

Highly-demanded Archer-Expert Exam Braindumps demonstrate excellent Learning Questions - Exams4sures

DOWNLOAD the newest Exams4sures Archer-Expert PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=173yRUd95heUJU-aW2wUDQQP-bouzCFnf>

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the Archer-Expert study materials to clients and help they pass the test Archer-Expert certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our Archer-Expert Study Materials are recognized as the most representative and advanced study materials among the same kinds of products.

Archer Archer-Expert Exam Syllabus Topics:

Section	Objectives
Topic 1: Archer Platform Architecture and Advanced Deployment	- Review System Requirements and Installation Best Practices - Understand the Archer Platform Architecture and Components - Advanced Deployment and Configuration Considerations - Configure and Troubleshoot Advanced Data Feeds (e.g., API integrations, custom data sources)
Topic 2: Integration, Data Management, and Migration	- Perform Solution Packaging, Migration, and Version Management - Implement Advanced Data Import/Export Strategies - Understand and Leverage Archer API and Web Services for Custom Integrations - Manage Complex User and Group Structures, including Directory Integration (LDAP/AD)
Topic 3: Advanced System Administration and Security	- Configure Global and Application-Specific Advanced Settings - Utilize Advanced Data Governance Features (e.g., Archiving, Data Retention, Global Fields) - Implement Advanced Security Management (ACLs, Record Permissions, Security Parameters) - Configure Sophisticated Layouts, Views, Dashboards, and Reports
Topic 4: Complex Application Configuration and Design	- Manage Advanced Relationships and Data Modeling - Develop Advanced Calculated Fields and Dynamic Notifications - Design and Implement Multi-Stage Workflows and Advanced Data-Driven Events - Master Advanced Functionality of Questionnaires and Assessments

Topic 5: Troubleshooting, Performance Optimization, and Best Practices

- Analyze System Logs and Monitor Health for Issue Resolution
- Troubleshoot Common and Advanced Archer Issues
- Implement Performance Tuning Strategies for Archer Applications and Database
- Apply Archer Best Practices for System Design, Maintenance, and Scalability

New Archer Archer-Expert Dumps Pdf & Archer-Expert Frequent Updates

By taking a Archer-Expert practice exam, you can find out what you're good at. Archer-Expert exam preparation software is the best way to prepare for your Archer-Expert certification exam. With the Archer-Expert list of questions, you can brush up on your skills and knowledge. With Exams4sure, you'll access a lot of Archer-Expert Practice Questions, detailed explanations, and personalized feedback. And because it's all online, you can study anywhere, anytime. The Archer Certified Administrator-Expert (Archer-Expert) practice exam consists of questions from a pool of questions.

Archer Certified Administrator-Expert Sample Questions (Q12-Q17):

NEW QUESTION # 12

What will happen if the source file for a Data Import contains a row missing required field content for the target application?

- A. The Data Import fails unless the row with the missing required field content is the last row in the file.
- **B. The Data Import fails without creating or updating any content records.**
- C. The Data Import logs a warning message asking the user to check the source file and processes successfully for the rest of the complete rows.
- D. An administrator must process the file using administrator override.

Answer: B

Explanation:

The Data Import tool is designed for strict adherence to application business rules. According to the Archer Administration II curriculum, required fields are mandatory for the creation of any record. If a source file contains even a single row that is missing data for a "Required" field, the validation engine will trigger an error.

Unlike the Data Feed Manager, which can be configured to "Skip" errors and continue, a standard Data Import is an "all or nothing" operation by default when it encounters critical structural failures like missing required data. The import process will stop, and no records from that file will be committed to the database.

This ensures that the application does not end up with "broken" records that bypass the logic intended by the administrator. To fix this, the administrator must either populate the missing data in the source file or temporarily make the field "Not Required" in the application builder before re-attempting the import.

NEW QUESTION # 13

After a recent update to the Advanced Workflow diagram and On Demand Notification Templates, Kate is no longer receiving an email whenever a submitter assigns her as the Reviewer. In order to fix this, what should you validate first?

- **A. Verify that the On Demand Notification Template is configured correctly.**
- B. Verify that notifications are enabled for this application.
- C. Verify that notifications are enabled for this instance.
- D. Test the connection to the mail server within the Archer Control Panel.

