Utilizing 010-160 Latest Exam Vce - No Worry About Linux Essentials Certificate Exam - version 1.6

I think these smart tips will help you to study well for the exam and get a brilliant score without any confusion. To get the Linux Essentials Certificate Exam - version 1.6 010-160 practice test, find a reliable source that provides the 010-160 Exam Dumps to their clients. Linux Essentials Certificate Exam - version 1.6 010-160 certification exams are not easy but quite tricky to know whether the applicant has complete knowledge regarding the subject or not.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q78-Q83):

NEW QUESTION # 78

What is the purpose of the PATH environment variable?

- A. It increases security by preventing commands from running in certain locations.
- B. It specifies the location of a user's home directory.
- C. It indicates the location of the default shell to be used when a user logs in.
- **D. It allows the execution of commands without the need to know the location of the executable.**
- E. It contains the absolute path to the current directory.

Answer: D

Explanation:
Explanation

The PATH environment variable is a special variable that contains a list of directories that the system searches when looking for a command to execute¹². The purpose of the PATH variable is to make it easier and faster for users to run commands without having to type the full path to the executable file. For example, if you want to run the ls command, which is located in the /bin directory, you don't have to type /bin/ls every time. You can just type ls, and the system will find the executable file in the /bin directory, which is one of the directories in the PATH variable. The PATH variable can be viewed with the echo command¹²:

```
$ echo $PATH
```

The PATH variable can also be modified by adding or removing directories, either temporarily or permanently, depending on the user's needs¹². For example, if you have a custom script or program in your home directory, and you want to run it from anywhere, you can add your home directory to the PATH variable with the export command¹²:

```
$ export PATH=$PATH:~/myprogram
```

This will append your home directory to the end of the PATH variable, and the system will search it last when looking for a command. To make this change permanent, you need to edit a configuration file, such as ~/.bashrc or ~/.profile, and add the export command there¹².

NEW QUESTION # 79

Which of the following keys can be pressed to exit less?

- A. q
- B. e
- C. !
- D. 0
- E. x

Answer: A

NEW QUESTION # 80

Why are web browser cookies considered dangerous?

- A. Cookies are always public and accessible to anyone on the internet.
- B. Cookies store critical data which is lost when a cookie is deleted.
- C. Cookies consume significant amounts of storage and can exhaust disk space.
- D. Cookies support identification and tracking of users.
- E. Cookies can contain and execute viruses and malware.

Answer: D

Explanation:

Web browser cookies are small pieces of data that are stored by a website on a user's browser. They are used to remember information about the user, such as preferences, login details, shopping cart items, etc. Cookies can also be used to identify and track users across different websites, which can have implications for privacy and security. For example, cookies can be used to show targeted ads based on the user's browsing history, or to collect personal information without the user's consent. Cookies are not inherently dangerous, but they can pose some risks if they are misused or compromised by malicious actors. Reference:

NEW QUESTION # 81

Reverse DNS assigns hostnames to IP addresses. How is the name of the IP address 198.51.100.165 stored on a DNS server?

- A. In the ARPA record for 165.100.51.198.rev.
- B. In the REV record for arpa.in-addr.198.51.100.165.
- C. In the PTR record for 165.100.51.198.in-addr.arpa.
- D. In the RNAME record for 198-51-100-165.rev.arpa.
- E. In the A record for 165.100.51.198.ipv4.arpa.

Answer: C

NEW QUESTION # 82

Which of the following types of bus can connect hard disk drives with the motherboard?

- A. The RAM bus
- B. The CPU bus
- **C. The SATA bus**
- D. The NUMA bus
- E. The Auto bus

Answer: C

Explanation:

Explanation

A bus is a communication system that transfers data between components inside a computer or between computers. There are different types of buses that serve different purposes. The RAM bus connects the CPU with the main memory, the NUMA bus connects multiple processors in a multiprocessor system, the CPU bus connects the CPU with other components on the motherboard, and the Auto bus is a fictional bus that can transform into a robot. The SATA bus is the correct answer because it is a type of bus that can connect hard disk drives with the motherboard. SATA stands for Serial Advanced Technology Attachment and it is a standard interface for connecting storage devices such as hard disk drives, solid state drives, and optical drives.

SATA offers faster data transfer rates, lower power consumption, and improved cable management compared to older interfaces such as IDE and SCSI. References: : [Bus (computing)] : [Transformers: Robots in Disguise (2015 TV series)] : [Serial ATA]3) : [SATA vs. IDE: What's the Difference?]

NEW QUESTION # 83

.....

It is well known that the best way to improve your competitive advantages in this modern world is to have the 010-160 certification, such as graduation from a first-tier university, fruitful experience in a well-known international company, or even possession of some globally recognized 010-160 certifications, which can totally help you highlight your resume and get a promotion in your workplace to a large extent.
