CDCP - Latest Exam Certified Data Centre Professional (CDCP) Tutorials

With so many online resources, knowing where to start when preparing for an Certified Data Centre Professional (CDCP) (CDCP) exam can be tough. But with Certified Data Centre Professional (CDCP) (CDCP) practice test, you can be confident you're getting the best possible CDCP exam dumps. Dumpcollection exam simulator mirrors the CDCP Exam-taking experience, so you know what to expect on CDCP exam day. Plus, with our wide range of EXIN CDCP exam questions types and difficulty levels, you can tailor your CDCP exam practice to your needs.

We try our best to provide the most efficient and intuitive CDCP learning materials to the learners and help them learn efficiently. Our CDCP exam reference provides the instances, simulation and diagrams to the clients so as to they can understand them intuitively. Based on the consideration that there are some hard-to-understand contents we insert the instances to our CDCP Test Guide to concretely demonstrate the knowledge points and the diagrams to let the clients understand the inner relationship and structure of the CDCP knowledge points.

Pass CDCP Exam with Updated Exam CDCP Tutorials by Dumpcollection

You final purpose is to get the CDCP certificate. So it is important to choose good study materials. In fact, our aim is the same with you. Our CDCP study materials have strong strengths to help you pass the exam. Maybe you still have doubts about our CDCP exam materials. We have statistics to prove the truth. First of all, our sales volumes are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our CDCP Practice Exam.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q60-Q65):

NEW QUESTION # 60
Which type of Humidifier is composed of water-filled canister containing electrodes?

- A. Water Canister Humidifier
- B. Ultrasonic Humidifier
- C. Steam Canister Humidifier
- D. Infrared Humidifiers

Answer: C

Explanation:
A steam canister humidifier is a type of humidifier that uses electricity to heat water in a canister containing electrodes. The water conductivity and the water level determine the amount of current and steam production.
The steam canister humidifier is also known as an electrode boiler humidifier or an electrode steam humidifier123.
References: 1: EPI Data Centre Professional (CDCP) Reference Materials, page 192: Electrode and resistive type humidifiers compared | steamovap technologies inc3: Know-How | Electrode Steam Humidifier - Condair Group.

NEW QUESTION # 61
What is the most preferred unit of measure for cooling capacity?

- A. Watt
- B. BTU
- C. Horsepower
- D. Ton

Answer: A

Explanation:
Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.
Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

NEW QUESTION # 62
An optical fiber cable comes with the specifications 50/125 um.
What do the numbers represent?

- A. The first number represents the diameter of the core; the second number represents the actual diameter cable including the buffer and jacket.
- B. The first number represents the required distance to single-phase power cabling; the second number represents the required distance to three-phase cabling.
- C. The first number represents the diameter of the core; the second number represents the diameter of the cladding in microns.
- D. The first number represents the distance for a 10 Gb/s connection; the second number represents the distance for a 1 Gb/s connection.

Answer: C

Explanation:
Optical fiber cables are composed of a core, a cladding, and a coating. The core is the central part of the fiber that carries the light signal. The cladding is the layer surrounding the core that reflects the light back into the core and prevents signal loss. The coating is the protective layer that covers the cladding and provides mechanical strength and environmental protection. The specifications of an optical fiber cable indicate the dimensions of the core and the cladding in microns (m), which are one millionth of a meter. For example, a

50/125 m cable has a core diameter of 50 m and a cladding diameter of 125 m. The coating diameter is usually 250 m, but it is not part of the specifications.

NEW QUESTION # 63
Which one of the following is the last stage in Stages of Combustion?

- A. Intense Heat
- B. Flaming Fire
- C. Incipient
- D. Visible Smoke

Answer: B

Explanation:
The last stage in stages of combustion is flaming fire, which occurs when the fuel vapors and oxygen are mixed in the right proportion and ignited by a flame or a spark. Flaming fire is characterized by visible flames, intense heat, and rapid oxidation. Flaming fire can cause severe damage to the data center equipment, personnel, and business continuity. Therefore, it is important to prevent or suppress flaming fire as soon as possible using appropriate fire detection and suppression systems.

NEW QUESTION # 64
The expected time to Recover/Repair from a system from a failure is defined as.

- A. MTBF
- B. MLBF
- C. MTTR
- D. MCBF

Answer: C

Explanation:
The expected time to recover or repair from a system from a failure is defined as MTTR (mean time to recovery or mean time to repair). MTTR is the average time it takes to restore a system or product to its normal operation after a failure. MTTR includes the time spent on detecting, diagnosing, and fixing the problem. MTTR is an important metric for measuring the reliability and availability of a system or product, as well as the efficiency and effectiveness of the incident management process. A lower MTTR indicates a faster and more reliable recovery or repair process.