Answer: A

Explanation:

When troubleshooting a failure in Advanced Workflow (AWF) notifications, the administrator should start at the most granular level of the recent change. Since the scenario mentions updates were made to the On Demand Notification Templates (ODNT), that is the most likely point of failure.

According to the Advanced Workflow Beyond the Basics curriculum, for an AWF notification to fire, the node in the workflow must be correctly mapped to an ODNT, and that template must have a valid Recipient (e.g., a field mapping or a specific user) and a "Status" of Active. If the template was accidentally set to Inactive or if the Recipient field mapping was broken during the update,

the email will never trigger. While Options A, B, and D are valid system-wide checks, they are less likely to be the cause if other notifications in the system are still working correctly; therefore, validating the specific template is the standard first step.

NEW QUESTION # 14

Which service must be installed and enabled on all Web and Services Servers?

- A. Archer Workflow Service
- B. Archer Core Service
- C. Archer Configuration Service
- D. Archer Queuing Service

Answer: C

Explanation:

In a distributed (multi-host) Archer environment, the Archer Configuration Service is the most critical underlying component that must exist on every server in the web and services tiers. As taught in Archer Administration II, this service is responsible for "registering" the server with the Archer Control Panel (ACP).

The Configuration Service allows the central ACP to communicate with each node in the cluster to manage settings, update the nlog.config files, and ensure that all servers are using the correct database connection strings. While the Queuing Service (Option C) might only reside on the Services server, and the Workflow Service (Option B) is specific to AWF tasks, the Configuration Service is the "heartbeat" that connects any given Archer server to the instance's central management framework. If this service is stopped on a web server, that server will effectively become "orphaned" and will not be able to process user requests correctly or receive updates from the ACP.

NEW QUESTION # 15

If a valid global search returns no results, where is that logged?

- A. Data feed service log file
- B. Job framework log file
- C. Queuing service log file
- D. Configuration service log file

Answer: B

Explanation:

In the Archer architecture, search operations-particularly Global Search and Indexing -are handled by the Search service, which operates under the broader Job Framework. According to the Archer Installation and Troubleshooting guide, when a user executes a search that is technically "valid" (meaning the syntax is correct) but fails to return expected results or fails during execution, the details are captured in the Job Framework log files.

These logs provide insight into how the Search service is interacting with the Lucene indexes. If the index is corrupt or if the search query is timing out, the Job Framework logs (usually found in the \Logs directory on the Services server) will contain the specific stack traces or warnings. The Configuration Service (Option A) only logs system-level startup and ACP connectivity, and the Data Feed Service (Option D) is irrelevant to UI search queries. Reviewing the Job Framework logs is the standard first step for administrators when users report that "search isn't working" despite records clearly existing in the system.

NEW QUESTION # 16

Which of the following are automatically assigned by Archer when a new user is created?

- A. Username, default Security Parameter, and default Access Role
- B. Default Security Parameter and Default Access Role
- C. One time password, Default Email Address
- D. Default Access Role, Default Email Address

Answer: B

Explanation:

In the Manage Users section of Archer, the platform uses global defaults to ensure that new accounts are created with a baseline security posture. According to the Archer Administration II security module, every new user record is automatically assigned the

Default Security Parameter and the Default Access Role defined in the instance settings.

The Security Parameter (Option D) governs password complexity, expiration, and session timeouts. The Default Access Role typically provides very limited "Read" access to ensure the user can at least log in to the workspace, but usually requires further administrative adjustment to grant functional permissions. A Username (Option A) must be manually entered or mapped from LDAP; Archer cannot guess a unique username. Similarly, email addresses and passwords require specific input or integration triggers. By automatically assigning the default Security Parameter and Access Role, Archer ensures that no user is created without essential security governance already in place.

NEW QUESTION # 17

.....

The importance of learning is well known, and everyone is struggling for their ideals, working like a busy bee. We keep learning and making progress so that we can live the life we want. Our Archer-Expert practice test materials help users to pass qualifying examination to obtain a Archer-Expert qualification certificate are a way to pursue a better life. If you are a person who is looking forward to a good future and is demanding of yourself, then join the army of learning to pass the Archer-Expert Exam. Choosing our Archer-Expert test question will definitely bring you many unexpected results!
