app to a DynamoDB table named Score Data. When a user saves their game the progress data will be stored to the Game state S3 bucket. What is the best approach for storing data to DynamoDB and S3?

- A. Use Login with Amazon allowing users to sign in with an Amazon account providing the mobile app with access to the Score Data DynamoDB table and the Game State S3 bucket.
- **B. Use temporary security credentials that assume a role providing access to the Score Data DynamoDB table and the Game State S3 bucket using web identity federation**
- C. Use an IAM user with access credentials assigned a role providing access to the Score Data DynamoDB table and the Game State S3 bucket for distribution with the mobile app.
- D. Use an EC2 Instance that is launched with an EC2 role providing access to the Score Data DynamoDB table and the Game State S3 bucket that communicates with the mobile app via web services.

Answer: B

NEW QUESTION # 370

A developer is preparing a deployment package using AWS Cloud Formation. The package consists of two separate templates: one for the infrastructure and one for the application. The application has to be inside the VPC that is created from the infrastructure template. How can the application stack refer to the VPC created from the infrastructure template?

- A. Use the DependsOn attribute to specify that the application instance depends on the VPC in the application template.
- B. Use the Fn::GetAtt function to include the attribute of the VPC in the application template.
- **C. Use the Ref function to import the VPC into the application stack from the infrastructure template**
- D. Use the export flag in the infrastructure template, and then use the Fn::ImportValue function in the application template

Answer: C

NEW QUESTION # 371

Which of the following are valid arguments for an SNS Publish request? Choose 3 answers

- **A. TopicArn**
- B. Destination
- C. Format
- **D. Subject**
- E. Language
- **F. Message**

Answer: A,D,F

Explanation:

https://docs.aws.amazon.com/sns/latest/api/API_Publish.html

Message

MessageAttributes

MessageStructure

PhoneNumber

Subject

TargetArn

TopicArn

NEW QUESTION # 372

An application uses an Amazon EC2 Auto Scaling group. A developer notices that EC2 instances are taking a long time to become available during scale-out events. The UserData script is taking a long time to run.

The developer must implement a solution to decrease the time that elapses before an EC2 instance becomes available. The solution must make the most recent version of the application available at all times and must apply all available security updates. The solution also must minimize the number of images that are created.

The images must be validated.

Which combination of steps should the developer take to meet these requirements? (Choose two.)

- **A. Use EC2 Image Builder to create an Amazon Machine Image (AMI). Install the latest version of the application and all the patches and agents that are needed to manage and run the application. Update the Auto Scaling group launch configuration to use the AMI.**

- B. Remove any commands that perform operating system patching from the UserData script.
- C. Set up AWS CodeDeploy to deploy the most recent version of the application at runtime.
- D. Set up AWS CodePipeline to deploy the most recent version of the application at runtime.
- E. Use EC2 Image Builder to create an Amazon Machine Image (AMI). Install all the patches and agents that are needed to manage and run the application. Update the Auto Scaling group launch configuration to use the AMI.

Answer: A,E

NEW QUESTION # 373

A Developer has been asked to create an AWS Lambda function that is triggered any time updates are made to items in an Amazon DynamoDB table. The function has been created, and appropriate permissions have been added to the Lambda execution role. Amazon DynamoDB streams have been enabled for the table, but the function is still not being triggered. Which option would enable DynamoDB table updates to trigger the Lambda function?

- A. Configure event source mapping for the Lambda function
- B. increase the maximum execution time (timeout) setting of the Lambda function
- C. Change the StreamViewType parameter value to NEW_AND_OLD_IMAGES for the DynamoDB table
- D. Map an Amazon SNS topic to the DynamoDB streams

Answer: A

Explanation:

Explanation

https://docs.aws.amazon.com/en_us/amazondynamodb/latest/developerguide/Streams.Lambda.Tutorial.html Create an event source mapping to tell Lambda to send records from your stream to a Lambda function. You can create multiple event source mappings to process the same data with multiple Lambda functions, or process items from multiple streams with a single function.
