Our 350-501 exam questions are high quality and efficiency test tools. The knowledge in our Implementing and Operating Cisco Service Provider Network Core Technologies torrent prep is very comprehensive because our experts in various fields will also update dates in time to ensure quality, you can get latest materials within one year after you purchase. What's more, you can learn our 350-501 Test Guide whether you are at home or outside. Based on the concept of service and in order to help every study succeed, we have a good reputation and security system to protect our customer's information.

Three different formats of 350-501 exam study material are available at Pass4sureCert. These formats include 350-501 dumps PDF files, desktop Cisco 350-501 practice exam software, and a web-based 350-501 practice test. Professionals have designed the product according to the most recent syllabus of the 350-501 test in mind. Let's find out the prominent features of these latest Cisco 350-501 exam questions format.

Cisco - 350-501 - Implementing and Operating Cisco Service Provider Network Core Technologies High Hit-Rate Reliable Exam Test

Now, if you use 350-501 preparation materials, you only need to learn twenty to thirty hours to go to the exam. And, you will have a 99% chance to pass the exam. Of course, you don't have to buy any other study materials. 350-501 exam questions can satisfy all your learning needs. During this time, you must really be learning. If you just put 350-501 Real Exam in front of them and didn't look at them, then we have no way. 350-501 exam questions want to work with you to help you achieve your dreams.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q221-Q226):

NEW QUESTION # 221

Refer to the exhibit.

A network engineer is configuring MPLS LDP synchronization on router R1. Which additional configuration must an engineer apply to R1 so that it will synchronize to OSPF process 1?

- A. Option B
- B. Option A
- C. Option C
- D. Option D

Answer: C

Explanation:

The correct configuration for MPLS LDP synchronization with OSPF process 1 on router R1 is to use the command `mpls ldp igp sync holddown 60` under the OSPF process configuration. This ensures that the MPLS LDP synchronization is enabled and held for 60 seconds with OSPF process 1, which helps prevent black holes in MPLS networks during the convergence process by ensuring that routes are not advertised until LDP is fully operational and labels have been exchanged between adjacent routers.

NEW QUESTION # 222

Refer to the exhibit.

□ An engineer has started to configure a router for OSPF, as shown Which configuration must an engineer apply on the network so that area 15 traffic from R5 to R1 will prefer the route through R4?

- A. Place the link between R3 and R5 in a stub area to force traffic to use the route through R4.
- B. Implement a sham link on the between R3 and R2 to extend area 0 area 15.
- C. Increase the cost on the link between R2 and R4, to influence the path over R3 and R4.
- **D. Implement a multiarea adjacency on the link between R2 and R4, with the cost manipulated to make the path through R4 preferred.**

Answer: D

Explanation:

In the given scenario, to ensure that area 15 traffic from R5 to R1 prefers the route through R4, a multiarea adjacency should be implemented on the link between R2 and R4. The cost can be manipulated to make this path preferred. Multiarea adjacency allows OSPF routers to form adjacencies with routers in other areas, enabling more direct routing of traffic. By adjusting the cost of this adjacency, traffic can be directed preferentially through specific paths.

NEW QUESTION # 223

□ Refer to the exhibit. R1 has two upstream Tier 1 service providers. BGP is in use as the exterior routing protocol, and ISP_A and ISP_B are sending the full BGP table. A network engineer must assign local- preference 70 to all routes with multiple exit discriminator 30. Which configuration must the network engineer apply?

- A. Option B
- B. Option A
- **C. Option C**
- D. Option D

Answer: C

Explanation:

The configuration in Option C uses a route policy that checks if the MED is equal to 30 and then sets the local- preference to 70. This aligns with the requirement to prioritize routes with a MED of 30 by assigning them a higher local-preference value, which influences the BGP path selection process in favor of these routes.

References ⇒ The Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course provides insights into configuring route policies for BGP, which includes setting local-preference based on MED values

NEW QUESTION # 224

Which statement about Network Services Orchestrator (NSO) is true?

- A. It can be used only with XML coding
- B. It must use SDN as an overlay for addressing
- **C. It uses YANG modeling language to automate devices**
- D. It is used only in service provider environments

Answer: C

NEW QUESTION # 225

What do Chef and Puppet have in common?

- A. use Ruby
- B. require modules to be created from scratch
- C. use a master server
- D. manage agents referred to as minions

Answer: C

Explanation:

Both Chef and Puppet are configuration management platforms that aim to configure and manage servers and other IT infrastructure. They operate in the same infrastructure management space and share several similarities:

Use a master-client architecture: Chef functions with a master-client architecture, where the server runs on the master machine, and the client runs as an agent on every client machine. Similarly, Puppet follows a similar setup.

Manage devices or nodes to be configured: Both Chef and Puppet manage the configuration of devices or nodes within an infrastructure.

Leverage a pull model: Both tools use a pull model, where the configuration is pulled from a central server to the managed nodes.

NEW QUESTION # 226
